AQUABAR

WEATHERPROOFING

OUTSIDE WALLS WITHOUT CHANGING THE TEXTURE OR COLOR OF THE SURFACE UPON WHICH OUR MATERIAL IS APPLIED.

No. 2

COLORLESS TRANSPARENT LIQUID

For waterproofing and dampproofing outside walls of brick, stone, marble, terra cotta, cement, stucco or wood by surface application. This material is colorless, transparent, invisible and odorless and is a water repelling liquid that does not discolor any surface to which it is applied. It penetrates the surface from ⅛ to ¼ of an inch, filling and sealing the voids by crystallization and is, therefore, permanent.

The entire exterior walls, including the chimney, of the fine palatial residence of Mr. Samuel Rea, President of the Pennsylvania Railroad, at Ardmore was treated with this Product more than eight years ago and it is just as good today as the day it was finished.

For information on this operation, we would refer you to the Architects, Messrs. Furness-Evans & Co., who have, at the request of Mr. Rea, written us a beautiful testimonial.

As The Editor Sees It

JOINT CONFERENCE OF ENGINEERS, ARCHITECTS AND CONSTRUCTORS LAUNCH LONG-HOPED-FOR PLAN TO STANDARDIZE CONSTRUCTION CONTRACTS

THE standardization of construction contracts towards which all far-sighted men in the industry have been looking for the last twenty years seems destined to be achieved at last through the united efforts of a "conference held in Washington, D. C., recently.

This conference was composed of delegates appointed by eight national societies representing the engineer, architects and contractors of the United States, and the definite plan adopted was one which would ultimately produce a standard form of contract "agreement" which would be acceptable in all sections of the country and in all phases of this huge industry which now ranks second only to agriculture in national magnitude.

Every constructor and owner who has wrestled with the intricacies of a contract, or worried over the exact, yet doubtful meaning of its many complicated and legalized phrases, will approve this first attempt to frame in simple Anglo-Saxon words an equitable and universal document.

A survey of the situation made several months ago by Brigadier-general R. C. Marshall, Jr., formerly Chief of the Construction Division, U. S. Army, during the world war, disclosed the fact that today there are in common use throughout the construction industry, *over* 200 *different forms of contract,* and that no one state or section had yet been able to establish any one form as standard or customary.

Expert engineers at the headquarters of the Associated General Contractors of America in Washington, were then assigned to the task of analyzing these 200 different forms in order to discover whether the variety of "jobs" involved required any such variety of forms.

After many months of painstaking comparison and research, W. P. Christie, in charge of this work as research engineer for the Associated General Contractors reported that the differences were chiefly superficial differences of words and phraseing rather than differences of meaning or stipulations, and that at least two-thirds of all the provisions contained in each of the 200 documents were common to all documents, and therefor could be included *in one standard contract form,* if rewritten in simple universal style.

It was found that stipulations which were characteristic or peculiar to the building trades, or to the railroad construction field, or to waterwork projects, or to highways could be assembled together in one standard form, entitled "general conditions," applicable to that one field of construction only, and added to the standard agreement form as addenda.

In this way, it would be quite possible to draft a STANDARD CONTRACT which would cover all cases of construction work, no matter in what field, and the only alteration that would ever need to be made to it, would be in selecting the standard form of "General Conditions" which covered the type of job concerned. Experts believed that a half dozen such forms would cover the main subdivisions involved in the construction industry.

This plan together with a "tentative outline" was submitted for consideration to the—

American Association of State Highway Officials.
American Engineering Council.
American Institute of Architects.
American Railway Engineering Association.

Western Society of Engineers.

All made favorable responses and appointed representatives to come to Washington to constitute a confernce on the subject and proceed with the drafting of a tentative form of contract which could later be officially submitted by the conference to its constituting bodies for criticism, amendments, and ultimate ratification.

The conference met in the assembly room of the Department of Commerce building, in Washington, Dec. 15 and 16, and was addressed by Secretary of Commerce Hoover and General Marshall, both of whom expressed a very lively and sincere hope that the conference would ultimately devise a form which would become as standard in its field as the standard forms of bank checks, notes and mortgages are in the field of banking and commercial trade.

Secretary of Commerce Hoover, said, in opening the conference:

"Well, gentlemen, this conference is to consider whether something can be done to standardize or simplify or reinforce or generally improve the whole basis of contract forms used in the construction industry.

"I believe there is a great field there not only in protection to the public but in the general improvement of ethics in the industry itself. I don't profess to know much about it, but it is a matter that has not come under my purview for some years. I have been too much out of the engineering work for the last seven years to give much thought to it.

"I know that the time I was in engineering work, this whole variation and specification of the contract basis for construction work of all kinds was an outstanding sore, and I have been in hopes that it was possible to do something. It all comes in line with the things many of us are much concerned with, and that is fundamentally the elimination of waste, lost motion, improvement of business practices throughout the whole United States.

"We have to remember that we have now an enlarged and inflated cost of distribution primarily, rather than production, and that we have a disparity due to the fundamentals of the increase in Federal taxation and railway rates that are making a wider margin between production and final distribution costs than we have ever had to face before, and unless we can crowd tha margin down somewhat by just sheer increase in efficiency, we are not going to be able to hold up the standard of living in this country and hold up our competitive position outside. So this is one of those things that ramify in many directions.

"I now therefore leave it to you, and we are glad to have you come to this Department, because we have started a definite program along all these lines, not from a point of view of trying to compel anybody to do anything, but trying to mobilize all the different branches of industry for co-operative action, and while you can do much to get this thing straightened out, it is probable that the Department of Commerce could be of moral assistance to you in getting it over when you have once arrived at some conclusions, and we will be delighted to back up anything that you come to an agreement on, and I have been astonished at the desire of the different industries to effect these things in every direction and their willingness to co-operate with other industries to make the work of each individual industry effective.

"We had the case the other day of the simplification of certain manufactured articles. The great majority of the manufacturers were represented here, but claimed that some minority would not help. hey could not do anything without the assistance of other branches, and therefor, I called in both the wholesalers and retailers in those directions and asked them if they would co-operate, and they have co-operated so far as to almost set up a boycott against certain manufacturers because they would not fall into line with the great majority, and they did it purely out of national interest.

"Somebody somewhere has got to eliminate the waste in this whole situation. I only mention that as a point where this Department can be of help in getting the allegiance of the related industries and trades, and help you to get over some program of this kind.

"So that all I am doing is to give you our blessing and to tell you that the Department of Commerce is yours. Go to it. (Applause.)

"Now it is up to you, I think, and if there is anything in the Department by which we can be of help, statistical or otherwise, *do not hesitate to call on us.*"

The aim of the conference in beginning work on this difficult task was to achieve the following advantages for the entire construction industry and all its affiliations:

(1) Less expenditure and legal service.
(2) Less duplication of work in the professions.
(3) Elimination of disputes.
(4) Better safeguard for owners and increased public confidence.

Cross-section of a Barrett Specification Roof. Note the uniform distribution of Pitch between the layers of Felt.

Right Construction is *Half* the Roof—

STUDY the illustrations at the right. In these the successive steps in the building-up of a Barrett Specification Roof over concrete are graphically shown. The Barrett Specification describes in detail the manner in which the roof shall be laid, because *right construction is just as important as the use of right materials.*

The Barrett Specification Roof for flat- or nearly flat-roofed buildings, consists of several alternate layers of Specification Pitch and Specification Felt, with a surface covering of gravel or slag. These materials are used because 60 years' experience has proved—

—that no other bitumen has the weather-resisting properties of this high grade pitch;

—that no other kind of felt has the lasting tensile strength of this carefully selected felt;

—that no other surfacing material renders a roof so highly fire-resistant as gravel or slag which serves the further purpose of holding in place the extra-thick *poured* top coat of Barrett Specification Pitch.

The concrete roof-deck is heavily mopped with a uniform coating of Barrett Specification Pitch.

Right: Laying the Barrett Specification Tarred Felt on the pitch seal coat. Four plies with pitch in between are laid over the entire roof surface, each ply overlapping three-fourths of the preceding ply.

Left: Mopping on the Barrett Specification Pitch. Each layer of felt is hermetically sealed to the adjoining layer by the pitch waterproofing. In no spot do the layers touch each other.

Below: Pouring final coat of hot Barrett Specification Pitch and embedding thick wearing surface of gravel or slag after entire roof has received four plies of felt and pitch.

Have your roofing contract call for the 20- or 10-year Surety Bond Guaranty. This is issued free of charge through the U. S. Fidelity and Guaranty Company of Baltimore. Then you will be sure that Barrett Specification materials will be applied, in sufficient quantities and by proper methods. For all Barrett Specification Bonded Roofs are constructed under the watchful eye of an experienced Barrett inspector who is present on the job to see that the Specification is strictly complied with.

Before specifying or closing contract for a Barrett Specification Roof, be sure to read carefully all the stipulations in the Specification.

Full details regarding these Bonded Roofs and copies of The Barrett Specifications sent free on request.

Bridge, over Schuylkill River, between Royersford and Spring City, Montgomery County, Pa. Owners, Montgomery County, care of Horace W. Smedley, Norristown, Pa. Reinforced concrete, 3 span. Owners taking bids due January 16th at 11 A. M.

Pennsylvania Contracts Awarded

Foundations, Maiden Creek Boiler House, Cont. No. 12, Reading, Pa. Consulting engineer, Louis T. Klauder, Pennsylvania Building, Philadelphia. Chief engineer, Emil L. Neubling, Bureau of Water, Reading, Pa. Owners, City of Reading, Department of Parks and Public Property, Bureau of Water, D. E. Dampman, superintendent, Reading, Pa. Concrete, stone and steel, 99x54 feet, safety treads, Bond. Contract awarded to Bader Const. Co., Colonial Trust Building, Reading, Pa.

Factory, Annville, Pa., $41,000. Architect, Harvey Hauer, Lebanon, Pa. Owners, Greib Shoe Co., Annville, Pa. Brick slow burning 4 stories, 178x41 feet, slag roof, maple floors, rolled steel sash, fire doors, ornamental iron work. Contract awarded to D. L. Saylor, Annville, Pa. (Heating, electric work, elevator and plumbing reserved.)

Residence (alts.), Bywood, Pa., $3,500. Architect, Frank V. Nickels, 228 South Sydenham street, Philadelphia. Owner, Mrs. E. M. Merry, Bywood, Pa. Shingle roof, copper work, plastering, painting, glazing, pine floors, electric work. Contract awarded to George W. Wagoner, 274 South Twentieth street, Philadelphia.

Road Work, Pennsylvania. Owners, State of Pennsylvania, State Highway Department, care of Lewis S. Sadler, Commissioner, State Capitol, Harrisburg, Pa. Lackawanna County, Route 174, Fell and Greenfield Townships. Contract awarded to Continental Contracting Company, Baltimore, Md., $193,174.25.

Road Work, Pennsylvania. Owners, State of Pennsylvania, State Highway Department, care of Lewis S. Sadler, Commissioner, Capitol Buiidlng, Harrisburg, Pa. Clearfield-Indiana Counties, Route 262, Burnside, Montgomery and Banks Townships and Glen Campbell Borough. Contract awarded to Anderson Const. Co., Parnassus, Pa.

Store (alts.), 820 North Main street, Wilkes-Barre, Pa. Architect, H. A. Mauer, Coal Exchange Building, Wilkes-Barre, Pa. Owners, Engle Brothers, on premises. Steel work, plate glass, hardwood floors, electric light, tile work, rolled steel sash. Contract awarded to A. D. Thomas, Wilkes-Barre, Pa.

Residence (alts. and add.), Hazel street, Wilkes-Barre, Pa. Architects, Schroeder & Schmidt, Weitzenkorn Building, Wilkes-Barre. Owner, name withheld. Frame, 2 stories, 20x30 feet, shingle roof, oak floors, steam heat, electric light, plumbing, general interior work. Contract awarded to A. D. Thomas, Wilkes-Barre, Pa.

Church (alts.), Scranton, Pa. Architects, Morris & McHale, Mears Building, Scranton, Pa. Owners, Holy Rosary Church, Rev. N. J. McManus, Scranton, Pa. Art glass, exterior alterations, stucco work, electric light, stone steps. Contract awarded to Giblon & Perry Building Co., Scranton, Pa.

New Jersey Construction News

Ferry House and Wharf, Delaware River, Palmyra, N. J. Engineer, John Meigs, 1211 Walnut street, Philadelphia. Owners, Tacony & Palmyra Ferry Co., care of George T. Sale, Liberty Building. Timber, wood piles, frame, 2 stories. Plans in progress. Engineer will take bids in one month.

Woodoleum Flooring

You are safe when you buy a Woodoleum Floor.

You get an absolute and unqualified guarantee. You get a concern which is the pioneer in this line of floor coverings.

There is but one Woodoleum—accept no imitation.

Woodoleum Mfg. Co.
131 Arch Street, Philadelphia

FOR BETTER WORK
Specify
"MAGNA"
White Silica Sand

MAGNA is the whitest, sharpest and strongest Sand obtainable. It is clean and everlastingly white. It is graded from fine to coarse, with a very low percentage of voids, reducing Cement required about 20%.

Write for booklet.

BUILDING SUPPLIES
THE MAGNA SAND CO., LTD.
139 SOUTH THIRD STREET
PHILADELPHIA

Lomb. 3626 Swarthmore 502-J

Residence, Haddon Heights, N. J. Architect, Andrew C. Borzner, 717 Walnut street, Philadelphia. Owner, George F. Swackhamer, 616 Linden street, Camden, N. J. Hollow tile and stucco, 2½ stories, 28x37 feet, shingle roof, pine floors, hot water heating, electric lighting. Plans about completed. Owner will take bids in one week.

Lyceum, Moorestown, N. J. Architect, George I. Lovatt, 416 Walnut street, Philadelphia. Owners, Our Lady of Good Counsel Roman Catholic Church, Moorestown, N. J. Stone and brick, 2 stories. Preliminary plans in progress.

Hospital Building, Vineland, N. J. Architects, Stearns & Woodnutt, Stephen Girard Building, Philadelphia. Owners, Vineland Hospital Association, care of Judge R. P. Tuller, president, Vineland, N. J. Brick, 2 and 3 stories, will contain 50 beds. Architect drawing preliminary plans.

Residences (2), Woodstown, N. J. Architect, W. L. Custer, Law Building, Camden, N. J. Owners, J. P. & R. Leop, care of architect. Hollow tile and stucco, 2½ stories, 43x25 feet and 18x15 feet, tile roof, hardwood floors, hot water heating, electric lighting, tile work. Architect taking bids due January 9th. E. J. Kreitzburg, 1345 Arch street; H. Seagraves, Woodstown, N. J.; Arthur F. Hoffman, Pitman, N. J., and Heavner & Guthridge, Norristown, Pa., are figuring.

School (fire restoration and repairs), Walnut street, Woodbury, N. J. Architects, Bal-

linger & Co., Twelfth and Chestnut streets, Philadelphia. Owners, Board of Education, City of Woodbury, Walter B. Wooley, Woodbury, N. J. Brick work, carpentry, mill work, demolition, metal lath, plastering, painting, glazing, iron and steel work. Owners taking bids. H. John Homan, 34 South Seventeenth street, and F. B. Davis & Son Co., 240 North Sixteenth street, are figuring.

Fernwood Service Station, Fernwood, Mercer County, N. J. Architect, private plans. Owners, State of New Jersey, Highway Department, Division of Bridges and Structures, Broad Street Bank Building, Trenton, N. J. Brick and steel, 1 story, 406x100 feet, slag roof, cement and pine floors, rolled steel sash, rolled steel fire doors, Bond (heating, electric work separate bids). Lowest bidders: Austin Co., Bulletin Building, Philadelphia, $94,330; Hughes-Foulkrod Co., Commonwealth Building, Philadelphia, $99,340.

Garage and Service Building, Forty-first and Maple avenue, Merchantville, N. J. Architects, Lackey & Hettle, 509 Federal street, Camden, N .J. Owner, J. B. Moery, 283 North Thirty-fourth street, Camden, N. J. Brick, cut stone and steel, 1 story, 150x40 feet and 152x120 feet, slag roof, cement floors, hot water heat, electric light, metal lath, rolled steel sash, Bond, plate glass. Architects have received revised bids.

Miscellaneous Construction News

Church, Brunswick, Md. Architect, Frank R. Watson, 1211 Walnut street, Philadelphia. Owners, St. Mark's Parish Grace Episcopal Church, Brunswick, Md. Stone and steel, 2 stories and basement, 38x126 feet, slate roof, maple floors, metal lath, waterproofing, Bond, steam heating, electric lighting, demolition. Architect taking bids due January 18th. F. L. Hoover & Son, 1023 Cherry street, Philadelphia; Harry B. Funk, Brunswick, Md.; Chas. B. Korn, Brunswick, Md.; A. L. Beeble, Toms Brook, Va.; Roy W. Poole, Frederick, Md.; Arthur L. Smith & Co., 1130 Woodward Building, Washington, D. C., are figuring.

Hospital (add.), Winston-Salem, N. C. Architect, Charles Barton Keen, Bailey Building, Philadelphia. Owners, City Hospital, Winston-Salem, N. C. Hollow tile, brick facing, 3 stories and basement, 37x75 feet, slag roof, linoleum and composition floors, dumb waiter, tile and marble work, electric work, stone foundations (heating reserved). Heating engineers, Wiley & Wilson, Lynchburg, Va. Owners taking bids due January 18th. Deposit of $30.00 required for set of plans. Refund of $20.00. Certified check for $15,000 must accompany each bid. Deposit of $15.00 required for heating plans. Refund, $10.00. Certified check for $5,000 must accompany each bid. Complete list of bidders to date: W. H. Fetter Const. Co., Winston-Salem, N. C.; King Lumber Co., Charlottesville, N. C.; Lee Const. Corp., Richmond, Va.; Goode Const. Co., Charlotte, N. C.; J. A. Jones Const. Co., Charlotte, N. C.; J. L. Crause, Greensboro, N. C.; Gooch Williams Co., Norfalk, Va.; Dupont Eng. Co., Wilmington, Del.; North Eastern Const. Co., Charlotte, N. C., and Harwood & Moss, Newport News, Va., are figuring.

Manufacturing Building, Wilmington, Del., $50,000. Architect, private plans. Owners, Joseph Bancroft & Sons, Wilmington, Del. Brick and steel, 5 stories, 120x60 feet, slag roof, maple floors, hollow metal sash, ornamental iron work. Contract awarded to John E. Healey & Sons, Inc., 707 Tatnall street, Wilmington, Del.

(Continued from Page 4)

(5) An improved standard of construction service throughout the country.

Officers of the Conference were elected as follows:

Chairman, Onward Bates, of Chicago, representative of the Western Society of Engineers; vice-chairman, J. W. Cowper, of Buffalo, N. Y., representative of the Associated General Contractors. He served as chairman during the first session owing to Mr. Bates' sickness. Secretary, W. P. Christie, of Washington, D. C.

General R. C. Marshall, Jr., and William B. King, representing respectively the Associated General Contractors and the American Bar Association, were elected members of the conference. Other delegates were:

W. A. Rogers, of Chicago, substitute delegate for the Western Engineers; E. W. Reaugh, of Cleveland, for the Builder's Exchanges; A. P. Davis, for the Engineering Council, substituted by L. W. Wallace; J. Waldo Smith, of New York City, for the Waterworks' Associations; William S. Parker, of Boston, for the Architects; H. K. Bishop of Washington, for the Highway Officials; H. Eltinge Breed, for the Civil Engineers, substituted for by J. S. Langthorne; W. D. Faucette, for the Railway Engineers.

A course of procedure devised by General Marshall for the study and development of standard forms was unanimously adopted as the method of handling the job.

References were made to similar efforts which had been made by the American Engineering Standards Committee in setting standards for materials and methods of construction; also to work by the Engineering Council in drawing up standards for government contract work; and to the effort of the American Railway Engineering Association along the same line in their special field.

William S. Parker, of Boston, Mass., secretary of the American Institute of Architects, narrated the interesting experiences of their committees during the last twenty years in the attempt to promulgate a standard form of contract which would be universally accepted by architects and builders.

He said: "Our work started back in the very early 1900's and a committee worked for five or six years on what was eventually called the first edition of the American Institute Standard Documents. That document was not put into general use because it was badly planned in its physical arrangements and printed in tvpe not easily read, and was developed by architects with the view of protecting the interests of the owner only.

"In 1912 we realized that it wasn't accomplishing its purpose or justifying the time and expense put into it and took up a plan for revision under the chairmanship of Frank Miles Day of Philadelphia.

"Later we called a meeting of contractors, sub-contractors and architects and legal representatives on both sides, in Philadelphia, and both sides had their say as the document developed. That was completed and the second edition printed in 1914, but the Building Trades' Employers' Association in New York took exception to a few points, so we called a further conference in 1916 and issued our third edition in 1917. This edition is selling at the rate of 50,000 copies annually, and our Board of Directors has decided that we will not make any further changes for some years to come."

Mr. H. K. Bishop speaking for the highwaymen, described how the U. S. Bureau of Public Roads had enforced the standardization of contract forms, also the bond, proposal, specification and plans forms which were used in highway construction that involved federal aid.

He said: "In general we used the short form of contract covering only one or two pages, making all the specifications, which carry all of the standard clauses, a part of the contract. Even the sheets were of standard size and typography, and we went so far as to standardize the structures. Now you will find if you pick up specifications in one state you can't tell what state it is until you look on the title page. And we find that the counties are gradually following the states so that this standardization is extended not only to the forty-eight states of the Union but to most of their subdivisions. We have found that very much simplifies the work."

Mr. W. D. Faucette, of Norfolk, Va., chief engineer of the Seaboard Airline Railway, speaking of his experience as Chairman of the Committee on Reform of General Contract forms, described the "uniform general contract form" which the Association of Railway Engineering Association had adopted at its convention in 1913 and printed in its Manual. After stating that it was not obligatory upon the membership of his Association to use it but that it was generally considered a "guidepost" for engineers with railroad contracts to let, he said: "I sent out seventy-five letters to the principal railroads of the United States and Canada to ascertain the use and adaptation of this contract form. The predominating answer was that they were not using it verbatim but were using it constantly as a guide, and the legal departments themselves adjusted the phraseology as they saw fit."

J. Waldo Smith, chief engineer of the

New York Board of Water Supply, showed a sympathetic attitude for the hard-working contractor by explaining how the corporation counsel of any city was inclined to encumber the contract with all sorts of binding clauses so that there was never any opportunity for the contractor to "recover" under the contract for any particular hardship and that the principal hope and guarantee of the contractor on a public works job lay in the "reasonable rulings" of the chief engineer who acts as judge on disputed points

He said: "We are embarking on a very praiseworthy effort to simplify contracts. I presume to have eliminated any clauses which the legal profession insists on having put in and which we engineers and architects think are unfair. It seems to me you are starting out in the right way with this intention to create a frame work on which the substance can later be built. That will be a distinct help and tend to eliminate a great deal of trouble that we have had in the past."

W. A. Rogers, of Chicago, Ill., speaking for the Western Society of Engineers said: "I only wish Mr. Bates were here, for after many years experience as an engineer and later as a contractor, he has in recent years made his principal business a matter of arbitration. I am hopeful that this convention shal be a success, and I feel that what we have got to strive for is not a perfect document but the best one we can get. Thus we can improve it year after year."

E. W. Reaugh, President of the Reaugh Construction Company of Cleveland, Ohio, described the experiences of fellow contractors in Cleveland with the standard form already introduced there by the Institute of Architects, by saying: "We find out that some of our largest contractors in the City of Cleveland have never even heard of these standard documents, and when I last reported to the Builder's Exchange that our committee considered the sub-contractors had been well represented and the general contractors had been forgotten entirely in these documents, many of them wanted to know about the standard documents and a few got copies and have been looking them over since. One large contractor reported to us: 'When we go to the architects to sign up they just tear out this first part of the agreement and pay no attention to the balance. Other architects we go to, sign up the agreement and then substitute their own general conditions. Still others look through the general conditions and so on and mark them up and change them so you can hardly tell them when you get through with them. Thus we get a set of documents which you think you understand legally and when you go to your architect he wants to change something else. It means go to your attorney every time so that you know where you are at.'"

William B. King, legal expert on contract forms, said: "The principal things that it seems essential to me to do are first that the people who already have standardized forms should be recognized as being the proper people to discuss the special forms relating to their business; and second, that there should be an effort (after these discussions) to get together and agree as far as possible on a uniform wording of those different contract forms."

General Marshall then spoke briefly as follows: "I just want to make a plea for the construction industry for two or three minutes. Construction has always been looked upon in his country in its elements. It has not been looked on as an industry. It has been looked on as architects, as engineers, as general contractors as sub-contractors, as material manufacturers, as material units, as equipment manufacturers, equipment dealers, insurance men, and you can county many more.

"In thinking about this subject I naturally think about the time at the beginning of the war. There were some of us in the War Department who had to make quick progress, knowing that this construction work was necessary before soldiers could be drilled, munitions manufactured or distributed. Was there a construction industry that the nation could turn to in this crisis? There was none. Was there a standard contract that the nation could turn to? There was not, and there are 200 contracts over there in that box that you can have. That problem has been working in my mind since that time.

"Now the object today is, I believe, to do for the whole construction industry what the American Institute did for the building branch of it and surely the business conditions of all construction work are alike.

"The fact that these different things have been considered in their elements is one of the grave causes why the public looks upon construction as it does, as the most loosely co-ordinated business that the country has. No two of them think alike. The engineer does not think like the architect with respect to business conditions. Neither of them thinks like the contractor. We found at the beginning of the war that not only was this the case, but each mistrusted the other, and the attitude of the public was the same as that mistrust that you had of each other.

"That was the reason we got the newspaper notoriety we did get, why you got the reputation that culminated in what the Graham Committee said about profiteering and other things in connection with it. No set of men worked harder or accomplished more than the engineering, architects and contractors did all through the war, but because of that looseness of co-ordination and because there were 200 contracts where there ought to have been five or ten, and because you did not all talk the same language, although you were doing the same kind of work, you got that reputation.

"I believe there are many contract conditions that are common, that can be expressed in language carefully picked from contracts already existing, and if we can segregate these common conditions we will get a co-ordination between the professional and construction side, so that at least that much of it will be on the road to solution. This assemblage here is a plea for co-ordination in the construction industry."

The final session of the conference was devoted to a detailed study of clauses which could be approved for incorporation in the standard contract "agreement," the members voting on each topic separately until a definite list of topics had been made which seemed acceptable for universal use.

It was the concensus of opinion that such a universal document could be achieved, and its scope or length would have to be determined after prolonged consideration of each topic in detail.

It was also decided that sub-committees should later be appointed in each phase of the industry to draw up the standard form of "general conditions" (one for the railroads; one for the builders; etc.) which would complement the general "agreement" according to the nature of the job.

Thus the general principles of the universal contract were fixed, and a committee consisting of General Marshall for the constructors, W. S. Parker for the architects, and W. D. Faucette for the Railway Engineers, was appoined to write out the documents in tentative form for correction and approval by the conference at its next meeting in January, after which the forms will be transmitted officially to the various societies and organizations interested for further consideration and ultimate adoption.

Just before adjournment, the conference passed a resolution of appreciation and thanks to General Marshall for the great amount of work he had done in preparing the "tentative outline" and for his untiring efforts in aranging for conference action.

CEMENT ASSOCIATION BASES MEMBERSHIP ON QUALITY OF PRODUCT

At the final session of the Annaul Meeting of the Portland Cement Association, which was held last week at the Biltmore Hotel, New York, the Association's Constitution and By-Laws were amended so as to make membership in the Association "Contingent upon member's product meeting the Standard Specifications for Portland Cement adopted by the United States Government and the American Society for Testing Materials."

Engineers, architects, and contractors are familiar with the high standard of specifications governing cement manufacture and will herald this action as the greatest advance step ever taken by the industry.

Along with other scientific-educational-research activities, the Portland Cement Association is distinguished for its co-operative work with technical societies. This has been in the nature of contributing to the improvement of building materials, methods and standards in general, among these being building codes, but the Association has particularly been active in keeping standard requirements for portland cement on a high plane and in insuring its proper use by the consuming public.

The Association is not concerned with the commercial relations of its members to their patrons and while not undertaking to guarantee directly the quality of cement produced by its members, has very adroitly accomplished the same thing by adding to its Constitution and By-Laws the amendment above mentioned.

This action of the Portland Cement Association perhaps typifies its service to the public in a way that will be more readily grasped by people at large than any other one item of practice or policy under which it operates. President L. T. Sunderland of Kansas City, Mo., who was re-elected at the Annual Meeting, in commenting upon this amendment, says, "This only serves as a further protection to the cement buying public. Portland cement always has been a highly standardized product, but as varying degrees of skill have been displayed in so-called tests of cement made by people not thoroughly grounded in testing practice through lack of long and competent laboratory training, misleading resuults have often been announced. The public can now feel assured that if the cement is produced by a member of the Portland Cement Association, that fact is an added endorsement of quality and actual assurance that it will measure up to the accepted engineering standards, since otherwise membership in the Association would be thereby jeopardized."

Re-elected with President Sunderland were Richard Hardy, First Vice-President, Chattanooga, Tenn.; S. B. Newberry, Second Vice-President, 818 Engineers' Building, Cleveland Ohio; and F. W. Kelley Treasurer 126 State St., Albany, N. Y.

The following directors were also elected:

H. Struckmann, 342 Madison Avenue, New York, N. Y.; Charles F. Conn, 603 Pennsylvania Building, Philadelphia, Pa., H. L. Block, Post Dispatch Building, St. Louis, Mo.; W. M. Hatch, Union City, Michigan; Geo. T. Cameron, Crocker Building, San Francisco, Calif.; and David M. Kirk, Wampum, Pa.

The greatest building activity in this country next year will be in the industrial states, according to a forecast of the building outlook made today by the Committee on Statistics and Standards of the Chamber of Commerce of the United States.

It is pointed out by the Committee that there will be a good many business buildings next year, and a large number of them will be in the shape of alterations and enlargements. On the other hand, it says, it is unfortnuate that not a great many farm buildings, such as dwelling houses, barns, cribs and the like are contemplated.

According to the Committee, California leads the other states with respect to probable construction, while good likelihoods of construction lie in the Central West and in the East.

"There, also, are a great many possibilities for building in the Southern States," it says. "These possibilities are greater than seemed likely under the stringent conditions which prevailed there prior to the rise in the price of cotton.

"The prospects for building in the strictly agricultural states are not so favorable. There are several reasons for this, principally the exceedingly low and unremunerative prices on farm products, which seriously reduce the purchasing power of the farmer. In addition, the banks generally throughout the agricultural sections are fully loaned up, so that the farmer finds it difficult to obtain either ready money or credit. In such circumstances there is not likely to be much building in these states, especially on farms, for the simple reason that the farmer is financially unable to build.

"Three factors enter largely into the problem of building during the coming months: the high price of material, high price of labor and the question of obtaining funds for construction. Prices of material, on the whole, are much the more favorable of the three factors. It is only here and there that there is any apparent difficulty in this respect. The matter of too high priced labor does not stack up so well as that of material, but there is a general belief that not only are matters improving in this direction but when springtime comes, the long period of probable idleness of labor will naturally tend to bring about a much more favorable of this problem than is now presented.

"There are the usual scattered exceptions to any general statement. Labor is plentiful in some sections, scarce in others. The matter of obtaining money for construction is the most difficult problem of all. It is not that money seems to be so high in price as that it is hard to get, particularly in the agricultural sections and on the countryside rather than in the large cities.

"Apparently when construction gets well under way, it will comprehend a great many dwelling houses in its purpose and intent; this because of the supreme necessity of more adequate housing almost everywhere.

"There also will be a very large number of educational buildings, such as schools, and additions to colleges and universities. The numerous 'drives' for funds set on foot by all sorts of educational institutions will bear fruit in many new buildings next spring. In particular, the great state universities of the West and the South have more liberal appropriations from their various legislatures for building purposes than for many years. There are likewise a number of public buildings under way.

"Few things tend to hasten the return to better times more than the building industry. Things used in the building of dwelling houses call upon virtually all the industries of the country for their products. A general and far-reaching construction program in this country in 1922 is the best possible harbinger of a return to more prosperous conditions."

The other day a prominent local architect called up to inquire regarding a concern that has not advertised with us for two years. "I saw their ad. some years ago in the Guide," said the architect, "and am unable to recall just where they are located." We gave him the address and learned subsequently that as a result the firm bagged a big order. How many similar orders, from architects who wouldn't take the trouble to look them up, that same concern has missed in the course of the past two years it would interest us to know.

Business is founded on reciprocity and co-operation. Any other plan than this spells bankruptcy. The successful business nowadays has a heart and a soul.

We have installed our built up roofs on some of the largest buildings in PHILADELPHIA.

If you contemplate erecting a new building or re-roofing an old building, let us submit our proposition for applying our "SILVER LAKE" Slag Asphalt - Asbestos Built up Roof.

Thru our experience, covering a period over fifty years, we can eliminate any future annoyance on your part with roofing trouble.

As The Editor Sees It

THE estimated cost of all buildings, alterations, additions, repairs and miscellaneous work in buildings for which permits were issued by the Philadelphia Bureau of Building Inspection for 1921 was $42,790,780, according to detailed reports printed on other pages of this issue of the GUIDE. Total operations of all kinds amounted to 14,-654. Compared with 1920 the report shows a decrease of $12,514,620, although an increase of 2,142 in operations over 1920.

More than 50 per cent. of the permits were for alterations and additions, which totaled $14,278,500, and these were the dominating factor in making this year a record one.

The total number of dwellings erected in 1921 was 2,244 at a cost of $12,149,-110. Permits were granted for 15 tenement houses, costing $810,000, making the total for dwelling construction, which led all classes of building, $12,959,110. A material increase in housing was made in 1921 over 1920. The number of dwellings in 1920 was 1,208, costing $10,466,-950. 1921 shows an increase of 1,036 houses over 1920, but does not approximate the yearly average. The average number of dwellings erected per year in Philadelphia prior to 1917 was 7,150. The average erected from 1917 to 1920 inculsive was 2,550, which showed a decrease per year of 4,600 houses for the four years, totaling 18,400, with a shortage in 1921 of 4,900, Philadelphia is approximatey 23,300 houses short of requirements.

The best month in 1921 for construction was November, with a total value of $5,796,695. October was a close second with $5,533,225. The lowest month was January, with $1,124,400.

Garage construction has been very active all through the year, and at one time more garage than dwelling permits were issued. There were 1,569 garages erected, costing $3,505,695.

Hotel construction was the poorest class of all buildings. In twelve months only one permit was issued for a hotel, which cost $10,000.

The following table shows the total for each year back to and including 1909:—

Year	Operations	Estimated Cost.
1909	17,294	$42,881,370
1910	16,383	37,866,565
1911	16,215	40,030,985
1912	14,907	37,173,635
1913	14,813	38,763,850
1914	15,709	35,419,605
1915	17,712	39,444,125
1916	15,613	49,896,570
1917	8,977	34,016,408
1918	5,950	15,452,670
1919	14,509	65,088,750
1920	12,512	55,305.400
1921	14,654	42,790,780

The estimate cost of operations for 1921 is approximately $12,600,000 below 1920. The forty-second ward, with 640 dwellings erected, leads all other districts. 587 two story dwellings and 53 three-story dwellings were built in this ward.

September, which is generally a dull month, leads in the number of dwellings started in the entire city, with 415, and October was second with 305. November followed with 276, and December showed a very large increase over 1920. This is an indication that residence work is very much on the increase.

* * *

Realizing the gigantic problems confronting the Building Industry in Philadelphia, a meeting of Construction men was held in the City Club, Thursday evening, December 5th, to analyze the situation and devise remedies to overcome friction and promote harmony and co-operation. It is regretable that the builders were not present at this meeting; not one of those present when introducing himself to the meeting was a builder. Architects, material men, Building Material Association's officials, engineers, school officials, city officals, representatives of organized labor associations, the press and all interested in promoting building were in evidence, but not a builder. The builders must come out of their shells if they want genuine coperation.

BLUE PRINTS

Great credit is due Mr. W. S. Hays, General Secretary of the National Federation of Construction Industries, who was instrumental in calling the meeting and preparing a most interesting programme. Harry C. Woods, Secretary of the Philadelphia Builders' Exchange and Employers' Association, had much to do with the success of the meeting. He was the prime factor in keeping the wheels moving and merits appreciation. Clarence C. Zanzinger, a prominent Philadelphia Architect of International fame, was toastmaster. Mr. Zanzinger's knowledge of conditions and affairs was evidenced in the ease with which he presented the various speakers and celerity with which he extracted the kernel from the shell. The purpose of the meeting, which is the first of a series, as Mr. Zanzinger explained, is to stimulate "a work together spirit for Philadelphia." The sense of the meeting was that apart from the construction needs due to normal growth of our city and those created by the war curtailment of new home building and proper maintenance of existing buildings, streets and all structures, the Delaware Bridge, Parkway Development and Sesqui-centennial with their contemporary construction requirements will make the next four years the most active period the construction industries of Philadelphia and vicinity have ever known.

It is up to us to devise ways and means to meet these needs. It will require continuous work by everyone. No more time must be wasted by workers whose maximum productive effort, and man hours will be so necessary. It will call for the best possible co-operation, leadership and team work. Our guiding motto must be maximum service at the lowest cost consistent with good standards of construction and living.

Samuel S. Shay, of the New Jeresy Bridge Commision, told of the work of the commission and said the work would be pushed to completion as rapidly as possible. I. T. Catherine, of the Board of Education, said that from 65 to 70 per cent. of Philadelphia's schools are old buildings and 17 per cent. of the pupils are on half time. Sixty million dollars are to be spent in the next ten years on schoolhouse construction. 18 new high schools and fifty-nine grade schools are part of the contemplated programme. Jos. A. Steinmetz advocated the Parkway site for the Sesqui-Centennial. He said that $25,000,000 of construction is planned or projected in that section. Concerning accommodations for automobiles, he said a project is under consideration to establish a huge parking area over the Diamond street reservoir.

Bernard J. Newman said that we need $80,000,000 of construction for homes in Philadelphia; that we are 20,000 houses short of requirements and that 6,000 houses must be built annually to care for the increase in population. He referred to the need of three or four millions of dollars for a revolving fund for construction.

David Knickerbacker Boyd, whose tireless efforts in the interest of the Building Trades not only in Philadelphia but throughout the entire country, are recognized and were acclaimed by all present, said that we must eliminate the waste of unemploment and restore interest and pride of craft to the workers in the building trades.

* * *

Subsequent meetings will be held Jan. 12th at Longacre Private Dining Room, 12.30 P. M., "Getting Dwelling Construction Under Way," discussion led by Messrs. Bernard J. Newman and J. W. Pearce.

Jan. 19th, Engineers' Club, 8.00 P. M., "Recruiting and Training Apprentices, Journeymen and Workers of the Building Trades," Mr. D. Knickerbacker Boyd is Chairman of this meeting.

Jan. 26th, Longacre, 12.30 P. M., subject, "How To Reduce Costs of Estimating," discussion led by Mr. Paul A. Davis.

* * *

ONLY the man who fancies himself in the role of pessimist can possibly find any excuse for discouragement in the 1922 business outlook. Men who can see the affairs of the country from every angle tell us that there is every reason to believe that the tide has turned, and that the country is on a gradual return to normal conditions. Thus, *Manufacturer's News* tells us:

Although industry received many hard knocks during the year now just closed, its prospects today are brighter than they have been since the signing of the armistice. It has passed through a period of readjustment more severe and radical in duration and extent than any experienced heretofore. It has taken, with creditable equanimity and courage, the losses incident to the deflation of values, and is now in splendid shape to meet competition in foreign as well as domestic markets.

The feeling of extreme optimism which ruled the country last September and October and that of pessimism which governed earlier in the year have given place to a rational and substantial faith in the gradual revival of business. There are no fantastic dreams of rapid trade expansion but a determination to make the best of every oportunity and to prepare for the general upturn, which is not far off.

Architect taking bids due January 17th at noon. Whitney Co., 101 Park avenue; Jacob & Youngs, 116 West Thirty-second street; George A. Fuller Co., 949 Broadway; John T. Brady & Co., 103 Park avenue; M. Reid & Co., 114 West Thirty-ninth street; Charles T. Wills, Inc., 286 Fifth avenue, and John Lowry, Jr., 8 West Fortieth street, New York City, are figuring.

Masonic Home, near Wilmington, Del. Architect, C. R. Hope, Wilmington, Del., Dupont Building. Owners, Masonic Order, care of W. Highfield, 226 West Ninth street, Wilmington, Del. Stone, 2 stories, 35x115 feet, slate roof, composition and oak floors (plumbing, heating and electric work reserved). Architect has received bids.

Residence and Garage, Wilmington, Del., $19,000. Architect, Samuel Abramson, 2315 Walnut street, Philadelphia. Owner, Max Breuer, 1409 Van Buren street, Wilmington, Del. Brick, 2½ stories and basement, 42x45 feet, garage, brick, 24x20 feet, 10 feet high, cement floor, weathering green slate roof, hardwood floors, hot water heating, electric lighting, tile work. Contract awarded to Charles H. Tindall & Son, Wilmington, Del.

Hotel, Frederick, Md. Architect, Federick Weber, Morris Building, Philadelphia. Owner, Frederick Hotel Co., care of Henry F. Copeland, President, Frederick, Md. Brick, concrete, steel, terra cotta, 7 stories and basement, 120x120 feet. Contract awarded to John S. Hershey, Stephen Girard Building. Philadelphia, who is taking sub-bids.

Proposals

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., January 7, 1922, Separate Sealed Proposals will be opened in this office at 3 P. M., January 25, 1922, for the installation of an ice making and refrigerating plant in the main hospital building for the U. S. Public Health Service Hospital, Norfolk, Va., Tanner's Creek Site. Drawing and specification may be obtained at this office in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., January 5, 1922.—Sealed proposals will be opened in this office at 3 P. M., Feb. 6, 1922, for the mechanical equipment complete (except elevators and lighting fixtures) of the Infirmary, Wing "A" and "B," and certain outside services and separate proposals for the construction, including approaches, in accordance with drawings and specifications which may be obtained from the Medical Officer in Charge at Oteen, N. C., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

Just remember this: Give out courtesy, kindness, patience and good-will, and you'll get them all back with compound interest. The men who deserve to rank in Class A do not chew the lint and fuss about the small misfits of life. To take what comes and forget the rest is wisdom. Let Braggo give the janitor the call, and the Hall Boys have it out with the Ashbox Inspector—you can't afford to soil your soul with small scraps. Fight on a big scale, or not at all. The folks who have trouble with ushers are always looking for trouble—and find it. Smile, old boy, smile!

If your sales-talk is keyed to interest men who build it should occupy space every week in the "Guide," the only building news magazine this side of Manhattan Island.

TELEPHONE MADISON SQUARE 5100

A FALSE STATEMENT CORRECTED

To the General Public:

My attention has been drawn to the numerous false statements being spread throughout building and construction circles to the effect that the Madison Square Garden Swimming Pool was designed and constructed by persons other than the ones who did the work and who deserve the credit.

Mr. J. Franklin Whitman, a waterproofing engineer and President of the Aquabar Waterproofing Products, of #489 Fifth Ave., New York City and #36 N. Delaware Ave., Phila., Pa., not only designed this pool under my directions, but personally superintended its construction.

It gives me much pleasure to announce this fact because of the very satisfactory and efficient manner in which the entire work was carried out. The construction of the pool and the installation of the mechanical plant was completed in thirty-nine (39) days, a remarkably short time. It was quite a difficult piece of engineering, as the floor of the pool was designed to be used for other athletic events during the winter season. Mr. Whitman succeeded admirably in incorporating my ideas in his design, carrying out the most minute details in a practical way.

Respectfully yours,

T. Rickard

AS THE EDITOR SEES IT

(Continued from page 20)

There is hope that the most important obstacles in the way of larger trade will be removed during the early part of 1922. Cheaper transportation and stabilized wage scales are sure to come. Progressive railroad executives and thinking wage earners no longer ignore the indisputable fact that upon their action depends the welfare of the farmer, the manufacturer and the public. A reasonable reduction in freight rates will lower the cost of living, cause a nation-wide demand for commodities of every description, and give immediate employment to the vast army of jobless.

The fall of money rates, which began in October, has already made itself felt in a gratifying demand for industrial securities, and it is probable that within a short tme plant owners will be able to secure all the funds they need for expansion and building purposes at reasonable rates. Bonds of many utility corporations which only a short time ago had to be sold to yield 7½ to 8½ per cent. now find a ready market at a rate yielding a trifle less than 6 per cent.

Industrial building will receive a tremendous impetus as soon as manufacturing corporations can obtain money at 6 per cent., which according to respectable financial authorities, is the maximum charge business should be called upon to assume. The load which industry has been carrying in the way of interest charges has been staggering, and the relief already in sight will contribute much to the revival of production in all lines.

The reaction from war activity, severe as it was, has left American business in a strategic position, as far as world trade is concerned, and if the foreign field is cultivated with the same degree of intensiveness as the domestic markets there is no reason why, within a few years, American manufactures, already the most popular in many distant lands, should not be found in every corner of the globe. All that is needed to bring this about is a more careful study of foreign requirements and the establishment of purely American selling agencies.

* * *

Taking the good with the bad, the prospects for 1922 justify the impression that it will be a splendid business year. Indeed, the corner has been turned. With capital and labor realizing more than ever before their dependence upon each other, with a general wage revision program, reduced transportation costs, and generous farm crops in sight, are we not justified in looking into the future with light hearts, with faith in the fairness, enterprise and good will of the nation's planners and workers, whether employed in office, shop, store, in mines or in the fields?

* * *

Secretary Hoover recently made the statement that "the economic situation for the new year holds much good promise. Our year of liquidation is over and we can look forward to a year of recuperation. Except for the seasonal air of the winter we should have a continuous lessening of unemployment and an increasing betterment in the agricultural situation. We have passed through the most precipitous price drop in our history, a drop averaging nearly 50 per cent. and necessitating the writing of something ovr $20,000,000,000 off our books as a Nation during 1921. We have gotten through the credit strain that has been involved in this violent writing down of national inventories; we have absorbed the enormous surplus of goods carried over from the post-war boom; we are on much sounder foundations.

"We have still a good many readjustments to be made, due to the inequality in the fall of prices and wages. The farmer has fallen too much. Some of the industries, such as coal, railways and construction, are far above the average levels of the country, but economic pressures, although painful, are in motion which will eventually reduce the expense and the charges of these industries against the community."

* * *

Richard Spillane, in the Philadelphia *Public Ledger,* gave a very sane resume of the situation and said in part,

Retrospect is not so attractive to the American business man as prospect. Prophecy is likely to confound the prophet, but if a prophet sought to predict the business of 1922, he possibly would take some of the following facts into consideration first.

There is only one very weak link in the chain of American industry. That is the farm. The buying power of the agriculturist is small. The farmer makes the

largest unit in the American family. Good crops at fair prices in 1922 would be of incalculable value to the country. By reason of the farmers' financial weakness all industries depending largely on the farm for their outlet must have restricted sales this year.

Railroads are steadily working into a stronger position financially. Their purchases in the new year will be good. This means much for steel, lumber and many other industries.

Textiles look as if they will be in strong demand. Retailers the country over are carrying very small stock. Warehouses are empty. This means imperative buying for each recurring season. There is danger of shortage of raw cotton before the next crop is grown. The world's supply of cotton is abnormally small.

Copper production is considerably below copper consumption. If consumption continues at the present rate, the copper mines, long shut down, should be in active operation in the second if not the first quarter of the year.

The buying habits of the people have changed within the last two years. This is particularly marked in department-store trade. Buyers now scrutinize the goods. Also they study prices. They want to "be shown."

Stocks of material of every kind and character held by middlemen are very low. In other words, there is a tremendous amount of stuff needed to make up the supplies ordinarily carried and which probably will be carried as improvement in conditions becomes more marked.

The country is richer than most persons know and money never was so well and widely distributed. One evidence is in the fact that savings banks' deposits, despite the trying times of the last year and a half or two years, are but little below the highest in history.

Strikes are not so many and cannot be. The times are not propitious. Strikes are most plentiful in flush time. The wastes due to strikes are colossal. The absence of strikes mean economy.

Nothing more effective as proof of the great improvement in conditions basically is furnished than in the reduction in unemployment, despite the season when much of the labor of farm, of forest and various outdoor tasks is congregated in cities for the winter.

Construction prospects for the new year are unusually good. In some branches of the building industry enthusiastic souls declare the year will be "the best ever." If it is well above the average they should be content. Abnormal activity brings bad results usually.

Lumber is in better position than for many years.

Automobiles—Prospects not bright. The impaired financial state of the agriculturists, which, to a degree, affects many industries, has a bearing on this.

Cheaper money—Inevitably, although there are occasional checks and at times a rebound, the interest rate is going down.

Foreign trade—By no means good, but much larger than would be supposed from the reports of its collapse.

* * *

The whole story is summed up practically in the fact that the country is recuperating after the very severe attack of the thing that ailed it and which it "caught" in the war days and which went to its head in the post-war days.

After every war it is so with the people who have been engaged. And there never was a war like the one of recent date.

Americans scarcely appreciate what a tremedous change it made in their position momentarily. Before the war America was a debtor to Europe through stock and bonds and other holdings of American securities abroad to the extent of $5,000,000,000.

America came out of the war a creditor nation to the extent of more than $10,000,000,000.

* * *

DISCUSSION has been rife of late regarding the deveolpment of a plan to render construction less of a seasonal industry. It has been suggested that one remedy is to start public works in the fall, but this would be only a partial remedy, not a complete cure. We have taken up this question in these columns from various angles and are always looking for new ideas that may throw light on this vexing and serious problem. A recent issue of a monthly bulletin published by David Lupton's Sons Co., contains a suggestion for stabilizing building.

The general opinion is that building costs will not go lower for the next six months at least. The expected tendency for some years is slowly downward; but the gain from waiting will in most cases be offset by loss of profits.

The labor situation is easier, though still far from satisfactory. In most localities the building trades have accepted moderate wage cuts, and are fairly well employed. In Chicago seven trades are holding out against the Landis award, and a strong organization of citizenus has been formed to force it. Other cities with arbitration agreements, such as Cleveland, are getting along fairly well, though the awards are very reluctantly accepted by the unions. Boston and San Francisco follow the open shop.

Recognition of the Open Shop principle in the new rules by the U. S. Railroad Labor Board, governing railroad shop employes, emphasizes the present tendency to give first place to the public's interest in labor disputes.

When we compare the chronic unrest in the building industry with the comparative peace in manufacturing industries, we find that it arises in a quite natural way from the conditions under which building is conducted.

Chief of these is the seasonal nature of most buiding. Since it costs a little less to build in summer than in winter, owners incline to let contracts in the early spring. This leads to a human preference on the part of labor for making wage agreements after contracts have been let; i. e., usually May 1. The resultant uncertainty makes both the owner and the contractor hesitate to sign contracts until wages have been fixed, thereby intensifying the seasonal tendency.

The final result is that labor is largely idle during the winter; contractors must earn their winter overheads during the summer; and with largely transient contact on both sides neither feels any great interest in the other's problems. Hence it is hardly strange that both employers and workers feel that self-protction requires them to do things which do not commonly occur in industries whose workers have fixed jobs, fixed homes, and some understanding of their employer's needs.

Not only do contractors and workers find themselves burdened with the high costs of seasonal employment, but the material manufacturers likewise must choose between manufacturing for stock during dull months and laying off part of their help.

All this complicated chain results from the difference in cost of construction between winter and summer. If that cost could be equalized to the owner, so that he could start building at any season without added expense, building would immediately become an all-year occupation. The employer would keep his men, the workers would keep their jobs, the peak cost of summer building would be leveled, and everybody would be the gainer through the more uniform distribution of cost and effort.

This condition could be brought about by a joint agreement of material makers, labor, and building contractors to maintain a graduated scale of prices, wages and profits, with just enough difference between the winter and summer scales to offset the difference in cost of building.

Ways are frequently found to reduce this difference in cost; but whether it be high or low, any difference necessary in scales would be cheaper than chronic winter unemployment.

AQUABAR

WEATHERPROOFING

FOR
STUCCO, BRICK,
STONE AND MARBLE

No. 2 COLORLESS LIQUID

An odorless, transparent, colorless liquid, which when applied to outside walls, stops rain from driving in and ruining the interior.

It eliminates the white or green mould and other unsightly forms of decay, which are so commonly seen. Frost is barred and thus the tendency to crack and peel is minimized, particularly in stucco.

As The Editor Sees It

TOO much emphasis cannot be laid on the terrific waste caused in this country by fire. This great loss to the nation reaches such staggering figures that any dimunition in the causes of fires is always worthy of consideration. Chimneys and flues, a vital factor in construction work, very frequently receive insufficient consideration and thus become a major cause of fire.

Of the four divisions into which heating plants are divided in the list of fire causes drawn up by the Actuarial Underwriters, that of *Defective Chimneys and Flues* is responsible for the heaviest property losses. It stands third in the list of major fire causes. *Electricity* and *Matches-Smoking* being the leaders.

During the six years from 1915 to 1920 this "strictly preventable" fire hazard was the cause of $71,037,084 worth of material wealth being destroyed. Allowing 25% for unreported losses and those upon uninsured property, the total is increased to $88,796,355, which is considered a conservative estimate of the actual losses.

The hazard is one that is thoroughly recognized by state fire marshals, fire prevention engineers, fire chiefs and other competent authorities. Fire chiefs know, as each winter season approaches, that they must look forward to fighting a multitude of fires originating in defective chimneys and flues. Many, in fact, carry out regular campaigns of educational publicity aimed to reduce the losses from this cause. Last year a fire chief in an Ohio city condemned and had torn down seventeen chimneys that he considered particularly dangerous.

Bad construction is held to be the chief reason for the heavy damage from the chimney and flue hazard, although carelessness is responsible for much of the trouble. Carelessness figures in the situation when lack of cleaning causes a flue to overheat and start a fire, and when necesary repairs are neglected. Also, when unused flue holes are stopped with papers, rags, boards and other inflammable materials instead of with a metal cap securely held in place.

Last winter a Columbus, Ohio, woman lost her two children in a fire due to an unprotected flue opening. The children were alone in the house when the fire occurred.

Statistics show that over 12% of dwelling house fire losses originate from defective chimneys and flues, but the hazard is also marked in many mercantile establishments and small town factories of inferior construction.

School houses, too, have suffered many chimney and flue fires. Just a few days ago at Isabel, Kansas, the high school was gutted by such a fire, the loss of some $80,000 being offset by only $48,000 of insurance.

The flue is the draught duct leading through the chimney and is conected to the stove or furnace by the smoke-pipe. When flues are improperly lined or chimneys are constructed upon unsafe specifications, sooner or later fire is liable to ensue.

The reasons why chimneys are such a fruitful source of fire have been summed up as follows:

1. Use of terra cotta sewer-pipe or other unprotected tile or hollow blocks for the chimney;

2. Construction of chimney with bricks laid on edge instead of flat;

3. Chimney walls built with brick flatwise or only one brick thick, and flues unlined;

4. Supporting chimney on the timber construction of a building or upon brackets; or insufficient masonry foundation, when the chimney rests on the ground;

5. Two or more connections to the same flue;

6. Building woodwork into the wall of a chimney, or placing it in contact with its exterior;

7. Smoke-pipes arranged to enter a chimney in vertical line;

8. Carelessness in not sealing the connection between smoke-pipe and the chimney, and failure to anchor the pipe to the chimney;

9. Carelessness in not renewing a rusted smoke-pipe and also in allowing combustible material too near the pipe;

10. Carelessness in not keeping the

chimney clean and the joints in the brickwork properly pointed.

It often happens that old or improperly constructed chimneys develop cracks in that portion passing through the attic and thus become a continual menace. Sparks fly out into the attic and owing to the location, a fire thus started is likely to gain considerable headway before being discovered.

The combination of a dilapidated chimney and a wooden shingle roof is one of the worst fire hazards that could be devised. The sparks escape through the bricks in such a chimney and find the tinder-like wooden shingles excellent fuel for quick action. Danger also exists at the roof line when the flashing has been improperly installed or when the chimnew walls are in direct contact with the roof structure.

As a general thing, protection against fire is comparatively simple and inexpensive, and this is true also as far as safeguarding chimneys and flues is concerned.

Heavy as are the losses from this hazard, it is surprising, in view of the methods of construction prevailing in many communities, that the record is not worse than it is. In a recent defective flue fire in a Pennsylvania city, as an instance, it was found that a wooden joist ran into the flue opening, a careless building practice which is, unfortunately, only too common.

A chimney should always be solidly built upon an independent and indestructible foundation. It should never rest upon wooden construction because this will cause shrinkage and settling, with the result that the chimney is very likely to crack and permit the escape of sparks.

In some parts of the country it is a common practice to suspend a chimney from floor or roof timbers by iron hangers. This is a dangerous custom and should not be permitted.

Owing to the great need for detailed and authoritative specifications covering the safe construction of chimneys and flues, the National Board of Fire Underwriters has prepared a model ordinance for town, city or state use, and copies may be secured free of charge by those interested.

A chimney wall should never be less than 3¾ inches thick (the width of a standard size brick) and should be lined with chimney tile. This is important, since in the absence of this lining the mortar between the bricks will eventually disintegrate and fall out under the action of heat and the gases of combustion. For these reasons, plaster is not a satisfactory lining as it is sure to crack and fall off in the course of time. Fire clay chimney tile, manufactured for the purpose, is the only safe material and its use adds little to the cost of construction. Excess mortar at the tile joints should be carefully removed so that the flue will present a smooth surface which will create a good draft and keep the accumulation of soot at a minimum.

Building chimneys with bricks set on edge is dangerous as it makes thin, unstable construction that soon causes the cracking of the mortar and the development of crevices between the bricks. It is considered imperative that the bricks should be laid flatwise. The practice of building wood work into a chimney wall should never be permitted, nor should it touch the chimney, a separation of approximately two inches being necessary for safety. This applies to all floor construction, partitions, rafters, roof boards and shingles.

Where a chimney passes through a floor, the space between the floor timbers and the chimney should be filled with some porous, incombustible material, such as cinders, refuse plaster or mortar, held in place by a sheet of metal nailed to the underside of the wooden beams. Neither solid mortar nor brickwork should be used to fill the space, since they will transmit heat. Gypsum blocks sawed to fit the space constitute one of the best materials for this purpose. At the roofline sheet metal flashing, set into the joints of the brickwork and overlapping the roof boards, should be used

It may be mentioned that filling the space between the chimney and the woodwork has two important results. In the first place it prevents a fire, originating on a lower floor, from passing up behind a partition or furring into upper stories or the attic, and also avoids the possibiity of rats or mice building nests in these spaces and thus filling them with highly combustible material, which in time may be ignited from heat transmitted through the chimney wall. Woodwork frequently catches fire in this way.

It is stated in the model ordinance that a round flue will give a better draught than a square or rectangular shape having the same cross-sectional area, and it advocates using the round kind when practicable. Where such flues are placed inside rectangular chimney walls however, care must be exercised to fill completely the corner spaces. Otherwise there is likely to be a leakage of air which would detract from the draught and also increase the fire hazard.

It is advised that chimneys, both new and old, be tested by building a smudge fire at the bottom of the flue and, while the smoke is flowing freely, closing the flue at the top. The escape of smoke into other flues or through the chimney walls will indicate openings that should be closed up.

Drawings and specifications may be obtained at this office in the dsceretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

WHY EVERY MERCHANT SHOULD BOOM CONSTRUCTION OF NEW HOMES

BY WHARTON CLAY

Commissioner, Associated Metal Lath Mfrs.

The average merchant is apt to think that an increase in building construction will bring profit only to the building interests, but such is not a fact. It is up to those in the building business to show the buisness man why he should get into the Own-Your-Home Movement; why he should subscribe for local Own-Your-Home bonds, should buy mortgages or mortgage bonds for local housing construction, and should vote for local tax exemption or limitation of taxes on new homes, and other alleviating measures.

When rents went up, where did the tenant get the money to pay the landlord? As rents climb ever higher he must continue to pay his increased rent out of his income. This is where the insurance man, furniture man, clothing man, and all other merchants have lost out, and explains to a large degree the famous "Buyers' Strike." Many people use that as an excuse, when, as a matter of fact, they were obliged to stop buying to make both ends meet. The only exceptions are the families which have doubled up, and, of course, these families have no use for additional furnishings or household equipment and many other lines of merchandise.

Of the average man's income in 1913, twenty per cent. of it went for the rent of an apartment with steam heat, or for a flat or house and coal for heating. Thirty per cent. went for food and lunches. Clothing for the family used up seventeen per cent. There was money for laundry and cleaning, life insurance, tobacco, candy, movie shows, vacations, etc., and still six per cent. left for savings and investments.

Of the average income in 1921, rent is forty per cent. Now, when the percentage for the remaining items is compared with that credited to them in 1913, we see that the increased rent was paid at the expense of almost every other business, trade or profession. The money rightfully belonging to them was diverted to bulge the pockets of the landlord.

Not only has much local business been bad, largely on account of this condition, but the families of thousands of men normally engaged in the building business, which represents more than a quarter of the total wealth of the country, and supports directly or indirectly eleven million of the people, have diminished purchasing power since the breadwinner has been idle or working part time only.

Those of the building business owe it to themselves and to the general welfare to get this matter thoroughly understood by the merchants of our cities. They must be the ones to start it, and the merchants and other influential business men will surely co-operate if they realize how far-reaching into their own welfare is the healthy normal growth of the building industry.

The furniture industry, under the guidance of Robert Jordan, is blazing the way with a million-dollar campaign to urge home-building. Other industries, such as electric-fixtures; public-service corporations, floor covering, and many others similarly affected, will undertake national campaigns as soon as they are convinced of the opportunity.

So, now we say, let everybody get behind the Own-Your-Home movement. The construction of more buildings means more business, more money in the pocket, and is of direct and vital interest to every merchant in town. Because of increased purchasing power of building mechanics and artisans, because of purchases for building materials, decorations, house and garden equipment, etc., and most of all, because the dam of high rents is thus forced to break, we bring strength and nourishment to the parched and wilted fields of general business.

The Chamber of Commerce, real-estate men—every merchant in the community—must see to it that the force of public opinion is brought to bear to induce the local bankers and loan men to facilitate construction by loaning mortgage money

at the lowest interest rates and lowest commission possible, and for as large a part of the total cost of the new homes as is consistent with the best interests of the community.

Building and loan associations should be organized and encouraged, and the working of this generally little-known form of financial aid to the home builder or buyer be widely advertised.

Building activity is axiomatic with a live community; it means business and prosperity for nearly every merchant in town, and home owning is the surest guarantee for a continued happy and prosperous commonwealth.

AN ORDINANCE FOR CONSTRUCTION OF CHIMNEYS

SUITABLE FOR USE IN CITIES AND TOWNS OF ANY SIZE OR AS A STATE LAW

Recommended by the National Board of Fire Underwriters, Committee on Construction of Buildings

This Ordinance does not apply to chimneys for high pressure boilers, furances used in manufacture, or for other heating appliances where high temperatures are maintained; but shall apply to all other chimneys which form a part of a building construction.

Chimney Construction

1. The walls of all chimneys to which this Ordinance applies, whether the fuel be wood, coal, gas or oil, shall be built of brick, concrete, stone, or hollow tile, of such thickness and construction as is hereafter specified, but this shall not preclude the use of a metal smoke-stack when located inside of a vent shaft having walls not less than 8 inches thick, and having an air space between the walls and stack on all sides.

2. Brick chimneys shall be built of solid brick, or may be built of perforated radial brick manufactured for the purpose and adapted to withstand high temperatures, but no other hollow brick shall be used.

3. The walls of brick chimneys shall not be less than 3¾ inches thick (width of a standard size brick), and shall be lined with fire clay flue lining.

4. Flue lining may be omitted in brick chimneys for private dwellings provided the walls of the chimneys are not less than 8 inches thick, and that the inner course shall be a refractory clay brick having a softening point of at least 1922 degrees Fahrenheit (Seger Cone 05).

5. Perforated radial brick chimneys may be unlined, provided the brick shall have a softening point of not less than 1994 degrees Fahrenheit (Seger Cone 03), and shall be not less than 7½ inches in radial thickness, except that when such chimney is located inside a vent shaft having walls not less than 8 inches thick, the thickness of the chimney wall may be determined by engineering design. The brick shall be shaped to the circular and radial lines of the various sections of the shaft so as to form even joints.

6. All brick work shall be laid in spread mortar, with all joints push-filled. Exposed joints both inside and outside shall be struck smooth. No plaster lining permitted.

7. Concrete chimneys cast in place shall be suitably reinforced vertically and horizontally. The walls shall be not less than 3¾ inches thick and shall be lined with fire clay flue lining.

Flue lining may be omitted in reinforced concrete chimneys for private dwellings, provided the walls of the chimneys be not less than 6 inches thick, and provided further that quartz gravel shall not be used as the coarse aggregate.

8. Concrete blocks used in chimney construction shall have walls not less than 3¾ inches thick, and blocks enclosing more than one flue shall have suitable reinforcement completely encircling the block chimneys shall have fire cay flue lining.

9. Stone chimneys shall be at least 4 inches thicker than required for corresponding brick chimneys, and shall have fire clay flue lining. Rubble stone chimney walls shall not be less than 12 inches thick.

10. Hollow building tile shall not be used for the walls of isolated or independent chimneys, but may be used for chimneys built in connection with exterior hollow tile walls of buildings not exceeding three stories in height, in which case the chimney walls shall be not less than 8 inches thick. The outer 8 inches of a building wall may serve as the outside wall of the chimney, but the remaining chimney walls shall be constructed of two layers of 4-inch tile set with broken joints; or they may be built of 4 inches of solid brickwork. In either case the walls of the chimney shall be securely bonded into the wall of the building. No chimney shall be corbeled from a hollow tile wall. All chimneys built of hollow building tile shall have fire clay flue lining.

11. Chimneys shall be built at least 3 feet above flat roofs, and 2 feet above the ridges of peak roofs, and shall be properly capped with stone, terra cotta, concrete, cast iron, or other approved material; but no such cap or coping shall decrease the required flue area.

12. Fire clay flue linings shall be manufactured from suitable refractory clay, either natural or compounded, which has a softening point not lower than 1994 degrees Fahrenheit (Seger Colon 03), and shall be adapted to withstand high temperatures and flue gases. They shall be of standard commercial thickness, but not less than ¾ inch. The flue sections shall be set in mortar of quality hereafter specified and shall have the joints struck smooth on the inside. The masonry shall be built around each section of lining as it is placed, and all spaces between masonry and linings shall be completely filled with mortar. No broken flue lining shall be used. Flue linings shall start at least 4 inches below the bottom of smokepipe intakes of flues, or from the throat of fireplaces, and shall be continuous the entire heights of the flues and project at least 4 inches above chimney top to allow for a 2 inch wash and a 2 inch projection of lining. The wash or splay shall be formed of a rich cement mortar. To improve the draft the wash surface should be concave wherever practical. Instead of the wash, a special chimney cap or coping may be used. Wherever flue linings are specified fire brick may be submitted if desired.

13. Chimneys shall not rest upon or be carried by wooden floors, beams or brackets, nor be hung from wooden rafters. Iron brackets or stirrups attached to wooden construction shall not be used to support chimneys. In frame buildings shall always be built from the ground up, or rest on basement walls.

14. Chimneys shall be built upon concrete or masonry foundations properly proportioned to carry the weight imposed without danger of settlement or cracking. The foundation for an exterior chimney shall start below the frost line.

15. The walls of brick buildings may form part of a chimney, but the walls of the chimney shall be securely bonded into the walls of the building, and the flue shall be lined the same as an independent chimney. Flues in party walls shall not extend beyond the center of the walls, and their location shall be permanently indicated on the exposed side of the wall.

16. No wall less than 12 inches thick shall be used to support a corbeled chimney, such corbeling shall not project more than 6 inches from the face of the wall, and in all such cases the corbeling shall consist of at least five courses of brick.

17. Flues shall be built as nearly vertical as possible, but in no case shall they have an angle greater than 45 degrees from the vertical. Where flues change

direction, the abutting linings at the angle joints shall be chipped to fit closely, and at no point shall the cross section area be reduced. There shall be but one connection to a flue.

18. Not more than two flues shall be permitted in the same flue space, and the joints of any two adjoining sets of flue linings shall be offset at least 7 inches. When there are more than two flues in a chimney, at least each third flue shall be separated from the others by a smoke-tight withe or division wall of brick or concrete at least 3¾ inches thick and bonded into the sidewalls. Each flue intended for a heating furnace or boiler connection, or for a fireplace, shall be separated from other flues by such a withe. In hollow tile chimneys the withe may be of tile.

19. When any single flue area within chimney walls exceeds 200 square inches, the walls shall be built not less than 8 inches thick and shall have fire clay flue lining as previously specified, but when flues become so large as to render it impractical to secure fire clay flue lining, they shall be lined with fire brick for a distance of at least 25 feet from the point of intake. Fire brick shall be laid in clay mortar.

20. Connections between chimneys and roof shall be made with sheet metal counter or cap flashing (copper recommended), arranged to overlap roof flashing and allow for movement that may occur between chimneys and roofs.

21. No increase in the wall thickness of chimneys, nor any projecting masonry, shall be permitted within a distance of 12 inches above or below the rafters or roof joists.

22. Irrespective of whether the fuel used be coal, coke, wood, or oil, the minimum area inside of chimney flue linings for various heating devices shall be as follows: For warm air furnaces, or low pressure steam or hot water heating boilers, not less than 75 square inches; for fireplaces, not less than one-tenth the area of the fireplace opening, but never less than 75 inches; for stoves, ranges, and other forms of room heaters, 49 square inches for rectangular flues, or an inside diameter of 7 inches for round flues. In no case shall the short cross section dimension of a rectangular flue be less than two-thirds the greater dimension.

When gas is the fuel used in a heating furnace, boiler, or automatic hot water the flues shall be of the same size and construction as required for stoves and ranges using other fuel. Vent flues where required for other domestic gas burning appliances may be of smaller size, but not less than 10 square inches. Such flues shall be made of fire clay or its equivalent not less than 1 inch thick with joints properly designed to effect a permanent seal, and the surrounding masonry walls may be omitted. Metal vent flues are permitted.

23. Smokepipe intakes to flues shall always enter the chimney through the side and shall consist of fire clay or metal thimbles securely set in the chimney wall with mortar, or the intake may be cast in concrete. Such openings shall be at least 18 inches below wooden lath and plaster or other combustible ceilings, or open joists. Neither the intake pipe nor thimble shall project into the flue. No woodwork shall be placed within 6 inches of the thimble. The thimble shall be surrounded by metal lath and plaster for a space of at least 6 inches, or an open space of that width shall be provided on all sides.

24. All mortar used in chimney construction, except as specified for fire brick in paragraph 19, shall be cement mortar proportioned as follows: Two bags of Portland cement, not less than 188 pounds, and one bag of dry hydrated lime 50 pounds, thoroughly mixed dry. To this mixture shall be added three times its volume of clean, sharp sand with sufficient water to produce proper consistency. When dry hydrated lime is not available, 1 cubic foot of completely slaked lime putty may be substituted for 50 pounds of dry hydrate. In case of such substitution, the mixing of lime and cement shall be very thorough. Dry hydrate should always be used in preference to lime putty.

25. After a chimney has been completed, all flues shall be thoroughly cleaned and left smooth on the inside.

26. All flues to which heating furnaces or boilers are to be connected shall be subjected to a smoke test before acceptance, but the test shall not be made until the mortar has thoroughly hardened. The method of test is to build a smudge fire at bottom of the flue and while the smoke is flowing freely from the flue, close it tighty at the top. Escape of smoke into other flues or through the chimney walls indicates openings that shall be made tight before the chimney is accepted. The test shall be made by the contractor in the presence of the Building Inspector or other official having jurisdiction, and of the owner of his representative.

Woodwork Around Chimneys

1. No wooden beams, joists, or rafters shall be placed within 2 inches of the outside face of chimneys, whether the same be for smoke, air or any other purpose. No woodwork shall be placed within 4 inches of the back wall of any fireplace.

2. All spaces between chimneys and wooden joists or beams shall be filled with loose cinders, loose mortar refuse, gypsum block, or other porous incombustible material to form a firestop.

The incombustible material shall be supported by strips of sheet metal or metal lath set into the brickwork and nailed to the wooden beams, forming a buckled flexible joint between, or by similar strips of metal nailed to the woodwork with the inner edge close to the chimney.

3. No wooden studding, furring, lathing, or plugging shall be placed against any chimney, or in the joints thereof. Wooden construction shall either be set away from the chimneys, or the plastering shall be directly on the masonry or on metal lathing or on incombustible furring material. Wood furring strips placed around chimneys to support base or other trim shall be insulated from the masonry by asbestos paper, at least ⅛-inch thick, and metal plugs or approved incombustible nail holding devices attached to the wall surface shall be used for nailing.

4. The walls of fireplaces shall never be less than 8 inches thick, and if built of stone the minimum thickness shall be 12 inches.

5. All fireplaces and chimney breasts shall have trimmer arches or other approved fire-resistive construction supporting hearths. The arches and hearths shall be at least 20 inches wide measured from the face of the chimney breast. The arches shall be of brick, stone or hollow tile, not less than 4 inches thick. A flat stone or a reinforced concrete slab may be used to carry the hearth instead of an arch if it be properly supported and a suitable fill be provided between it and the hearth. The length of trimmer arches and hearths shall be not less than 24 inches longer than the fireplace opening. Hearths shall be of brick, stone, tile, or concrete as may be specified. Wood centering under a trimmer arch shall be removed before plastering the ceilings beneath.

6. No coal burning heater shall be place in a fireplace which does not conform to the foregoing requirements and have an incombustible mantel.

7. No wooden mantel or other woodwork shall be placed within 8 inches of the side or within 12 inches of the top of any open fireplace. No combustible summer piece or fire board shall be used.

8. Any person or persons, whether owner, builder or mechanic, who shall build a chimney or flue in violation of any requirement of this Ordinance shall be deemed guilty of a misdeameanor and shall be fined not less than $10 nor more than $..... for each offense; and any chimney or flue which is built in violation of any requirement of this Ordinance shall be immediately demolished or rebuilt. It

shall be the duty of the Building Inspector or other duly authorized official to enforce this Ordinance.

9. All ordinances or parts of ordinances in conflict with this Ordinance are hereby repealed.

SCAFFOLDS CODE

A complete revision of the Industrial Board "Scaffold" Safety Standards has been made in an endeavor to make it complete and up to date.

A meeting of a sub-committee of the original committee has been called for Tuesday, January 24, 1922, for the purpose of going over this tentative draft.

Following this meeting the revised code will be submitted to the larger Committee and to the public for general constructive criticism.

It is hoped to have this revised and in effect by the time the Spring building program starts.

The housing shortage in this country will not be overcome within the next five years even with the best of good fortune. This statement was made by John Ihlder, manager of the Civic Development Department of the Chamber of Commerce of the United States, before the recent housing conference of the American Society of Civil Engineers held in New York.

Mr. Ilhder said that even the well-to-do would not be as adequately provided with good housing in 1927 as they were in 1914.

"As for the wage-earner, let alone the poor, their problem will be with us a good deal longer," he said. "Consequently it is part of common sense to base our proposals on the proposition that the campaign will be long continued and that whatever is to produce results must be economically sound." Mr. Ihlder pronounced as dangerous some of the so-called "emergency" housing legislation. He pointed out that during the last two years there has been legislation not based upon any deep study, and designed merely to check, temporarily, certain abuses from which a vocal part of the community is suffering. Legislation designed, not to cure, but simply to reduce irritation, he said, is likely to have effects quite unlooked for.

Mr. Ihlder explained that during the war he was an advocate of government housing for war workers.

"That was a time of real emergency and it had a definite terminal point, the end of the war," he said. "Today the situation is fundamentally different. What we do now has no definite terminal point. Any date we may set is easily changed. What we do now sets precedents, establishes a habit of mind which will carry on. So it is important that our precedents, our habits of mind, have in them the possibility of continued growth and development. Adequate and good housing must pay a fair return on the investment. Only so can we be assured of enough good, new housing to meet our growing needs and our rising standards."

Speaking of building costs, Mr. Ihlder said that "so far as experience goes, such short cuts to the millennium as government building and management do not promise to reduce real costs. Government operation, not only in this country but in others whose distance gives a haze of enchantment, has, as a rule, proved clumsy, inefficient, and expensive. Certain functions must necessarily be performed by government, but the burden of proof is always on those who would transfer new functions to the government. So far, proof is lacking that governmental construction or management of housing would produce better or as good results in America as would private. But at the same time those of us who hold to this belief must recognize that dissatisfaction with present housing conditions is causing a growing sentiment for direct participation by the government. Our only effective answer is to produce better results through private operation.

"In brief then, the kind of housing legislation which, because of experience, we can count upon to aid, is regulatory, the kind that protects the men who would contribute to the public wealth from the exploiter who would prey upon the public wealth. This kind of legislation, building codes, housing codes, city planning and zoning ordinances we shoud perfect and promote, confident that if well devised, it will encourage building because it will make investments more secure."

CINCINNATI CARPENTERS VOTE TO ACCEPT WAGE CUT

Canvass of the vote of the various locals completed January 11 by the Cincinnati carpenters' district council showed that the men had voted 980 to 652 in favor of accepting ninety-five cents an hour minimum rate of pay, proposed by the Master Builders' Association. Carpenters have been receiving one dollar an hour.

HEARINGS ON FREIGHT CASES ON BUILDING MATERIAL SET

Hearings on the freight rate cases involving shipment of sand and gravel, brick, lime, cement, gypsum and asphalt have been set for Jan. 24 and 25 by the Interstate Commerce Commission. On Jan. 26 and 27 hearings on the lumber and forest products cases will be heard.

BUILDING CODE.

The first section of the tentative draft of the Building Code was forwarded to the members of the Building Code Master Committee appointed by Commissioner C. B. Connelley.

This section comprises all that part of the tentative code covering assembly buildings. The Committee was asked to study this section of the code. When the entire tentative draft has been completed and forwarded to the Committee, a meeting will be called for the purpose of taking the entire code under advisement. The members of the Committee are: Mr. Charles T. Ingham, Pittsburgh; Mr. George H. Danforth, Pittsburgh; E. F. Welsh, Secretary Penn State Building Trades, Pittsburgh; Mr. Edgar A. Weimer, Lebanon, Pa.; John Molitor, Chief Bureau of Housing, Department of Health, Harrisburg; Bernard F. O'-Rourke, Building Inspector, Wilkes-Barre; Edwin Clark, Chief Bureau of Building Inspection, Philadelphia; Mr. D. Knickerbacker Boyd, Philadelphia; Prof. C. D. Dunnells, Carnegie Institute of Technology, Pittsburgh; and Robert J. Cochran, Chief, Bureau of Building, Pittsburgh.

It is surely an injustice to your workmen as well as a source of loss to yourself to supply poor tools in your shop equipment. No man can do anything approaching good work with tools that take the edge off enthusiasm. In shop management, as in most things, details are the whole cloth. Tools are like men. They do good work or they do not, according to the character which they possess. Character in tools is a matter of good materials, expert making and correct design.

All live men are advertisers, and the only man who should not advertise is the man who has nothing to offer to the world in the way of human service, and such a man is a dead one, whether he knows it or not. Advertising is a legitimate and ethical proposition. Life is too short for you to hide yourself away, mantled in your modesty, and let the world hunt you out. Even the dead are advertisers, for on visiting a beautiful cemetery the other day, I noticed that on nearly every marble slab was given a list of the virtues, talents and beautiful qualities which the dead man was supposed to have carried in stock. This is what you call non-productive advertising, or advertising from an emotional standpoint.—Elbert Hubbard.

The impractical dreamers are not the architects, but the clients themselves, as a rule.

The "Builders' Guide" is in its thirty-seventh year of continuous publication.

As The Editor Sees It

OF the many problems confronting the construction industry today, none is more important than the finding of a way to eliminate the seasonal character of the building game. This problem is receiving earnest and thoughtful consideration from all concerned, and the GUIDE has followed a policy of publishing everything pertinent to this question, which has come to its notice. All branches of the construction industry are devising ways and means to carry on work despite the heretofore supposedly unsurmountable difficulties imposed by cold weather. We have recently put before our readers articles on bricklaying, cement setting and the like in cold weather. A plan proposed by the Flintkote Co., and adopted and followed by the "Prepared Roofing Makers" might easily be used by other branches of the construction industry.

Though comparatively new in business, manufacturers of asphalt roofing—shingle and rolls—are thoroughly familiar with the old problem of keeping their mills busy during the months of December, January and February. They have been among the many victims of seasonal peaks and depressions. But they have suffered more perhaps than the average manufacturer because theirs has been a fast growing industry, and after the winter let-down in production, it has been a terrific strain to meet the heavy spring demand.

How to distribute demand more evenly throughout the year seemed to be a more pressing problem last November than at any time in the last few years, for all signs pointed to unusual building activity beginning with the spring of 1922. What could be done to stimulate winter buying of roofing material?

The leading manufacturer in the industry—leader because of his ownership of patents covering a widely used asphalt strip shingle which some forty factories are making under license agreements—undertook to find the answer. His canvass of the industry showed that the usual slump in orders was impending, and that no one was ready to suggest a stimulant.

His proposal was simple, and in line with popular demand. It was to cut prices to the bone—cut them actually under cost of production—and give the greatest possible publicity to the action. He proposed to force dealers to stock up during the Winter by convincing them that it would be profitable to buy with borrowed funds, if necessary, while quotations were at bed-rock.

To licensees, whose factory price of the strip shingle is controlled, this manufacturer proposed a cut from $4.85 per "square" (enough material to cover 100 square feet) to $4.25 on the strip shingle, and proportionate cuts in other prepared roofing products. The new prices would be 40 per cent. lower than high quotations for 1920, and would be actually below pre-war, or 1913 figures if pre-war freight rates prevailed.

It was proposed to link with the announcement of price reductions the logical and popular argument that by maintaining a flow of orders throughout the usual slack months, these results would follow:

First, factory organizations would be kept intact and tuned up for spring production.

Second, the manufacturers would assist materially in keeping down the volume of unemployment during the season when the jobless worker suffers most.

Third, tonnage would be kept moving on the railroads during an ordinary slack season.

Fourth, prices of other building materials would probably be lowered, and the expected stimulation of building would sooner take effect to relieve the housing situation.

It was further proposed to readjust prices following the first radical cut in accordance with a schedule somewhat as follows:

At the rock-bottom quotations, sufficient orders would be taken to keep factories running at full time during December—and at an actual loss. After the first advance in prices, additional orders would be accepted for January outturn—and on these manufacturers would break even. With dealers encouraged to buy in anticipation of spring demand and in-

BLUE PRINTS

evitably higher spring prices, quotations would be moved up so that the February output (still at capacity) would show sufficient profit to more than offset the losses of Demember.

At any rate, this program was laid out by the executive heads of the manufacturing company which took the initiative; and it was generally adopted by the industry. On December 6, announcement of price reductions was made; and because it was live news, papers all over the country gave it prominent display

A considerable number of prominent business men, bankers and Government officials were notified by telegram of the price reductions and the motives underlying the announcement; and many of them responded in characteristic telegrams and letters.

A telegram similar to that sent to Secretary of Commerce Hoover was answered by Col. Arthur Woods, who had been chosen by Hoover to be the working head of the President's Conference on Unemployment. Col. Woods wired:

"The action of the roofing manufacturers is as practical and patriotic a step toward relieving unemployment and starting up business right now as has come to the attention of the President's Conference on Unemployment up to this time. Similar action along other lines of industry would do a great deal toward providing work during the winter months; stimulate out-of-season activities and blot out the shadow of prospective bread lines and soup kitchens."

"Similar action on the part of other manufacturers," wired James B. Forgan, head of the First National Bank, Chicago, "would do much to diminish unemployment and consequent suffering during the coming winter and thus also prevent growth of radicalism."

Others who publicly approved the purposes of the price slashes were Charles H. Sabin, chairman of the Board of Directors of the Guaranty Trust Company, New York; W. C. Teagle, head of the Standard Oil Company, of New Jersey; Daniel G. Wing, president of the First National Bank, Boston; F. O. Watts, President of the First National Bank, St. Louis; Roger W. Babson, the business and financial statistical expert; W. F. Ramsey, head of the Federal Reserve Bank at Dallas, and F. Edson White, vice-president of Armour & Co. In his telegram, Mr. Teagle said that his own company had reduced prices on bituminous products, which enter largely into the manufacture of prepared roofing, 34 or 42 per cent. compared with middle-of-December prices, 1920. His further comment is of interest:

"Whether or not this reduced price can be maintained is dependent upon the action of the Mexican Governmen in respect to taxation of crude petroleum from which these products are derived."

It was the expected that happened. Manufacturers of asphalt roofing generally fell in line with the reasoning of the leader; and throughout the industry prices were cut not only on the patented strip shingle, but on every other important line of asphalt roofing. And within forty-eight hours after the announcement of the reductions, orders had poured into the factories in excess of the most optimistic predictions.

Manufacturers are running full time, and expect to carry on full handed during the entire period of normally slack production. The first small increase in quotations failed to check the flow of orders; and the activity of the roofing plants has been reflected in abnormal winter production of felt mills and other producers of the raw materials of prepared roofing.

Best of all, a state of mind favorable to the immediate forwarding of residential building and roof repairing (rather than patching) has been created. Manufacturers in this industry are cordially recommending this courageous, surgeon-like cure for the winter depression which comes from decreasing output and dishearteningly continuous "overhead."

* * *

THAT construction can go forward in spite of winter weather is assured when we review the results of the President's Conference on Unemployment. Due to the Conference, an unusual amount of out door work has been planned by City and State officials in order to provide work for the unemployed.

"Although the returns are incomplete," says Colonel Arthur Woods, chairman of the standing committee, "it is safe to estimate that several hundred thousand more men will be employed on public work this winter than last year, thus making up to that extent discharges from other industries. This is in line with experience in Canada, where much outdoor work on public projects has been done in winter to help the jobless.

Among the states now doing highway work are Alabama, Illinois, Kansas, Kentucky, Minnesota, Nebraska, New Jersey, North Carolina, Rhode Island, Washington and West Virginia. Winter bridge building is going ahead in Delaware, Illinois, Kansas, Minnesota, Missouri, North Carolina, and Wisconsin.

In Boston, Mass., sewer contracts are being let with the distinct understanding that work will begin immediately regardless of weather conditions, with a view to giving much needed work to many. New York City informs the Washington authorities that the laying of water mains

(Continued from Page 56.)

and repairs on pumping stations will be carried on irrespective of weather conditions, and work has been started on a new $360,000 pier. Cleveland, Ohio, has awarded its contracts on sewers so as to keep 250 men busy all winter long.

Passaic Valley sewerage commissioners, of New Jersey, have $850,000 of sewers under way, giving work to about 1,000 men. In North Dakota, hauling and road graveling will continue throughout cold weather.

Rhode Island has an extensive program of highway construction and its chief engineer of roads informs the Conference that all its large projects will be continued during the entire winter, unless heavy snows prevent.

* * *

THE effect upon the development of Philadelphia of the Zoning Ordinance now proposed by the Zoning Commission, will be so far reaching that it is to the interest of every citizen carefully to study the ordinance and the effect of similar ordinances in other cities. Intense interest has already been manifested in the ordinance, and meetings are being held where the pros and cons are carefully weighed, and expert opinion given and discussed. The Philadelphia Chapter of American Institute of Architects has declared itself strongly in favor of the Ordinance in the following statement:

"The zoning ordinance for the City of Philadelphia has at last become a live issue and is being openly discussed at a series of public hearings at City Hall.

"To many the idea appears as an experiment, the advantages of which are

but vaguely understood, but to those who are familiar with the advantages of comprehensive city planning as furthering the best interests of any congested community—the distinct benefits—of city zoning are very apparent.

"Zoning is not an experiment. It now exists in some sixty cities of the United States, and in no instance has it been withdrawn after its adoption. It is merely a cog in the attempt to improve city planning, and the larger a city grows the more essential a plan becomes. The Philadelphia Chapter of the American Institute of Architects has strongly urged the Mayor to appoint a City Planning Commision, and now even more than before this should be done, because the zoning of a city must work hand and hand with the comprehensive plan.

"The general benefits to be obtained by zoning may be briefly summarized as follows:

"First. The protection of residential districts from invasion by industrial establishments or inferior or incongruous improvements.

"Second. The defining of industrial areas and the provision of better connection and service between them and the rail and water terminals.

"Third. The control of the development of property for the purpose for which it is best adapted.

"Fourth. The limitation of the heights of buildings and the regulation of the light and air space around them.

"Fifth. The stability, permanence and economy of public and private improvement resulting from the pre-determination of the character of development in the territory to be served by them.

"Sixth. The stability of value existing or created through the harmonious development of a particular district.

"Seventh. Increased economy and efficiency of street improvement and the construction of public roads.

"Eighth. The simplification of the problems through foreknowledge of the distribution of population and trade.

"Ninth. The regulation of the occupancy and use of land in the interests of home-making, home-owning and home-protection.

"The zoning ordinance is so written that it is flexible and may be amended to meet changing conditions. It should be adopted on its present form and there should exist no doubt in the mind of progressive citizens that it is a mere far-sighted measure for the good of the community."

At a meeting held last week, Edward M. Bassett, counsel of the Zoning Commission of New York City, advocated the holding of a referendum upon the height limit question in the various localties affected. Mr. Bassett described the benefits derived by New York from its zoning ordinance. Fifth Avenue, for instance, has been rescued from the fate of becoming a garment manufacturing center, instead of a shopping district, because of the ordinance.

"But," said Mr. Bassett, "it is perhaps a bit unfortunate that you have an ordinance and maps placed before you and are told to study them here. In New York, we did things in the opposite manner, sounding out the sentiment of the people so that before the ordinance was effective they were actually imploring the commisson to place it in effect as early as possible. This plan that is before you is not final, but the commission should have the co-operation of the citizens in amending the ordinance and finally making it effective. Fourteen cities in the United States have zoning in effect and it has extended to other countries. If you effect zoning in a manner that confiscates, the courts will punch holes in it so that all concerned should work together to prepare a satisfactory ordinance."

"What would be the effect of the zoning ordinance upon the value of property at Fifteenth and Chestnut streets bought for the purpose of erecting unlimited-height buildings," queried Mr. Sinkler, City Architect of Philadelphia.

"If you had but one building of extreme height," Mr. Bassett replied, "it would be able to earn a high return because of the exploitation. But if all the surrounding buildings were erected to the same height, light and air would be taken from them, the rentals would drop and they would not earn a proper return. If you study the problem, you will say that any building more than sixteen stories in height is above the proper economic height.

"However, if the owners insist upon a height limit that would be too high and would only hurt their property, I would say give them what they want. They will soon regret it, and Philadelphia is such a vast city that it is not dependent upon one or two blocks for its development."

At a meeting of the Philadelphia Real Estate Board last week, E. A. Merrill, an attorney of Newark, warned against passing the ordinance without careful study and consideration. The test to be applied to every such ordinance, according to Mr. Merrill, is whether the particular law is necessary for the health, safety, morals or general welfare of the community.

"If applied with common sense and judgment," he said, "zoning will, after the first shock, stabilize values; but it involves a radical extension of the theory of police power, and it may be the wiser course to proceed cautiously in extending further over property and personal rights, a governmental control so easily subject to abuse."

Mr. Merrill does not believe that zoning ordinances in New Jersey towns are all unqualified successes, and in many instances, amount to purely class legislation, and are therefore "dead wrong in principle."

"When ordinances go to such lengths as would keep a doctor from putting a 'conspicious' sign on his house or a man from allowing his newly married son and bride from living in the same house some irascible individuals are going to get hot under the collar and inquire sarcastically if the Declaration of Independence has been repealed," he declared.

* * *

BUILDING contracts awarded in December, in the territory east of the Missouri and north of the Ohio Rivers totaled $198,518,000 in value. In normal times the December total is less than the November total. December, 1921, was 3 per cent. higher than November and it was 98 per cent. greater than December, 1920.

Since July, 1921, the monthly totals on contracts awarded have been, each month higher than the corresponding month of the previous year. In other words the so-called seasonal slump was far from being as general and as intense as in other years.

That ought to make the building industry "sit up and take notice," There will be those who will throw their hats in the air and let out a yell. In the back of their minds will be the thought of big profits; of an active market and keen competition for the builders' service. If they like to look on that sort of a mental picture they may be in for more of the sad experience which caught up with us in the last half of 1919 and the first half of 1920.

Present conditions forecast a substantial quickening of the building business in 1922. The limit of the revival will be fixed in large measure, by the sanity and vision of the material men, contractors and labor. If a majority of these, or if even a considerable minority forgets that unrestrained profit grabbing was an important factor in the determined slump which set in in 1920 and continued with fluctuations until July of 1921, our general building revival will no more than begin before it ends. The greatest danger to a favorable building year now is the possibility of another season of mounting prices.

The building public is wary and suspicious. Any marked increase in the total cost of construction will be qiuckly noted and, having discovered the efficacy

of a buyer's strike, the public will be quick to resort to that weapon in the face of a soaring market.

There is evidence that some prices are too low and with a quickened demand these may be expected to advance. These advances ought to be offset by recessions on such prices as now are too high when compared with the general price level. The average cost of construction, in the interest of the entire industry, ought to be kept pretty close to where it now is and in order to keep it there the merchandising elements in the industry must resist the temptation to advance prices beyond the figure which provides a fair margin of compensation.—*American Contractor.*

* * *

How many persons are engaged in preventing accidents and promoting good health in the construction industry! Although it is known that this industry has made great strides in safety work in the past few years and accomplished great things, there is nothing to show how many men and women have been responsible for this work in the industry as a whole. The National Safety Council is now taking a census which when completed will reveal how many safety workers there are, who they are, and where they are located. This census will include all the persons engaged in safety and industrial health activities in all industries, and those who are doing public safety work as well. The results of the census will show how the construction industry compares with the other industries in respect to the number of persons it has engaged in safety and health work. It will give a good indication of how extensive the safety and health activities of construction companies all over the country are. This is the first time that any attempt has ever been made to list the thousands of people who are now professionally engaged in the safety movement. The census includes not only members and employees of members of the National Safety Council, but all persons engaged in safety and industrial health activities regardless of whether they are connected with the Council in any way or not.

Every reader of this publication who is professionally engaged in industrial or public accident prevention or industrial health work—whether he is devoting all or only part of his time to accident prevention—is urged to assist in the taking of this census by sending to the National Safety Council, 168 North Michigan Avenue, Chicago, his name and the other data requested in the Council's census form which is reproduced on this page.

It is expected that when the job of taking this census is completed there will be registered at the headquarters of the National Safety Council in Chicago the name of every man and woman responsible for the safety work of every industrial plant, public utility, municipality, and every organization which devotes any part of its efforts towards the promotion of either industrial or public safety, in the United States. Up to the present date there has not been in existence any data to show how many persons are engaged in this work either in any single industry or class or in the country as a whole.

Industry in general and the nation at large will profit from the results of this census. It will enable the Council to quickly find speakers on industrial and public safety for any occasion in any locality; authors for special articles on accident prevention; writers of safety textbooks; lecturers on accident prevention and industrial health work for universities and colleges. The Council at present continually receives requests from industrial companies, municipalities, civic associations, clubs, schools, colleges, and other organizations for help in finding speakers or writers on safety subjects. The Census records will greatly increase the facilities of the Council for filling such requests.

Following is the form which all safety workers are requested to fill in and send to the National Safety Council for filling such requests.

Following is the form which all safety workers are requested to fill in and send to the National Safety Council, 168 N. Michigan Ave., Chicago.

Name .....
Company or organization .....
City ..... State .....
Nature of company's business .....
Is safety your principal work .....
Please check other activities you engage in: .....

- Fire protection
- Health and sanitation
- Workmen's compensation and claims
- General executive (such as manager or superintendent
- Engineering (other than safety)
- Legal
- Insurance
- Welfare
- Educational
- Industrial relations

How long have you been in your present position? .....
Technical or other special education? .....
Signed .....
Title .....

We'll *write* your advertising without charge. **All we ask is that you pay for the space and provide our ad. man with the necessary selling pointers.**

Business is founded on reciprocity and co-operation. Any other plan than this spells bankruptcy. The successful business nowadays has a heart and a soul.

Don't crowd your space, Mr. Advertiser. Better play up one selling point at a time than to try to get everything into one ad. and kill every possible chance for display. An ad. should stand out. It should be easily read. It should draw the attention of the reader. A carload of detail can't be crowded into a few inches of space and still retain the quality of sticking out as all good advertising should.

All advertising pays—even that which is poorly constructed. A bad ad. is better than no ad. at all. It is worth all that it costs in the competitive world of the present day, merely to keep one's name where the possible buyer cannot help seeing it To be out of sight in the commercial world is to be out of mind.

To be poor in a wealthy country, to be sick in a good climate, to be inefficient among a progressive people, is a sign of unwise educational methods. Such people were not taught to battle with the world or meet life's emergencies.—Thoreau.

America stands supreme in the development and use of advertising, and advertising is the seed which by implanting desire produces the fruit of social advancement. Education promotes efficiency and efficiency in turn makes possible higher earning power, higher purchasing power and improved living conditions.

The man who starts out with the idea of getting rich won't succeed; you must have a larger ambition. There is no mystery in business success. If you do each day's task successfully, stay faithfully within the natural operations of commercial law, and keep your head clear, you will come out all right.—John D. Rockefeller.

An old legend tells of a magician's vase; the magician could get out of it only that which he put in. Advertising is just that If you don't get into it the "kick" of salesmanship it is going to miss by just that much the pulling power it ought to have.

A certain wallboard man advertised in the Guide for awhile and then dropped out. We've had a dozen inquiries since then, asking for his address—every inquiry from a cash buyer. This is a common occurrence. It's hard to make some advertisers see the vital importance of a standing "ad."

Ideals are like stars; you will not succeed in touching them with your hands, but like the seafaring man on the desert of waters, you choose them as your guides, and, following them, you reach your destiny.—Carl Schurz.

Home building in the forty-three weeks since February 25, 1921, when the tax exemption ordinance went into effect, has increased 413 per cent. over the same period in 1920, Henry Curran, retiring President of the Borough of Manhattan New York and sponsor of the tax measure, reported recently.

In that period plans were filed for new homes for 56,592 families, at an estimated cost of $269,361,284. Of that number 32,413 families will live in one and two family houses, while apartment houses will take care of the remainder. On January 1, 1921, it was estimated there was a shortage of 100,000 apartments.

* * *

INCREASING EFFICIENCY OF CHIMNEYS AND FIREPLACES

The fireplace is the heart of the home —and yet, how many smoky fireplaces there are, driving their disgusted possessors to less picturesque but more efficient ways of keeping warm. The smoking pireplace and the unsatisfactory operation of other heating arrangements are often due to a poorly constructed chimney, the United States Department of Agriculture points out in a new Farmers' Bulletin, No. 1230, Chimneys and Fireplaces, How to Build Them, by A. M. Daniels of the Bureau of Public Roads. The common faults in chimney construction are discussed in detail, and exact directions are given for building chimneys of suitable dimensions and materials. The correct location and size of flues are indicated, and other information is presented in a clear form.

Good draft in the chimney is necessary to efficient operation. Attention is drawn to the fact that a chimney must extend about 2 feet above the ridge of the house if it is to have a good draft. All chimneys should rest on masonry foundations in the ground. The shape and size of the flue is very important. Round flues are to be preferred, but rectangular ones are usual. A table is given, showing the proper relative diameter of the smoke pipe, flue, and the height of the chimney.

The problem of the smoky fireplace is also dwelt upon from the standpoint of fireplace construction. The need for a throat equal in area to the arena of the flue is explained, and emphasis is laid on the importance of a smoke shelf about 8 inches above the throat of the fireplace.

An entirely new application of a simple heating principle in connection with fireplaces was patented by Joseph Parsons, of Lakeville, Conn., and the patent afterwards assigned by him to the United States Government. Instead of supplying the fire with oxygen from the cold air flowing in through cracks around windows and doors, the inventor suggested making the house as air-tight as possible and supplying the necessary oxygen through a special opening in the chimney, placed in such a way that the in-coming air would be warmed by passing over and around the fire. An extension of this idea is the provision of an extra warm-air flue which would carry fireplace heat to a register in the coldest part of the room.

Particulars of constructing an ordinary fireplace properly, and for installing a warm-air flue for improved fireplace heating, are described in the bulletin which is free upon application to the Department of Agriculture.

* * *

SALAMANDERS

MANY different conditions assist or retard building construction in the winter and some of these items are quite often overlooked.

This is true of the insignficant looking salamander which to a person not acquainted with its value has no importance, but after a contractor has invested possibly several hundred thousands of dollars in a very extensive concrete construction undertaking and during a sudden change in the weather has probably lost more over night than he will make in the next few years, he realizes how important it is to make every effort to be reinforced on all sides against losses of this kind. This is where the salamander is really of inestimable value, and when the cost is considered and the work it will do, it seems amazing that every contractor does not have a large supply on hand for use in emergencies. These salamanders while cheaply constructed are very durable. It is not necessary that they be connected with any particular outlet; they will burn almost anything and give out a large radius of heat. Their construction is practically fool proof; anyone can assemble one of these salamanders and keep it going day and night if necessary without any special instruction.

One of the main reasons for the use of the salamander is to have these located between floors where concrete pouring is going on in the winter. After the men have left, these salamanders are fired up for the night and the local watchman can take care of them at stated intervals. The salamander maintains a certain heat throughout the night so that the action of weather will not cause any disaster and in the morning everything is all set for further construction.

Where the work is carried on in three shifts of eight hours each, the salamanders also are used extensively and not only keep the atmosphere at the proper temperature to prevent freezing of material, but also keep the men warm and comfortable, at least as comfortable as is necessary for men who are receiving a certain amount of exercise.

The salamander is of heavy steel construction, cast iron grate with bar iron legs. It will burn coke, coal, wood and scraps of all sorts. It can be set up or taken down in a jiffy. They will nest ten to a bundle and crate, and are equipped with hood over top. Remember that a salamander is a most necessary article to all contractor outfits and remembering that there are several on the market, it is well to select carefully the type you are going to use, and when you order be sure that you will be able to get your requirements at once.—*National Builder.*

The other day a prominent local architect called up to inquire regarding a concern that has not advertised with us for two years. "I saw their ad. some years ago in the Guide," said the architect, "and am unable to recall just where they are located." We gave him the address and learned subsequently that as a result the firm bagged a big order. How many similar orders, from architects who wouldn't take the trouble to look them up, that same concern has missed in the course of the past two years it would interest us to know.

There is not a business one can think of, which is not full of little temples where one can curse or pray. Every business that one knows has its host of light in it, fighting against its host of darkness; one set of men conducting the business as if they and the public were engaged in a sort of mutual enthusiasm and daily service, with permanent success as the goal; and another set of men whose success is ruining the business to which they belong, and the public besides—and themselves.

Advertising is telling who you are, where you are, and what you have to offer the world in the way of service or commodity.

If nobody knows who you are, or what you have to offer, you do no business, and the world is the loser through giving you absent treatment.

Life is too short for the consumer to employ detectives to ferret out merchants who have the necessities of life to sell.

When you stop to consider that the Guide reaches every week and is read by architects, builders, building owners, contractors and sub-bidders in every branch of building construction, you must perceive its unique importance as a medium for advertising with an appeal to that class. Every copy reaches a live prospect.

The "Builders' Guide" is in its thirty-fifth year of continuous publication.

As The Editor Sees It

THE Construction Industry has been looked on in the past as a very practical instrument rather than as a medium for idealism. Not that the possibilities for ideals were not there, but they have not been to any great extent realized and developed. The Associated General Contractors of America, whose organization held its Third Annual Convention in Cleveland, Jan. 17-19, was born with a desire to lift the Building Industry to a higher plane. The Presidential Address by Arthur S. Bent was fraught with the spirit of idealism, and the report made by Gen. R. C. Marshall, Jr., general manager of the Association, showed the great progress made during the past year.

* * *

A DEFINITE assurance that construction recovery is under way and that it is the first phase of a general business revival sums up the results of the construction conference. Evidence of this fact, both statistical and informal, abounded in the discussion of the delegates and in the papers presented as a part of the program.

Col. Leonard P. Ayres, who was chief statistical officer for the A. E. F., and who is now vice president of the Cleveland Trust Company, expressed the belief that prices will continue to fall, intermittently, for ten or twenty years more, but conveyed assurance that the construction industry will be immune to many of the embarrassments of the coming period, because it supplies a market in which there is a latent demand equal to 2¼ years normal production of building.

"In other words," said Col. Ayres, "construction can go along for nine years at 25 per cent. above normal and only fill the normal demand by the end of that time."

Col. Ayres said that building finance problems had commenced to adjust themselves, through greater abundance of money. "The acrimonious discussions between yourselves as contractors and ourselves as bankers are about over," he remarked: Within six months so much money will be for borrowers that owners will be able to arrange building loans on pre-war terms."

Charts shown by Col. Ayres indicated a sub-normal volume of building for every year since 1912. Even the apparent large bulding figures for 1919 and 1920 were only apparent, he declared. The cost was large but the building was far behind even the current needs of the time. The only time in the last nine years when the volume has gone above average requirements was for the last few weeks of October, 1921. This was chiefly residence building, but it shows in Col. Ayres opinion that the tide is rising rapidly. He declared that building prosperity is always the first phase of general revivals and that it disseminates prosperity more widely than any other type of activity.

Determined not merely to predict prosperity, but actually to observe it, the constructors arranged a program in which the theme of waste elimination was constantly emphasized.

J. Park Channing, of Boston, who succeeded Herbert Hoover as chairman of the Federated Engineering Organizations, gave the major paper of the conference on this subject and said that 25 per cent. of the responsbility for waste rests on labor, fifty per cent. on management and the remaining 25 per cent. on outside relationships. In respect to industrial accidents, however, he asserted that 85 per cent. of the responsibility rests on the individual workman.

Constantly changing personnel is a case of waste treated by the speaker and he recommended measures to increase the period of active work so that employment will be more nearly an annual affair. He expressed faith in the method of reasoning with employees rather than ordering them, when labor emergencies are encountered. Material control was treated as a major time saving proposition in the building business.

F. L. Cranford, of New York, former government director of the Muscle Shoals nitrate plant, discussed a 20,000 mile trip taken by officers of the Association in the interest of construction revival. He expressed the opinion that labor has reached pre-war efficiency and that the chief retarding factor is the general be-

DRAWING MATERIALS | **CHARLES H. ROBBINS, JR.** 1209 Arch Street, Philadelphia BELL PHONE, SPRUCE 1256 KEYSTONE PHONE, RACE 3519 | **BLUE PRINTS**

lief that material is too high "particularly materials controlled by national associations that meet behind closed doors."

Cost-plus contracts, fee contracts and efforts made in some projects to eliminate the general contractor were discussed. D. A. Garber, of New York, voiced the belief that few architects and engineers can qualify to direct a building project in the place of the general contractor. Godfrey Edwards, of Los Angeles, decried anything but lump sum contracts, believing that when a builder takes a job on a cost plus or a fee basis, he is paving the way for his own elimination.

The conference acted favorably on the Kenyon bill, to create a reserve fund that will stimulate construction in depressed periods.

Otto T. Mallery, from the department of commerce, urged that ten per cent. of all public construction funds be set aside in such a reserve, each normal appropriation for that year.

Other speakers at the convention were Ernest T. Trigg, of Philadelphia, President of the National Federation of Construction Industries, whose subject was "Co-operation in Construction," and Col. Evan Shelby, New York attorney, who was formerly legal advisor to the construction division of the army, who spoke on "Organization in Construction."

"The opportunity before the construction industry is very great," Mr. Trigg said, "if and when the public's confidence is secured.

"We have passed the stage when the employers and the employes can get together with themselves, and with each other, and determine the affairs of the third party, the public. The public has come back into its power.

"But, until we come to where the public's confidence is restored, construction is not going to revive."

"The obligation rests with the leaders in the construction industry to clean house," Mr. Trigg emphasized. They must, he said, see that the customs of the trade which hold up costs and neutralize the effects of competition, be done away with. They must also, he said, take the initiative in promoting more cordial and economical relations with their workmen.

"You must not take advantage of the fact that now you have the whip hand," Mr. Trigg asserted. "By taking the broad view of things right now, you will bring about a condition of peace in industry where both you and your employes will share in ungrudged prosperity."

Col. Shelby outlined the steps by which the general contractors were organized for the first time during the war, an organization which preceded the one just closing its convention, and pointed to the accomplishments of its short existence as forecasting the progress which will be realized by simplifying the forms of contract, promoting research in industrial methods and improving the relations of the contractors with the material dealers and workers.

* * *

IDEALISM IN CONSTRUCTION

BY ARTHUR S. BENT

President Associated General Contractors of America, At the Third Annual Convention, Cleveland, Jan. 20, 1922

The industry that we represent is not alone very great; it was the only hope of a shattered world lying almost in ruins only yesterday. Men may fight and destroy for a time, they can build forever, and the very continuity of life itself depends upon construction.

In thinking of our A. G. C., I have wondered if sometimes you thought that I was too much of an idealist. It is a profound truth that no institution can continue to exist without genuine moral worth. If that is true, then the measure of our vitality will be our moral worth. If the A. G. C. should ever stand for being served rather than serving, for having rather than being, for getting rather than giving, then it will cease to achieve any success that will be worth our time and effort.

But that has not and never has been the spirit of this organization, and please God it never will be! Victor Hugo tells us that the world lets everything die that is moved by selfishness, and the reason the A. G. C. is such a lusty young giant tonight is because it is inspired with a spirit of unselfish co-operation between ourselves, a desire to serve our public more worthily and a purpose to lift our craft to higher levels of integrity and honor.

There is a very beautiful legend, an impressive one, I think, so old that its origin is lost—I have never been able to discover it. It goes like this: Four men stood up with God when He made the world, and watched with wonder as the shimmering sphere flung from the fingers of Omnipotence found the place in the shining galaxy of stars, and one of the men said, "How was it done?" And God said to him, "Go, find out for yourself." And that man went and became a scientist.

And the second man said, "What is it for?" And to him God said, "Go, find out for yourself." And he went and became a philosopher.

"Give it to me," the third begged. And to him God said, "Go, possess it for yourself." And he went out and became the business man.

The fourth said nothing but fell down and worshipped, and God said to him, "You, too, shall go, and because your

Evans, Inc., 109 North Thirteenth street, and J. B. Kelly, 2313 Walnut street, are figuring.

There is not a business one can think of, which is not full of little temples where one can curse or pray. Every business that one knows has its host of light in it, fighting against its host of darkness; one set of men conducting the business as if they and the public were engaged in a sort of mutual enthusiasm and daily service, with permanent success as the goal; and another set of men whose success is ruining the business to which they belong, and the public besides—and themselves.

Woodoleum Flooring

You are safe when you buy a Woodoleum Floor.

You get an absolute and unqualified guarantee. You get a concern which is the pioneer in this line of floor coverings.

There is but one Woodoleum—accept no imitation.

Roots, Ark.; U. S. P. H. S. Hospital, Ft. Walla Walla, Wash.; U. S. Quarantine Station, Hoffman's Island, N. Y. Specifications may be obtained at this office in the discretion of the supervising architect, Jas. A. Wetmore, Acting Supervising Architect.

(Continued from page 72)

soul burns within you, you shall create beauty," and that man went and became the artist.

Now may we not reverently and not unfittingly, add to this noble group of God's journeymen the constructor? We who forerun and always have all the others? We, who have straightened the path for their feet? We, without whom their high destiny could not be wrought out, and by whom all their visions are crystallized? We work and delve for science in its onward march, and harness its magic to ways of usefulness. The bewildering and marvelous structure through which business functions is the work of our hands. Philosophy leans upon us heavily to demonstrate its theories of life and even to art we give its tools and make its dreams of beauty imperishable.

We are the hands through which nearly all of human thought and all material progress are expressed. Through our highways and railways and lighting and heating and temples and schools and homes, we touch all life intimately, and come very close indeed to the heart of humanity, and with that vital and varied contact comes to us an impressive but inspiring responsibility. It is given to us, if we see it rightly to raise the standard of every man's service by the fidelity of our own.

I make no apology for such idealism in an organization like this because whatever our industry is today is the sum total of the thoughts that all the contractors in the world have about it, and it never will rise above that level. And as that level advances to higher planes of integrity and service, we shall travel further and further away from the stigma of sordidness which has clouded our history in the past, and it is given to the A. G. C. to carry that bright banner in the very vanguard.

Of course ethical achievement is not statistical. We can't measure our progress along those lines. Nevertheless, I firmly believe, and you do, too, that it will be our real, our most profitable progress, and the span of our activities is not limited to our own present interests.

We are trying to make contracting a finer thing for those who will come after us. We are consciously sowing seeds which will be harvested by those whom we can never know. Is there any finer thing in life than that?

I will just leave with you that thought, expressed again in a homely little poem called

THE BRIDGE BUILDER

An old man, traveling a lone highway
Came at the evening cold and gray,
To a chasm deep and wide.
The old man crossed in the twilight dim,
For the sullen stream held no fears for him,
But he turned when he reached the other side
And builded a bridge to span the tide.
"Old man," cried a fellow pilgrim near,
"You are wasting your strength with building here
Your journey will end with the ending day
And you never again will pass this way.
You have crossed the chasm deep and wide,
Why build you a bridge at eventide?"
And the builder raised his old gray head,
"Good friend, on the path I have come," he said,
"There followeth after me today
A youth whose feet will pass this way.
This stream, which has been as naught to me,
To that fair-haired boy may a pitfall be.
He, too, must cross in the twilight dim,
Good friend, I am building this bridge for him."

Thank you.

WASTE IN INDUSTRY

An Address Delivered by J. Parke Channing at the National Convention of the Associated General Contractors, Cleveland, Ohio, January 18, 1922

In assigning the relative responsibility for waste, 50% of this responsibility has been placed at the door of management, and less than 25% at the door of labor. In assessing this responsibility, there has been no purpose or desire to place blame upon any individual, group or class. Waste, like industry itself, is the result of a slow growth, but undoubtedly the greatest opportunity today for correcting it, is in the hands of management. By management is meant all of those engaged in industry from foremen up to the financial heads of the concern. The importance of management has been shown by that terrible experiment conducted in Russia, in which an attempt was made to carry on industry by the workman himself. It has failed miserably and now its protagonists are asking that technical men come into Russia to re-establish its industries.

The causes of waste may be generally classified under the heads of Low Production, Interrupted Production, Restricted Production and Lost Production. Low Production is caused by faulty material control, faulty design control, faulty production control, lack of cost control, lack of research, faulty labor control, ineffective workmanship and faulty sales policies. Interrupted Production is caused by idle men, idle material and idle plants. Restricted Production comes about either by restrictions of the owners of management or by labor. Lost Production is largely due to ill health, physical defects and accidents.

The recent Conference on Employment makes suggestions toward correcting interrupted production due to idle men. Probably of all things this is the most vital. It is unfortunate that in a country like the United States we should have idle men when we have such rich resources and such demands for finished goods. A large portion of this unemployment is due to booms and depressions, and while we do not thoroughly understand the causes of these cycles, we are getting nearer and nearer to the truth, and I believe that we can look forward to a time when the peaks and valleys will be nearly leveled out.

The one thing, to my mind, that stands in the way, is a psychological one, and that is that when we are in a boom period we fail to realize it, imagine conditions are normal and that the real boom is ahead of us. It is only a few far-sighted and sound-thinking men who realize the actual condition. It is incumbent upon owners and managers to study this question thoroughly to see that information is collected and distributed and to properly interpret it.

I believe that proper industrial relations is one of the most important factors in stabilizing industry. Professor John R. Commons, of the University of Wisconsin, has very properly said if all managers and owners treated their men fairly there would be no need of labor unions, but because owners and managers have not followed the Golden Rule, the laborers have been forced to organize for their own protection. I believe that in well stabilized industries where the changes in personnel are at a minimum there is less friction between management and labor. In industries of this class men get to know the management and the management to know their men. Their peculiarities and indvidualities, their capacities for particular kinds of work are realized and the results are generally good.

One reason that there is so much waste in the building industry and so many restrictions on the part of labor is the constantly changing personnel.

Following along this line, you will note that the Committee assesses 25% of preventable waste as against outside contracts; for example, the public. And this means that the public itself must be educated to the necessity of a smooth and regular operation of industry, and must not demand the impossible and must realize that everyone cannot have his wants filled at the same time.

In adopting a program of seasonal construction in different geographic divisions of the country, I, of course, realize that there is a serious problem in attempt-

ing to move labor from one part of the country to the other. A competent mechanic usually has his home in some town and dislikes to move from place to place, but there is a possibility that a certain proportion of the men, particularly those unmarried, may follow this plan.

Among the things which the Committee recommended is proper production control so that material always will be on hand and delivered when needed; that the plant and equipment should be kept continually in working order; that one should have a uniform system of cost accounting and particularly that the methods of wage payment should be equitable and just in pursuing the proper relationship between the efforts put forth and results achieved by all who participate in the enterprise. All of these recommendations seem perfectly obvious but it is astonishing the number of instances in which they are neglected.

Especial attention was called to the fact that wage methods are wholly futile in the absence of standardization and system in the work. In a great many cases, proper production standards and proper control of the work will, without any special wage method, accomplish a large part of the desired result.

Management is also responsible for the prevention of accidents in industry and a "safety first" campaign not only has its humanitarian effect, but results in an actual saving in dollars and cents. This, of course, is recognized in the various workmen's compensation acts in which the cost of death and accidents is directly paid by the industry and becomes one of its charges. The lower this charge, the less will be the cost of production.

Among the responsibilities of labor is that of increasing production. Among the unenlightened, the idea that there is a fixed amount of work to be done in the country, and that the less a man does the longer the work lasts and the more men are employed is of course an economic fallacy, but is held by a great many men. There never was a greater fallacy than this, and I am glad to say that the best minds in labor circles realize its fallaciousness. Still, it must not be forgotten that labor has had many sad experiences in the last eighty years in which the result of increased effort, both mental and physical, has not been rewarded as it should be, but has been entirely appropriated by capital.

The government can give aid in the elimination of waste, and the most important thing is the establishment of a national Industrial Information Service, so as to furnish accurate and timely information on production, consumption and stocks of commodities. In addition, I believe that the government could with propriety establish an Employment Service; perhaps not distinctly under federal control, but at least correlating the employment services of the various States. There seems to be a feeling that this is a legitimate field for the government and one which should not be relegated to private individuals.

There is also the suggestion that the federal government should organize a plan to adjust disputes in general industry, and you will recall as a result of this, in the early part of 1920 the President of the United States called an industrial conference, of which Mr. Herbert Hoover was Vice Chairman. The suggestions of this conference seem sound, but for some reason they have not been followed. Why, I do not know. It should be borne in mind that this conference did not advise compulsory arbitration; in this, I think they were wise, because, if I judge correctly, the results of compulsory arbitration in Australia and New Zealand has not been satisfactory. It is interesting to note, however, in the report of Waste in Industry, that the losses due to strikes and lockouts are nowhere near as great as people have imagined.

Undoubtedly the government can help in the elimination of waste by putting into effect a national policy regarding public health. Many industries look out for the health of their employees, but curiously enough in a great many cases labor is opposed to physical examination of employees. Only a campaign of education will overcome this prejudice. A careful man knows that he should be examined by his physician at least once a year, so that physical defects may be caught in time, and there is no reason, or rather there is every reason why every man in the country, be he a brain-worker or a worker with his hands, should be periodically examined and advised of his condition and the steps that he should take to make himself efficient.

We need industrial standardization and fortunately in this respect the Bureau of Standards of the Department of Commerce, under Mr. Hoover, is doing excellent work. In addition, various engineering societies are working on standardization, and are co-operating with the Bureau of Standards.

There is undoubtedly a deisrability that certain of the federal laws should be revised so as to permit closer co-operation. In coal mining for example stabilization cannot be obtained except through the proper co-operation of the large consumers, the railroad, the operators and labor. Probably, of all the major industries, there is not one so badly organized as that of soft coal mining. It is over-equipped, both as regards plant and personnel, and the soft-coal miner, instead of being able to get 300 days of work as he should, gets, I believe, about 190, and this means that there are altogether too many men ready to mine coal, and that part of them should be diverted to other industries and the balance assured regular and continuous work.

I believe that the one thing the Congress of the United States can do to reduce waste in industry is to modify the anti-trust laws so as to permit consolidations now prohibited. A certain supervision would have to be exercised, permitting a fair return on the investment, adequate allowance to capital and management for the risks taken, but looking out that the natural resources of the country were conserved and the consumer not overcharged.

BRICKLAYING MAY BE SUCCESSFULLY DONE IN WINTER

BY GEO. W. REPP

THE problems attending bricklaying during the winter may be divided into two classes: first, those that have to do with the comfort of the workmen and, secondly, those that affect construction work itself.

The first group is the most important, as it is a well-known fact that a comfortable workman is more efficient than one who is not. If protected from the wind and cold, the men will work on much colder days, and the increased number of brick they will lay will more than compensate for the cost of their protection.

It is quite general among architects to specify that no brick shall be laid when the temperature is below 20 deg. Fahrenheit, or 12 deg. below freezing point, although brick can successfully be laid at lower temperatures if proper precautions are taken. Large building operations are rarely stopped when the temperature is between 20° and freezing and the methods employed on large work may be easily adapted to smaller jobs. Freezing weather therefor. should not stop brick construction of any kind if the suggestions set down in this article are observed.

Wind Shelter

In the construction of foundation walls the men work from the inside of the excavation and are not affected by the wind. If it is too cold, a few salamanders in the cellar will make things comfortable. As the wall rises above grade, when the wind strikes them, they may be protected from the wind by an easily constructed shelter consisting of a tarpaulin over a framework of 2x4 in. scantlings erected a few feet behind them. Here also will be useful not only salamanders to warm the space between wall and shelter for the men, but to help along the drying and setting of the mortar. If a vessel of water is attached to the side of the salamanders where it will be hot, it will be found a great help in keeping the

trowels warm and clean so that the mortar may be handled more easily.

When the first floor is in place the same tarpaulin shelter can then be moved to the floor of the house along the leeward wall and placed behind the workmen. A completed wall on one side of the building, provided the openings are closed up, will naturally make a fine shelter for the men at work on the other walls.

The use of a tarpaulin shelter is principally for protection from the wind, the worst element with which the men have to contend. On calm days it need not be used. As soon as any floor is in place, the openings of the story below may be temporarily closed and salamanders placed inside to dry out that portion.

Protection of Materials

This much for the protection of the men. As to materials, when the temperature falls below 32 deg., or there is a possibility of it doing so during the night, all materials, including water, should be heated thoroughly before being placed in the wall. If this is done, the mortar will take its initial set before it freezes and no damage result. If the mortar freezes before setting takes place, it loses its strength and results in a weakened wall. Sometimes the mortar freezes just on the surface of the joints, as rapidly as it is placed, so that the joints cannot be struck or otherwise finished. This does not hurt the strength of the wall in any way, and if the mortar thaws out within 24 hours, the joints may then be struck or repointed. It is the freezing of the wall throughout that must be guarded against and this is accomplished by the heating of the materials.

The face bricks should be dry in every cold weather and heated if possible by a salamander or two at the pile, and when carried to the scaffold piled around salamanders to keep them warm for the bricklayers. Common bricks may be heated by a wood fire built over or around the brick pile. Sand may be heated by piling it over a corrugated sheet metal culvert or steel pipe about 20 inches in diameter and about 10 feet long, in the ends of which a wood fire is built. This simple and easy method will melt all frozen lumps in the material. On large work where steam is available, a steam main with several branches open at the ends may be used under the sand in place of the wood and fire and the culvert.

Where city water pressure is available, the water may be heated in a coil attached to the main and large enough to have a fire built in the center, a very simple and efficient method which any plumber can easily install. Place a sheet-iron guard around the coil to conserve the heat. This equipment proves very satisfactory, as it warms the water as fast as it is drawn off through the hose. The entire installation may be found on the market at a comparatively small cost. Without such arrangement the water may be heated in an ordinary iron kettle over a wood fire. Water should never be heated to the boiling point, as too high a temperature will injure the properties of the mortar. A temperature of about 165 deg. or the same as generally required for household uses is best.

Cement-lime mortar is the best for winter work. Lump lime is better because warmer than hydrated lime, but it must be thoroughly slaked and allowed to cool off before using. Never use hot lime freshly and incompletely slaked for the sake of its warmth, as it will continue to slake and disturb the mortar after it has commenced to set, and will decrease or ruin its strength.

Salt is sometimes used, in mixing mortar, to lower the freezing point, but its use should be discouraged. It causes effloresence on the face of the wall when the work dries out and it keeps the mortar damp for a longer period than it would be without it.

For salamanders the best fuel is coke. Wood makes too intense and irregular heat, besides giving off more or less smoke. Coal gives off a gas that is not pleasant, but coke is recommended as the cleanest fire, requires little care, and is almost negigible in cost.

Cares of Walls in Freezing Weather

Regarding the care and construction of walls in freezing weather, it may be said: The footings should never be laid on frozen ground, so that if necessary, the ground should be thawed out by wood fires before placing the footing. It should then be protected from any frost which might work under it, by a banking of fresh manure which should be maintained until the building is closed in. As it is always desirable to backfill the foundation walls as soon as possible, this may be done after the wall has been waterproofed, provided the filling is loose and will pack well. If, however, it is frozen into lumps, it is best to leave the filling until later.

Walls laid in freezing weather should not be carried too high in one day. It is better to work around the entire building, a few feet in height at a time, rather than work on one side and carry the wall six or more feet high. Walls erected by the latter method have been known to get out of plumb from the effect of a freezing temperature on one side and the warmth of the sun on the other.

It is imporant to keep the wall backed up as rapidly as the face brick are laid. If not, the face brick, as in summer work, would be exposed on both sides with the possibility of the mortar freezing before being backed up. The backing when laid would then confine the frost to the middle of the wall. Brick veneer work should not be laid up in very cold weather. In fact, it is not necessary, as it can be placed in the spring without affecting the interior completion of the building.

The walls and scaffolds should be covered every night. The covering for the wall, such as tarpaulins or building paper, should be water tight to keep the top of the wall dry in case of a sudden thaw and rain, and should, of course be such that water cannot run off onto the face of the wall. The scaffolds, if on the outside, should be protected to prevent dirty water splashing or running onto the face of the wall. After a snow storm the snow should be cleaned away at once from all brick surface, sills, scaffolds, etc., so as to prevent water from running into the wall in case of melting.

If the above suggestions are followed, there is no reason why brickwork should not be continued through the average winter months. The extra work accomplished during the usually dull winter season is worth more to the contractor than the trouble he has taken or the additional cost of labor.—*Naional Builder.*

* * *

ESTIMATING COSTS RUNNING TOO HIGH

"Reducing Cost of Estimating" formed the subject of a timely address delivered by J. J. Kelley, President of the National Contractors' Association, at the meeting of Architects, Contractors and Building Trades held last Thursday in the Hotel Longacre.

"The general contractor gets on an average of one job in every thirty on which he furnishes an estimate," said Mr. Kelley. "Estimates are costly. They require time and careful study, for if the estimate is too high, the bidder loses the contract. If it is figured too low, he does not want it. Now, who pays for the loss sustained in estimating the twenty-nine contracts he does not get?

"Now the plan that I propose is that every estimate shall be charged for. This is best for both parties. The contractor gets a just remuneration for his estimating services and the owner pays only for his own estimates."

When you stop to consider that the Guide **reaches every week and is read by architects, builders, building owners, contractors and sub-bidders in every branch of building construction, you must perceive its unique importance as a medium for advertising with an appeal to that class. Every copy reaches a live prospect.**

As The Editor Sees It

THE Philadelphia Zoning bill was rather quickly disposed of by Council last week. The central section, between South and Vine streets, from the Delaware to the Schuylkill rivers was entirely excluded from further consideration.

The remainder of the bill was sent back to the Mayor's Zoning Commission until such time as information can be obtained as to what the people in every district want in the nature of zoning. This follows very closely the suggestion offered to Philadelphia several weeks ago by Mr. Bassett, the New York Zoning expert. In speaking here of New York's experience with zoning, Mr. Bassett expressed surprise that Philadelphia should have drafted a zoning ordinance before finding out the wish of the public. In New York, Mr. Bassett said, mass meetings were held and zoning was a wanted institution before it was inaugurated.

Commission members, apparently surprised at the speed with which the matter has been cast out by Council, confessed they were without immediate plans. Major Edwin E. Hollenback, a member of the commission and representative of the city master builders, said he would propose that Council be asked for an adequate appropriation to enable the commission to carry out the instructions given it. If that appropriation is not forthcoming, other members of the commission indicated that they would drop the matter, as they have been working virtually without funds for the past two years and have not been able to hire halls and hold the kind of meetings that were suggested as a means of obtaining a measure with real popular support.

* * *

THE country stands in need of a standard Building Code, and more particularly of an effective method of enforcement of the Code. The recent disaster in Washington only serves to add another link in the chain of evidence that such a code and its enforcement are of vital import.

General Marshall, of the A. G. C., has sent the following outline for a standard Building Code to Secretary of Commerce Hoover for the consideration of the Committee on Revision of Building Codes, appointed by him. General Marshall is well qualified to draft a building code, having been chief of the Construction Divison of the Army during the War, and in that capacity, coming in touch with the building codes in 47 states.

Outline for Standard Building Code

1. SCOPE. The code should be prefaced by a statement as to its applicability.

(*a*) As to time: It should include all future work and may be in certain respects retroactive.

(*b*) As to character: It should include all permanent buildings, fences and billboards, etc., and not only the finished structures but also during the period of erection.

(*c*) As to extent: Definition should be made as to how much (if any) alteration may be made to any present building or structure without bringing it under the scope of the code.

The main portion of the code falls under three heads—

REQUIREMENTS, giving the information necessary to make the general plans for any specific building.

CONSTRUCTION, giving the information necessary to make the working drawings for all buildings.

ADMINISTRATION, giving the methods by which the code is enforced.

Part 1—*Requirements*

REQUIREMENTS AS TO OCCUPANCY. As practically all buildings are erected for a certain definite character of occupancy, such as residence, theatre, storehouse, factory, etc., the code proper should commence with a statement of its general requirements for buildings of every class, leaving the details thereof to be explained in subsequent sections. In order to avoid confusion, the names used to describe occupany should be defined exactly and exhaustively; for instance, the line of demarcation should be carefully drawn between tenement houses, apartment houses and hotels, between loft

CHARLES H. ROBBINS, JR.
1209 Arch Street, Philadelphia
BELL PHONE, SPRUCE 1256 KEYSTONE PHONE, RACE 3519

BLUE PRINTS

building, factories and stories, between churches, lecture halls and theatres. Care should be taken to define the status of buildings whose occupancy does not fall in any well-defined category such as bath-houses, jails, railway stations. Provision must be inserted to cover buildings of more than one character of occupancy, such as retail stores with apartment in the upper stories, etc. The requirements as to occupancy fall under the following heads:

(*a*) Location.

Limitations on occupancy may be imposed in the various zones of the city; thus factories may be excluded from certain neighborhoods, and those causing unpleasant odors or noises may be restricted to a zone of their own.

(*b*) Types of Construction.

Different occupants require different types of construction for exterior walls, floor, roofs, partitions and stairs. The usual method of prescribing types of construction in existing building codes is to group buildings as a whole into four or five classes, such as fireproof, ordinary, and frame. For comparatively few classes of occupancy does a building run true to type, so that the general definition for each type of construction is loaded with exceptions. It is therefore suggested that a simpler and more exact mthod is to define four or five types of construction for exterior walls, partitions, interior columns, floors, roofs and stairs separately and to prescribe for each class of occupancy which type shall be used. It should be noted, however, that very frequently more than one type of wall or floor, for instance, may be prescribed for the same building; thus, an occupancy allowing ordinary frame partitions between the rooms may yet require fireproof or fire-resistive partitions around the stairway and elevator shaft. It should also be noted that the type of construction required by the occupancy may be modified by other considerations such as the height or location of the building, as provided in Section 3, b.

(*c*) Allowable loading of floors.

Most codes specify certain loads for which floors or different occupancies are to be designed, these figures to be used for joists, girders or columns. For buildings where the whole floor may be loaded uniformly, this is necessary. However, in residences a row of bookcases and in offices a safe may load heavily one or two beams but there is no likelihood of the whole floor being so loaded. For such occupancies it is therefore recommended that the girders be calculated for a much lighter load than the joists. Allowance should be made for vibration in cases of floors used for dancing, marching or machinery.

(*d*) Safety provisions.

I. Miscellaneous arrangements of plan: such as limitation of area of space between fire-walls, etc., provision for rest rooms for women in factories and the location of workshops and property rooms in theaters.

II. Means of egress: number and size of doors, and when they should open outward; width and slope of aisles in churches and theatres; stairs, their number, width and steepness; fire-escape, their number and location (details of construction to be given later). This section should provide for exits to roof, and from sidewalk vaults and from yards or lightwells.

III. Fire-fighting appliances: such as sprinkler systems, standpipes with hose reels and chemical extinguishers—when required.

(*e*) Light and air.

I. Dark rooms; the uses to which they may be put should be given, both when the rooms are and are not provided with a specified amount of indirect ventilation. (In this connection, the word room should be defined so as to prevent evasion of the code by construction of unauthorized alcoves, etc.)

II. Size of windows: the size of window and the amount thereof to be capable of opening for ventilation should be given for such occupancies as sleeping rooms, workrooms and places of public assembly, preferably in terms of the size of the room. Where indirect ventilation is permitted instead of windows, its amount and character should be given.

III. Cubic capacity: the number of cubic feet required per person in places of public assembly and in workrooms should be given—the latter will vary with different industries. A minimum size should be specified for sleeping rooms.

IV. Size of light shafts: for buildings on interior lots (or portions of corner lots more than a certain distance from the corner) whose rooms require windows, the amount of lot to remain open to the sky above the second story window sills should be stated. This should increase as the height of the building increases.

(*f*) Sanitary provisions.

I. Water supply: when to be furnished and number of wash-basins required. Hot water to be furnished in certain factories.

II. Water-closets: when to be installed and ratio of number required to number of occupants.

III. Use of cellars: how permitted (line must be drawn between cellar and basement.)

3. Requirements Other Than Those From Occupancy: This subject should occupy the next chapter of the code. It divides itself into the following headings:

(*a*) Restrictions on height.

This is usually determined by the zone in which the building is located or by the width of the street on which it fronts. It should be given in feet rather than in stories and should be calculated from the top of curb (average curb if street is on a grade) to top of the front wall. Height of pent houses and roof structures should be governed by a line sloping back from the top of the front wall at a given angle.

(*b*) Restrictions on types of construction.

These may be determined by the zone in which the building in located, or by the exposure (i.e., the width of the street on which it faces or its distance from other buildings) or by the height of the building.

(*c*) Projections over building line.

I. Cornices, string courses, balconies, bay-windows, porticos, marquees, steps and areaways: the projection of steps and

Lowest bids submitted by: Sinclair & Griggs, Medical Arts Building, Philadelphia, $158,900; Irwin & Leighton, 126 North Twelfth street, Philadelphia, $159,800.

Miscellaneous Construction News

Residence, Binghamton, N. Y. Architects, Russoniello & Price, Scranton Life Building, Scranton, Pa. Owner, John Varvo, on premises. Hollow tile, 2½ stories, 32x48 feet, slate roof, hardwood floors, steam heat, electric light, tile work. Plans in progress.

(Continued from Page 88.)

areaways, if allowed, is usually given as a percentage of the width of the sidewalk. Porticos are usually restricted to a percentage of the frontage of the building. Marquees may usually project to the curb, but must be a given height above the sidewalk. Continuous string-course, balconies or cornices (except the main cornice) are usually allowed to project a foot or two. The projection of main cornices should be governed by the height of the building and the width of the sidewalk. Isolated balconies may project several feet, but should not cover more than a given percentage of the frontage. Provision should be made to collect rain water falling on roofs, cornices, marquees and balconies, and to dispose of it so that it is not discharged upon the sidewalk. It is also suggested that the upper surface of window sills and strings courses be so sloped as to prevent the accumulation of snow or the standing thereon of articles liable to fall upon passers-by.

II. Projections under the sidewalk: If the street is likely to be occupied by a subway, the projection of foundations beyond the building line should be prohibited. The space below the sidewalk may usually be occupied by a vault, but if this is permitted it should be by revocable license. It is not uncommon to reserve a given space between the curb line and the outer side of the vault for pipes and conduits.

III. Party walls: their construction should only be permitted where, by mutual agreement between adjoining owners, they become an easement and their demolition is not allowed except by mutual consent; but the channeling of such a wall for columns should be permitted. A minimum distance between the party line and the ends of beams resting on such a wall should be prescribed. The method of strengthening such walls by underpinning and addition of extra thickness should be given in detail.

IV. Carrying up chimneys: where a new building is built contiguous to and higher than a wall in which there are flues, it is usual to require that those flues be carried up to the level of the new building by the owner of the latter, at his own expense.

Part II—*Construction.*

4. Structural Design. The necessary data are:

(*a*) The loading for which floors must be calculated. These have already been given, but in tall buildings where the live load is comparatively small and shifting, however, it is usual to neglect a portion or all of it in designing the foundations and the columns of the lower stories.

(*b*) Roof loading and wind pressure.

(*c*) Allowable bearing on soils.

(*d*) Allowable stresses on material.

(*e*) Formulae to be used.

5. Details of Construction. This section should prescribe those features which it is not possible to obtain by calculation, but which experience has shown to be necessary. They are best segregated into portions of the building thus:

(*a*) Foundations.

Protection of steel against corrosion, details of caisson construction, types of concrete or composite piles.

(*b*) Walls and partitions.

Minimum thicknesses, combination of different materials, skeleton and cage construction, bonding, hollow walls, recesses and chases, arches, parapets, fire-stops in studding.

(*c*) Floors.

Bearing of beams, beveling of ends of joists, bedding of sleepers, provision against dry rot, framing around chimneys and hearths, provision for disposal of water from fire hose (scuppers).

(*d*) Roofs. Guards on skylights.

(*dd*) Towers, turrets and spires.

(*e*) Stairs. Height of hand rail.

(*f*) Chimneys and fireplaces.

(*g*) Installation of heating apparatus.

(*h*) Plumbing and drainage regulations.

(*i*) Installation of electric wiring and apparatus.

(*j*) Elevators and dumbwaiters and their enclosures.

(*k*) Gasoline storage tanks.

(*l*) Theater curtains.

(*m*) Flagpoles.

(*n*) Roof signs.

(*o*) Fences.

(*p*) Parade stands.

6. Specification of Materials and Workmanship. This section should follow the lines of an architect's specification, but prescribing only those features necessary for safety and security.

(*a*) Masonry.

Quality of brick, stone, terra cotta, cement, sand, etc.; Method of mixture of mortar and concrete. Quality of reinforcing steel and method of placing. Location of points for stoppage of work and expansion joints.

(*b*) Steelwork and cast iron.

Quality of materials, details of connections, protection against corrosion.

(*c*) Carpentry.

Quality of material, method of framing.

7. Methods of Construction. This *section refers to the processes to be fol-*section refers to the processes to be followed during the acutal erection of the building.

(*a*) Shoring and underpinning.

Shoring of sides of excavation and of walls of adjoining buildings. Underpinning walls to deepen foundation.

(*b*) Concrete forms.

Method of making and removing. Length of time to be allowed for setting of concrete.

(*c*) Protection of passers-by.

Sidewalk platforms.

(*d*) Protection of workmen.

Guards at elevators, construction of scaffolds.

(*e*) Demolition of buildings.

(*f*) Temporary safeguards for unsafe buildings.

Part III—*Administration.*

8. Enforcement of the Provisions of the Code. This should be placed in the hands of a Superintendent of Buildings, who should be appointed for a long period, say ten years, subject to removal only for cause, and who should have the necessary assistants of his own selection to enable him to execute the following duties and powers:

(*a*) Interpretation of code.

He should issue regulations interpretative of the code; if necessary, establish tests to be used to determine the qualities of material and conduct tests of new materials. He should have the right to decide if and when materials and forms of construction not covered by the code should be used.

(*b*) Permits to construct.

No construction should be started without a permit, to be issued after the plans and specifications have been examined to determine whether they fully comply with the code. Applications for permits should bear the consent of the owner.

(*c*) Inspection of work.

Provision should be made for frequent inspection during construction, and means provided to rebuild work done in violation of the code and to immediately correct any condition which is dangerous.

(*d*) Certificates of occupancy.

No building should be occupied until a final inspection is made and a certificate issued to show that the building complies with the provisions of the code and is considered thereby suited for the purpose for which it is intended. This certificate should be required to be kept in evidence, and no change of occupancy permitted without the necessary alterations and a new certificate.

(*e*) Building surveys.

Provision should be made for periodic inspection of completed buildings to see that they are safe and suitable for the purpose for which they are being used. Powers should be granted to cause corrections of any faulty condition, immediately if necessary. A fund should be provided for emergency work of this character.

(f) Procedure in case of disaster.

It should be the duty of the police to summon a representative of the Superintendent of Buildings in cases of collaspe of buildings and all rescue or demolition work should be under his direction.

(*g*) Appeals.

Right of appeal should be granted from the decisions of plan examiners or inspecctors to the Superintendent and from his decisions to a Board of architects, engineers and builders.

* * *

ONE WAY TO MAKE THINGS HUM

Why not have national settlement periods? Many business houses carry on their books overdue accounts while they, in turn, owe money to creditors and banks. Why not make the dollars work and restore credit to an absolutely sound basis? Why not follow the lead of Jones & Co.?

Jones & Co. had $5,000 coming to them from J. M. Smith. They wrote to Smith, who was their good friend, that they needed the money and that, if possible, he should borrow the amount from the bank. Smith did. Jones & Co. then paid the $5,000 to Brown & Co. Brown & Co. paid an overdue bill to the O. K. Mercantile Company, and the latter sent its check for $5,000 to J. M. Smith who canceled his time loan at the bank.

Every dollar can be made to work this way if a two weeks' national settlement period were adopted by the business men of the United States. Within ten days Smith's $5,000 paid Jones & Co.; Jones & Co. paid what they owed to Brown & Co.; Brown & Co. squared their account with the O. K. Mercantile Company; Smith paid back the money he borrowed from the bank. And there you are.

This is a practical idea. It could be worked at least twice a year. If taken up seriously by the business world it would make things hum. Anyway, it is a suggestion that merits the attention of credit men. The man who makes it workable will be almost as great as the man who invented interest.

—*Manufactured News.*

JANUARY BUILDING HEAVIEST IN YEARS

The January report of the Philadelphia Bureau of Building Inspection is the most encouraging issued since January, 1896. Not in any January since that time has the bureau recorded so much construction. The only records available are those kept since 1895, when the present system was installed, with the organization of the bureau.

A table showing the number of permits issued each January and estimated cost, from 1912 to 1922, follows:

Year	Permits	Cost
1912	448	$1,250,220
1913	672	1,456,740
1914	595	1,247,985
1915	499	910,805
1916	534	1,859,090
1917	449	2,144,630
1918	216	1,684,510
1919	331	684,505
1920	519	3,553,790
1921	529	1,124,440
1922	634	4,411,320

Another record was broken in January. Dwelling construction had probably a greater part in making last month's estimated cost high than any other class of building. Permits were issued for the erection of 403 dwellings at an estimated cost of $1,635,860, or an average cost of about $4,059. In 1921 the average cost of each dwelling was slightly more than $5,000 and in 1920 about $8,000. This is held to reflect the drop in dwelling construction costs. Permits issued now call mainly for the popular two-story brick dwellings, with hardwood floors, electric lights, hot water heat and gas range.

During 1920 the tendency was to build dwellings of a more expensive type. Building and loan associations have been forced to foreclose on many properties of this kind. Builders who had some of the higher priced houses have made reductions.

Construction leaders say that while prices now are low, they are not likely to remain so. Their explanation is that as soon as the demand for materials becomes greater prices will rise. Even now prices have advanced on several lines of building materials.

DAILY BUILDING NEWS

"Service That is Service"

You receive every morning names and addresses of prospective buyers of your goods—you are advised where to secure an order—when to close a contract.

NO GROPING IN THE DARK

You don't wander from pillar to post seeking some one that ***might*** be interested in your products or ***might*** "have something new." Your prospects are ***real*** when you have every morning

DAILY BUILDING NEWS.

One job—one sale in a year—closed through the DAILY BUILDING NEWS will net you many times its cost. What an economy to know of all the work being planned, figured on and awarded! You save all the time wasted running down rumors.

Subscribers to the DAILY BUILDING NEWS find that the promptness with which their telephone inquiries are answered and the importance of securing this desired information quickly, are worth more than the cost of the DAILY BUILDING NEWS.

May we show you how to use profitably the advance reliable DAILY BUILDING NEWS? Call or phone and request samples or representative.

As The Editor Sees It

EVERY industry today, and none more than Construction, is vitally interested in the railroad situation. No business revival can be successful unless transportation facilities are adequate. Therefore the following statement, made recently by the Secretary of Commerce, before the Interstate Commerce Commission, is particularly pertinent at this time.

"In responding to the invitation to discuss some of the problems present in your general railroad investigation, I shall devote myself to three of the railway topics which especially arise from the present economic situation.

I do not need to review at length that we are recovering from the destruction and inflation of the greatest war in history, that we are suffering from the waste, the extravagance, and over-expansion of the post-war boom, and that the war has brought about great shifts in the movement and price levels of commodities between nations.

I would, however, suggest that it might be profitable for our people to get a somewhat clearer perspective of our own, and the world's troubles and problems. Even a superficial survey must bring us out of an atmosphere of gloomy introspection into an assuring realization that, great as our dislocations may seem to be, we relatively are in an enviable position. Our nation is unshaken, and as a people, we are getting our bearings in a world of perplexing economic adjustments. While there is unemployment and lack of profit taking, we are free of panic. We are comparatively more restless than injured. For instance as heavy as our tax burden is it is still less than one-half as great in proportion to our national productivity as the other states in the war.

The violence of our readjustment, however, is without parallel, and we sometimes tend to color our measures for the future by the depression we are in. The fact is that we must predicate all plans for the future on the ultimate return of the American people to a normal economic activity, with our annual progress in the expansion of our production, of our plant and equipment, of our skill and our efficiency. There can be no question that this return will take place and no responsible body will approach our problems on any other basis. Not one of us would submit to the charge that we were not prepared to bet against any odds upon the future of the United States. Our problem is to expedite this recovery—to speed up employment of our workers and thereby find market for our farmers.

If we look at the national economic situation as a whole, the greatest impulse that can be given to recovery from any source whatever is a reduction of rates on primary commodities combined with the immediate resumption of railway construction and equipment. The first depends upon reduction of operating costs, the second upon restoration of credit for our railways.

One thing is absolute. Our transportation facilities are below the needs of our country, and unless we have a quick resumption of construction, the whole community—agriculture, commercial, and industrial—will be gasping from a strangulation caused by insufficient transportation the moment that our business activities resume. For the past five years, we have had no consequential expansion to our railway transportation machine. With but one interval of 9 months in 1918 and 1919 we had a car shortage throughout the whole of the years 1916-17-18-19 and 20. This shortage rose to as high as 160,000 cars, with a corresponding shortage of motive power. We paid tremendous sums in commercial losses and unemployment in consequence. We laid it onto the war. We should lay it onto our lack of foresight and antagonism to railroads.

Few people seem to realize the amount of expansion in our transportation machine necessary to keep pace with the growth of the country. And an equal few seem to have any notion of the price we pay for not having it. Our country is more dependent upon railway transport than any other. All others have comparatively greater cost lines and internal waterways. The experience of the twenty years before the war has shown that we must build an extension of lines,

BLUE PRINTS

including terminal facilities, additional sidings, etc., every year equal to the construction of a new railway from New York to San Francisco. We must add at least 120,000 cars and 2,500 locomotives annually to our equipment. Since we entered the war in 1917 we constructed at least 10,000 miles of railways less than our increasing population and economic development called for and we are behind in rolling stock by about 4,000 locomotives and 200,000 cars. I wish to emphasize that unless we can have an immediate resumption of construction and equipment our commercial community will pay treble for the cost of the whole of them in their losses of a single season. The very moment that we reach anything like normal business we shall see a repetition of car shortages, followed by an increase in the cost of coal to the consumer from one to three dollars a ton; we shall again see premiums of 20 cents a bushel for the use of cars for moving grain; we shall in fact see a shortage of commodities to the consumer; and we shall see gluts upon the hands of the producers. We shall see factories filled with orders again closed for lack of cars; we shall see large intermittency in employment; and we shall see the usual profiteering in commodities due to a stricture between the producer and consumer.

There would be no difficulty whatever, by basing such losses on the experiences we have already had, to calculate a loss to the American people of a billion dollars for each one of these periodic transportation shortages.

Furthermore, there is nothing that is so irrecoverable a loss to the nation as idle shops and idle men. Today we have both. There is nothing that will so quickly start the springs of business and employment as an immediate resumption of construction and equipment of the railways. When business does resume, we shall need all of our capacity for the production of consumable goods. We shall not only find it strangled for lack of transportation, but we shall find ourselves plunging into the manufacture of this very railway equipment and construction in competition with consumable goods for materials and labor. Herein lies the basic cause of destructive price inflation and booms with all their waste and over-expansion. In times of depression, we should prepare for the future and by doing so we can cure the depression itself.

If we examine the fundamental reasons for failure to resume equipment, we will find them in the loss of confidence in railways as an investment and the competition of tax free securities. We have passed the period of credit strain in this depression. Surplus capital is pouring by hundreds of millions monthly into tax free securities and foreign loans, and yet our railways are unable to finance the most moderate of construction programs. The confidence of the public in railway investments was at so low an ebb before the war that finance by the issue of common and preferred stocks had become impossible and railway expansion was living on bond issues. The confidence of an assurance and continuity in earning power to cover this burden of bonds has even lowered since the war began, because of the uncertainties of both rising and falling prices, of rising and falling wages, of rising and falling rates preventing all regularity of earnings upon which an investor could be convinced, even if no other difficult factors entered into the problem. I see no occasion to go into the labyrinth of past railway finance, its propriety, or lack of propriety, its foolishness or its skill. That generation is gone by. This Comission approaches the financial problems of the railways upon the actual value, not upon their issues of securities, and I take it we are living for the future, not the past. We want transportation, and we want it with the values of private initiative and clean public service.

If we look to the immediate future with its complete necessity of paring the railway earnings down to little more than bond interest, until we give relief to the shipper (and thus the primary foundation to business recovery) I can see little likelihood of convincing the investor as to his margins of safety. There is an atmosphere that our railways will never again earn profits, and that they are not as an industry worthy of investment, and that because private investors will not come to their assistance nobody can do anything.

Far from it being impossible for our railways again to return to a profitable footing, I believe it is possible to demonstrate that on an average they will become very profitable. If we assume that the reduction of prices and wage levels will settle at a plane no lower than 50 per cent. over pre-war, and if we assume that the present rates are to maintain, and if we assume restored traffic, then the earnings of our railways would exceed 15 per cent. on the whole of the Commission's tentative valuation. Surely there is room here for safety to investment, as well as relief to the shipper.

But the circumstances being as they are, confidence being at a low ebb, we do not have the equipment necessary for our business. We are driving headlong for a setback to our whole commerce the very moment that we begin to get on our feet.

In these circumstances it seems to me vital that the railways as our greatest industry should propose a courageous program of broad visioned betterments, and, if necessary, the Government should consider giving the use of its superior credit. It would not cost the taxpayer a cent to give the Government guarantee to equipment trusts upon the primary responsibility of the railways the proceeds devoted entirely to improvement and equipment. This is no proposal to take money from the taxpayer. It is a proposal to save him from paying treble the amount of his guarantee in profiteering and losses. It will render a reduction of rates earlier, for unless something is done the improvements will have to be paid over years out of increased rates. Nor would we lose a cent upon the guarantee, for if American railways can not earn interest upon their borrowings, let us throw up our hands and prepare for a second Russia.

A real program of construction would in its various ramifications give relief to five or six hundred thousand of our unemployed. It would enable even added numbers to increase their standard of living, and thus give increased market to the produce of our farmers. Our farmers who look to foreign markets for their

Just remember this: Give out courtesy, kindness, patience and good-will, and you'll get them all back with compound interest. The men who deserve to rank in Class A do not chew the lint and fuss about the small misfits of life. To take what comes and forget the rest is wisdom. Let Braggo give the janitor the call, and the Hall Boys have it out with the Ashbox Inspector—you can't afford to soil your soul with small scraps. Fight on a big scale, or not at all. The folks who have trouble with ushers are always looking for trouble—and find it. Smile, old boy, smile!

If your sales-talk is keyed to interest men who build it should occupy space every week in the "Guide," the only building news magazine this side of Manhattan Island.

Woodoleum Flooring

You are safe when you buy a Woodoleum Floor.

You get an absolute and unqualified guarantee. You get a concern which is the pioneer in this line of floor coverings.

There is but one Woodoleum—accept no imitation.

Proposals

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., February 6, 1922. Sealed Proposals will be opened in this office at 3 P. M., March 7, 1922, for the construction, including mechanical equipment, of the United States Post Office at Charles Town, W. Va., in accordance with drawings and specifications, which may be obtained from the Custodian of the site at Charles Town, W. Va., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

(Continued from Page 104.)

surplus should stop to consider that our home consumption of meat decreased nearly 7 pounds per capita in 1921, mostly owing to unemployment and that if this decrease could be overcome, it would be worth more than a 35 per cent. increase in exports.

We talk glibly of giving billions of credits to foreign countries, to increase our farm exports. I wish to say with all responsibilty for the statement, that a billion dollars spent upon American railways will give more employment to our people, more advance to our industry, more assistance to our farmers, than twice that sum expended outside the frontiers of the United States—and there will be greater security for the investor.

Finally, I want to refer to the veritable witches cauldron being fed constantly with hates distilled from the misdeeds of railway promoters in the past, from the conflicts between the railways and the farmers, between the railways and their workmen. From all the confusion that arises from it we destroy our railways and destroy ourselves. With this Commission on one hand assuring honesty in finance, justice to the shipper and the railway investor, with the Railway Labor Board asuring justice to workers and, above all, with a great spirit of public service in our generation of railway managers, it is time to call off the witches and take some vision of our national situation if we are to pull ourselves out of this depression.

HEATING HOUSES OF VARIOUS WALL CONSTRUCTION

Wood Houses Are Economical to Heat as Well as to Build—How Concrete Block and Monolithic Walls May Be Made to Retain Heat and Keep Out Cold

THE many generations of popularity of wood houses in this country is not entirely due to their relative cheapness and ease of construction. It has always been believed that they were easier to keep warm. Recent scientific research work by a large construction company in northern Minnesota in co-operation with the American Society of Heating and Ventilating Engineers, shows that wood houses are the most economically heated of any type tested except one with double monolithic concrete walls insulated with oiled wood shavings—a type of construction hardly practicable for small dwelling houses.

The tests were conducted in buildings 8½x8½x8½ ft. (interior measurements) with nearly flat roofs, and having one door and one window. Each had a floor of concrete 6 in. thick laid directly on the ground. The roofs were made of 2x4-in. timbers, double sheathed with wood and overlaid with composition roofing, sealed to shut out wind and rain. The ceilings were of plaster board with the regular coatings of plaster.

The five buildings were heated by electric stoves and the amount of electricity consumed was measured. Enough current was supplied to keep the best constructed house at a temperature of 83 deg. F. The same amount of heat was supplied to all the houses and the temperatures of the various ones therefore showed which kinds of construction were the hardest to heat, or the most inefficient from the heating point of view.

Types of Construction Tested

House No. 1 consisted of a framework of 2x4-in. wood studding, sheathed on both sides by ¼-inch plain gypsum plasterboard and one thickness of building paper; stuccoed with cement plaster on the outside and faced with wood fibre plaster upon the plasterboard on the inside. Pieces of boards 4 in. wide were placed horizontally between the studding

at the height of 3½ ft. above the floor level in order to shorten the free air columns contained therein. This wall contained by far the least material per square foot of wall surface of any of the types. The cost of heating this building was $1.12 per month.

House No. 2 had a double-wall of pressed concrete blocks (hydrostone type M-24) dry mix, so shaped that these blocks have a partial integral bond of concrete formed by interlocking lugs. This type of wall has an uninterrupted vertical air space from floor to ceiling, and contains 1,048 cu. in. of concrete per square foot of wall surface. The cost of heating this building was $1.29 per month.

House No. 3 was a double monolith wall, each part of which is 4 in. thick and with a 4-in free air space between the parts. The object of this arrangement was to show the influence of uninterrupted convection currents within the wall. The mass of concrete used is 1,260 cu. in. for each square foot of wall surface. The cost of heating this building was $1.20 per month.

House No. 4 was a double wall of hollowed-out (trough shape) concrete blocks pressed with hollow sides facing each other and having a minimum space of about ¾in. between opposing rims, arranged to partly retard convection at every course. Convection is completely interrupted at a point half-way of the height of the wall by a layer of tar paper across the joint. These blocks are poured (not pressed) with a wet mix to insure a maximum density of concrete. The upper surface of the block as poured constitutes the exterior wall surface and is therefore highly resistant to rain by reason of the accumulation of laitance on the surface. There is no integral bond of concrete between the front and rear block. This wall contains 672 cu. in. of concrete per square foot of wall surface, or about half as much as No. 3. This house cost $1.39 per month to heat.

House No. 5 had a double monolith concrete wall of the same dimensions and arrangement as No. 3 except that the air space was filled with oiled wood shavings. This filling arrested convection and assured a dead-air insulation. The concrete was a dry mix in order to give the necessary strength with the least density, and was stuccoed on the outside with a cement gun to seal the pores. This wall contains the same amount of concrete per square foot of wall surface as No. 3—1,260 cu. in. This house cost 84 cents per month to heat.

The cost of heating was calculated from the amount of electricity actually used and the amount estimated to maintain a uniform temperature in each house of 70 deg. F. This was converted to an equivalent amount of coal at $10 per ton as burned in a heater of ordinary efficiency.

To apply the results to a six-room house the relative cost of heating would be about as follows: No. 1, $18.00; No. 2, $20.30; No. 3, $19.20; No. 4, $22.15; No. 5, $13.50 per month. Take the life of the house as 30 years and number of months per year heated as five and we have the heat cost as follows: No. 1, $2,700; No. 2, $3.100; No. 3, $2,880; No. 4, $3,350; No. 5, $2,010. In other words, the saving in fuel during a generation in the case of a wood house, with coal at $10 per ton, is from $180 to $650 over the other types except No. 5, which is materially more economical in heat saving.

The figures given throughout are estimates only for the purposes of rough comparison. The tests are being repeated this winter with more accurate heat-measuring instruments. The data given above is from a paper by L. A. Scipio, Pittsburgh, Pa., in the September, 1921, "Journal" of the American Society of Heating and Ventilating Engineers.

The most important fact brought out is the necessity of breaking up the air space between the double walls to prevent convection or circulation of the air in this space. Any fillings, or projections, that retard the circulation are helpful.

—*National Builder.*

Tunis & Genther, Architects, formerly of the Real Estate Trust Building, Philadelphia, will occupy their new office, 1423 Locust St., after March 1st.

The Western Waterproofing Co., has moved their office from Stephen Girard Building, Philadelphia, to Franklin Trust Building. Thos. F. Gibson is manager of the Philadelphia office.

The Magna Sand Company, 139 S. 3rd St., Philadelphia, has issued a very attractive booklet, "What You Can Do with Magna White Silica Sand." Architects, contractors and members of the building trade should have a copy of this booklet which contains valuable suggestions and data.

America stands supreme in the development and use of advertising, and advertising is the seed which by implanting desire produces the fruit of social advancement. Education promotes efficiency and efficiency in turn makes possible higher earning power, higher purchasing power and improved living conditions.

To be poor in a wealthy country, to be sick in a good climate, to be inefficient among a progressive people, is a sign of unwise educational methods. Such people were not taught to battle with the world or meet life's emergencies.—Thoreau.

All live men are advertisers, and the only man who should not advertise is the man who has nothing to offer to the world in the way of human service, and such a man is a dead one, whether he knows it or not. Advertising is a legitimate and ethical proposition. Life is too short for you to hide yourself away, mantled in your modesty, and let the world hunt you out. Even the dead are advertisers, for on visiting a beautiful cemetery the other day, I noticed that on nearly every marble slab was given a list of the virtues, talents and beautiful qualities which the dead man was supposed to have carried in stock. This is what you call non-productive advertising, or advertising from an emotional standpoint.—Elbert Hubbard.

The other day a prominent local architect called up to inquire regarding a concern that has not advertised with us for two years. "I saw their ad. some years ago in the Guide," said the architect, "and am unable to recall just where they are located." We gave him the address and learned subsequently that as a result the firm bagged a big order. How many similar orders, from architects who wouldn't take the trouble to look them up, that same concern has missed in the course of the past two years it would interest us to know.

Don't crowd your space, Mr. Advertiser. Better play up one selling point at a time than to try to get everything into one ad. and kill every possible chance for display. An ad. should stand out. It should be easily read. It should draw the attention of the reader. A carload of detail can't be crowded into a few inches of space and still retain the quality of sticking out as all good advertising should.

Man and the giraffe are the only two living things that can't swim naturally. Throw a day-old kitten into the Mississippi and it will paddle its way to shore. The giraffe can't swim because he's not built that way. Man can't swim, just because he is afraid. The chances are that the reason you are not in the swim—financially or otherwise—is because you are afraid.—Glen Buck.

The man who doesn't advertise because he can't afford to "do it right" will never reach a position of affluence because everything worth while in the world had to have a beginning, and there can be no "get there" for the fellow who fails to make a start.

You can't expect to do your "bit" of this busy world's business unless you enlist in the advertising ranks.

As The Editor Sees It

THERE is a very alarming scarcity of skilled mechanics in the building trades. Few young men are entering apprenticeship in the building game. There are several contributory causes to this unfortunate situation and one of these causes is the much discussed problem of the seasonal character of the construction industry. Among many others who are trying to solve this problem is the David Lupton's Sons Co., of Philadelphia, who recently sent out a questionnaire through the medium of their monthly bulletin, bearing on this important question. The bulletin gives a summary of the reples.

Summary

1. On small jobs such as residences, winter construction is practicable only when the weather favors, or when materials are suitable and labor relations are exceptionally good.

2. Large construction can be carried on through the winter in the latitude of Chicago, Buffalo and Boston, by using special heating appliances and canvas protection.

3. The additional cost of such winter construction is from 3 to 10 or 15 per cent. of the cost of similar construction in summer, the lower figure prevailing where work is well organized.

4. Harmonious labor relations are essential. No formula can be written for this, but employers who have made a study of human nature have found the answer.

5. The winter mark-down should be in the neighborhood of five per cent; i. e., just enough to make the owner feel secure that he will not be out of pocket. Special conditions may call for larger mark-downs.

6. Average opinion is that materials and wages should each take approximately a 10 per cent. mark-down, based respectively on prices and hourly wages. The contractor should take a mark-down equal to about 2½ per cent. of the cost of the whole job.

7. The contractors should endeavor by steady employment to expand their permanent organization. As the plan gets going, the question of yearly wages earned will adjust itself.

8. When the plan has been accepted by the building industries, publicity will be needed to "sell" it to the public.

Their comments on the replies are:

1. The real object of equalizing building construction throughout the year is to reduce building costs. This will come:

(a) Because more uniform employment will reduce wage scales;

(b) Because the builders will be better able to keep and train men;

(c) Because the men will work better for a steady job and an employer whom they personally know than for a chance employer whom they will leave in two or three months;

(d) Because steady employment will attract the younger generation into the building trades, as is not now being done.

2. Recent conferences of building interests in Philadelphia have brought out the fact that in this city there is a serious shortage of skilled building artisans. The outside building trades, such as masonry, bricklaying, carpentering and roofing, fail to attract young men in sufficient numbers, owing to the hardships of the work and the irregularity of employment. Most of the outside building workmen in this locality are middle-aged. The same is probably more or less true elsewhere.

3. The greatest handicap of building is the seasonal employment it offers. To whatever extent this can be overcome, the building trades will again be attractive to young men.

4. Instead of taking a lower rate of pay in the winter months, labor might work an additional half hour per day for five days and perhaps two hours additional on Saturdays, the week's pay remaining the same.

5. It will not be necessary to have a formal agreement between the parties interested, provided it becomes a recognized trade custom to reduce prices, etc., in the winter. Neither will be it necessary to get all the material manufacturers,

DRAWING MATERIALS

CHARLES H. ROBBINS, JR.
1209 Arch Street, Philadelphia
BELL PHONE, SPRUCE 1256 KEYSTONE PHONE, RACE 3519

BLUE PRINTS

all contractors, or all labor into even an informal understanding. If the leading manufacturers of each kind of material used, a few leading contractors, and a sufficient number of artisans in the building trades will make a start, the rest will logically follow.

6. Such a start can be made locally wherever a sufficient number of contractors and artisans get together and secure the support of the material men. The contractors might be those best equipped for handling winter work, and the workmen might be either union or non-union. It would only be necessary to show them the advantage of working on a fair wage scale rather than being idle.

7. There can be no question that publicity will be needed. The various building organizations should be able to do effective work in this direction, and in addition each general contractor should see that the architects and leading owners of his locality are posted.

8. It might be to the advantage of the building trade to make special prices on large non-industrial buildings, which can be started at any time, in order to keep them from being held back for summer construction, when the industrial work is due.

To determine how important a factor the annual meeting is among industrial concerns, we are asking about 6,000 leading concerns, to whom this letter goes, to return a card stating their attitude and practice. We will report the replies next month.

Any comment which our readers may wish to send will be more than welcome, and we hope to make the pages of this bulletin an open forum for discussion of the plan. We expect shortly to get the opinions of the material manufacturers also. The subject is offered as suitable also for discussion by the various contractors' organizations, and we shall be glad to receive expressions of opinion from any such.

THE GUIDE has published a great many articles and opinions dealing with the "seasonal" problems which is of such vast importance to the Building Industry. "Now," says *Building Industry*:

"A problem to solve the problem of seasonal and cyclical unemployment has been put forward by Samuel Gompers, President of the American Federation of Labor, as labor's contribution to the efforts begun at the President's Conference. It is based largely on the suggested use of public credit for public purposes, inasmuch as Mr. Gompers believes it would be difficult even if subsidies were obtainable to set the wheels of private industry going in hard times.

"On the other hand, in countries like Great Britain and the United States, where the public credit is excellent, there is no practicable obstacle whatever to the undertakings during hard times of public enterprises of a productive character on a sufficient scale to stimulate all industry and reduce cyclical unemployment to a mere fraction of what it is today," he says. "The principle was repeatedly recognized by the Presidential Conference."

"The problem of unemployment can be solved," he says. "Seasonal unemployment can be almost eliminated. Cyclical unemployment is a social crime of the highest order, and no society which permits it to continue can expect to survive. The question is no longer open to debate. The problem of unemployment must be solved. There is no alternative.

"Labor lays down its proposals. It supports every constructive move, no matter where or by whom initiated. It brings forward, in addition to those moves, a program of proposals which will clear away the soical waste and wreckage casued by unemployment and put the nation on the road to full and final remedy.

"These proposals are before America. Labor demands that the problem be attacked with full vigor and determination, with fearlessness and an eye single to solution with justice."

Mr. Gompers suggests the use of public credits for land reclamation, water-power conservation, inland water-ways, public highways, forestry, housing and railroads.

The reclamation recommendations include the development and extension of reclamation of arid, swamp and overflow lands in accordance with the plans of the United States Reclamation Service, the Inland Waterways Commission and bills which have been laid before Congress.

Under waterpower development he lists the Muscle Shoals project, in which Henry Ford has become interested, the Long Sault Rapids of the St. Lawrence and other parts of the undeveloped water-power system, which he estimates at 200,000,000 horsepower.

Recommendations for the development of inland waterways includes the proposed St. Lawrence Ship Canal, the merits of which have been disputed; development of the Missisippi, which would call, he says, for the expenditure of hundreds of millions that would ultimately be returned in cash as well as benefits: the development of inland and coastwise canal systems; and the expenditure of $43,000,000 for rivers and harbors in 1923.

Mr. Gompers says that the principle of the Public Roads bill, enacted by Congress, appropriating $75,000,000 is sound, and recomends that bills before Congress calling for the expenditure of $100,000,000 additional in the coming year be passed.

Roads, trails, telephone lines and fire towers and other improvements in the National Forests should be built, says Mr. Gompers, who also suggests "reclamation by planting and otherwise of more than 80,000,000 acres of man-made desert, once rich forested land. "Forest devastation," he says, "is adding to this desert yearly some 3,000,000 acres—an area as large as the State of Connecticut."

Hundreds of thousands of men could be put to work by the extension of credits for housing he asserts, through the medium of a Federal home loan bank similar to the Federal Farm Loan Bank. Men could be employed on railroads or new construction, repairs and other outlay by the appropriation or $500,000,000, the sum originally urged by President Harding, it is suggested.

"The works proposed and the credits to be extended are along lines long undertaken by the American Government," says Mr. Gompers, "and are calculated to stimulate and promote the entire industry of the nation—beginning with con-

Proposals

SEALED PROPOSALS

Notice is hereby given that sealed bids will be received by James F. Walton, Chairman of the Court House Committee of the Board of Chosen Freeholders of Camden County, and opened and read in public on Saturday, March 4th, 1922, at eleven o'clock A. M., at a public hearing of said Committee, to be held in the Freeholders' room in the Court House, Camden, N. J., for changes in the quarters of the County Clerk and also in offices of the Prosecutor, in accordance with specifications and drawings, which may be seen on application at the office of the architects, Rankin, Kellogg and Crane, 1012 Walnut street, Philadelphia, Pa.

Bids must be enclosed in sealed envelopes, bearing the name and address of the bidder and the words "Bid on Changes in Court House," and addressed to James F. Walton, Chairman, Court House, Camden, N. J.

Each bid must be accompanied by a certified check in a sum ot less than ten per cent. of the bids submitted.

A surety bond will be required in the full amount of the contract for the proper completion of the work, and the bidder shall also include in his bid a bid-certificate from a surety company.

The Board of Chosen Freeholders reserves the right to reject any and all bids.

James F. Walton,
Chairman, Court House Committee.

Dated February 20, 1922.

Notice is hereby given that sealed bids will be received by James F. Walton, Chairman of the Court House Committee of the Board of Chosen Freeholders of Camden County, and opened and read in public on Saturday, March 4th, 1922, at eleven o'clock A. M., at a public hearing of said Committee, to be held in the Freeholders' room in the Court House, Camden, N. J., for removing the present roof covering and providing new roof covering with flashings and including resetting and repointing of terra cotta balustrade and other miscellaneous repairs included thereby of the Camden Court House, at Camden, N. J., in accordance with specifications which may be had by application at the office of the architects, Rankin, Kellogg and Crane, 1012 Walnut street, Philadelphia, Pa.

Bids must be enclosed in sealed envelopes, bearing the name and address of the bidder and the words "Bid on Court House Roof," and addressed to James F. Walton, Chairman, Court House, Camden, N. J.

Each bid must be accompanied by a certified check in a sum not less than ten per cent. of the bids submitted.

A surety bond will be required in the full amount of the contract for the proper completion of the work, and the bidder shall also include in his bid a bid-certificate from a surety company.

The Board of Chosen Freeholders reserves the right to reject any and all bids.

James F. Walton,
Chairman, Court House Committee.

Dated February 20, 1922.

Notice is hereby given that sealed bids will be received by James F. Walton, Chairman of the Court House Committee of the Board of Chosen Freeholders of Camden County, and opened and read in public on Thursday, March 2nd. 1922, at ten o'clock A. M., at a public hearing of said Committee,

to be held in the Freeholders' room in the Court House, Camden, N. J., for the building and construction of a Comfort Station at the Court House, in accordance with the plans and specifications therefore on file in the office of the Clerk of said Board, and on view at the offices of Benjamin Howell Lackey and Joseph Norman Hettel, architects, No. 5 Hudson street, Camden, N. J.

Bids must be enclosed in sealed envelopes, bearing the name and address of the bidder and the words "Bid on Comfort Station," and addressed to James F. Walton, Chairman, Court House, Camden, N. J.

Each bid must be accompanied by a certified check in a sum ot less than ten per cent. of the bids submitted.

A surety bond will be required in the full amount of the contract for the proper completion of the work, and the bidder shall also enclose in his bid a bid-certificate from a surety company.

The Board of Chosen Freeholders reserves the right to reject any and all bids.

James F. Walton,
Chairman, Court House Committee.

Dated February 8, 1922.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., February 15, 1922. Sealed Proposals will be opened in this office at 3 P. M., March 15, 1922, for the construction of extension, etc., to the United States Post Office, Hagerstown, Md. Drawings and specification may be obtained from the Custodian at Hagerstown, Md., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

LAW BUILDING
at
WEST VIRGINIA UNIVERSITY
Morgantown, W. Va.

NOTICE TO CONTRACTORS

Sealed bids will be received by the State Board of Control at its office in Charleston, W. Va., until 4.00 P. M. Friday, March 31st, for doing all work and furnishing all materials necessary to complete the building described below, according to the plans and specifications of Charles W. Bates, Architect, Wheeling, W. Va.

The building is to be 144 feet x 56 feet, two stories and basement, fireproof construction, exterior of face brick, and stone; interior wood finish of oak, main corridors and stairway of marble, interior partitions of hard tile, roofing tile, flooring, maple, tile, marble and linoleum. Basement contains locker rooms, toilets, club rooms, machinery room, storage and packing room. First floor contains three class rooms, practice court, girls' club rooms. Second floor contains reading room, stack room, professors' offies, librarian's office.

Plans, specifications and blank form for bids will be mailed by the State Board of Control when request is accompanied with check for $10.00, five dollars of which will be refunded on return of plans accompanied with bona fide bid. Separate bids will be taken on wiring, plumbing and heating.

Bids to be accompanied by certified check payable to the State Board of Control for an amount equal to one per cent. (1%) of the bids, as guarantee of good faith.

STATE BOARD OF CONTROL
By James S. Lakin, President
Charleston, W. Va.

(Continued from Page 120)

struction and extending to the manufacturers of all the tools of production and of all consumable goods.

"Nor does this policy call for any drain whatever from the public treasury. The credit of the United States is excellent and could in no way be impaired by public loans for manifestly productive purposes, purposes approved by the overwhelming majority of the nation, including investors. The extensions of credit proposed are based either upon absolutely sound security or are intended for works which will pay for themselves many times over in the increased productive capacity of the nation that will result."

"COMMUNITY BUILDING FOR INDUSTRIAL TOWNS"

The industrial center club building is not a new idea either in this country or in Europe, but there are strong present day tendencies in such buildings which are a definite post war development. How marked these tendencies have become may be observed by a study of "Community Buildings for Industrial Towns," a publication just issued* "to meet the needs of a large number of industrial organizations, individuals and communities."

This publication, the result of studies of the whole field made during 1921, is largely a discussion of some carefully chosen examples of such buildings from the standpoint of architecture, administration and scope of activities. There are conclusions to be drawn from it which cannot fail to interest the local architect. Notably, there is a large and steadily increasing demand for industrial center buildings: these buildings, even when financed solely by the industry, must be broadly democratic in their appeal; they must be so planned as to interest people of all ages and of both sexes.

Even the earliest forms of "welfare clubs" provided within industrial establishments are found to have gradually become democratic in their control, and are being remodeled, enlarged, or replaced often by the workers or by an intra-works organization representing the employers and the employed. The latter, no less than the former, have "come to realize more fully the significance of recreational activities which identify the workers with community life. The community house, where the worker in his leisure hours meets the people of the neighborhood who may or may not be asociated with him in the industry, helps to provide an outlet, for the moral instincts of sociability and companionship."

---

*"Community Buildings for Industrial Towns," Community Service, One Madison Avenue, New York, price, 75 cents.

Those responsible for the newest and most distinctive developments in industrial center social buildings have been noticeably alert in incorporating into them just those features which have contributed most to the success of the memorial community buildings of the country. While nothing approximating a standard of community house architecture has developed to date, a study of the World War "memorials of democracy"** the country over will show that there is a well defined minimum of requirements for the building of a given type. These requirements, adapted to the situation under discussion, are admirably set forth in "Community Buildings for Industrial Towns" in the form of full floor plans for three buildings ranging in price from $45,000 to $275,000. (Jallade, Lindsay and Warren, architects, 129 Lexington Avenue, New York.)

It goes without saying that the local situation demands of the architect as well as of the industrial heads or of the local building committee, a knowledge of the most modern developments in social buildings. It may be added, that it demands as well at least some degree of social mindedness on the part of the architect if those buildings in the aggregate are going to develop into something really fine, into a genuine contribution to the social life of America. If the auditorium, for instance, is successful as a gymnasium, it will inevitably develop an enthusiasm for indoor sports which will demand exclusive gymnastic facilities. Bowling alleys, a swimming pool, a running track. To whom but to the architect would it occur that even the choice of the building site should be such as to permit of additions to the building or future excavation for a basement floor? Or that the back stage theater dimensions must be planned to conform to modern "little theater" requirements, if the local dramatic group is to expand? Or that the kitchen must be so placed as to be easily accessible to large and small rooms for the service of hot food, if hospitality is not to be thwarted?

It is because of its more or less technical discussion of these points as well as of such topics as acoustics, filtering plants, and retaining walls for swimming pools, that the architect as well as the layman interested in the development of community life will find "Community Buildings for Industrial Towns" an invaluable source of information.

MARTHA CANDLER.

**A series of twelve bulletins devoted to discussions of the various phases of the memorial building movement, are available through Community Service without charge.

When you stop to consider that the Guide reaches every week and is read by architects, builders, building owners, contractors and sub-bidders in every branch of building construction, you must perceive its unique importance as a medium for advertising with an appeal to that class. Every copy reaches a live prospect.

There is not a business one can think of, which is not full of little temples where one can curse or pray. Every business that one knows has its host of light in it, fighting against its host of darkness; one set of men conducting the business as if they and the public were engaged in a sort of mutual enthusiasm and daily service, with permanent success as the goal; and another set of men whose success is ruining the business to which they belong, and the public besides—and themselves.

It is surely an injustice to your workmen as well as a source of loss to yourself to supply poor tools in your shop equipment. No man can do anything approaching good work with tools that take the edge off enthusiasm. In shop management, as in most things, details are the whole cloth. Tools are like men. They do good work or they do not, according to the character which they possess. Character in tools is a matter of good materials, expert making and correct design.

The valuable man in any business is the man who can and will co-operate with other men. The foreman who opposes the introduction of a new man into an institution and fights every innovation which he himself does not suggest, is doomed to a gradual and creeping defeat. Men succeed only as they utilize the services and ideas of other men. Co-operate!

Fifty years ago the grocer set out a keg of mackerel and a box of kindling wood, and sat down to wait for customers. Today he carries street-car and newspaper advertising and dresses his windows as smartly as the department store. If it didn't pay he'd still be sitting behind the stove waiting for customers with a mackerel keg out front doing service for a sign.

The only road to advancement is to do your work so well that you are always ahead of the demands of your position. Our employers do not decide whether we shall stay where we are or go on and up; we decide that matter ourselves. Success or failure is not chosen for us: we choose them for ourselves.—H. W. Mabie.

"Camouflage" doesn't pay in advertising. Don't call your cannon a bit of landscape. Be honest and gain the confidence of the public.

Louis S. DeLone, President,
Building News Publishing Co.,
Perry Building, Phila., Pa.

Dear Sir:

The general depression in the Building Trades at the present time, makes the old slogan, "Boost! don't knock" a particularly good sentiment.

Bearing this idea in mind we are sending, unsolicited, our appreciation of your "Daily Building News" and your "Builders' Guide".

We have completed several contracts in the past year which your publications secured. Several of our sub-contractors have obtained work by consulting the reports you send to our office. We can readily realize the opportunities that this medium presents to the material men.

Wishing you the continued success that your publications merit and assuring you that you can count on our future patronage we remain, as a "satisfied customer",

Very truly yours,

PENN BUILDING COMPANY, Reg.,

As The Editor Sees It

IT is always interesting and enlightening to hear the other fellow's point of view. So many people have suffered during the last few years at the hands of landlords and their ascending rentals; so many have been waiting for the lower building costs which do not come, that we are well acquainted with their tale of woe. Now, behold! a champion of the so-called profiteering landlord and house builder. W. C. M. writes to the Editor of the *Bulletin*:

Sir: In spite of what the Socialists or the dissatisfied people may say, the good people who own houses and buildings should be allowed to do what they please with their property—sell it, rent it or give it away if they want to. And they should be allowed to get as much money as they can for their property and also as much rent as they can. The good people who own houses and buildings are not forcing anyone to buy or rent their property, and they are not stopping houses or buildings from being built. This is being done by the land owners and speculators. They own land and don't use it and will not let anyone else use it, but hold it idle, waiting for a big price or a big rent for it, or because they do not want there anyone in the same business, or because the land was in the family so long they hate to part with it, making it hard to get the kind of land wanted to build houses and to produce the good things we need.

Now, the more we tax land values the more we discourage people from holding land idle, and the cheaper the land gets. To build houses and to produce the good things we need and want will give people work, and the more we tax buildings and houses and all the good things we need, the more we discourage the good people from building houses and buildings and from producing the good things we need, and the dearer and scarcer they get. Now, let's tax land values more and all houses and buildings and the thinge we need *less*, so houses and buildings and the good things will be plentiful and cheap, and more people working and the country more prosperous.

* * *

In response to a request by the President in connection with Senator King's suggestion for calling a National Conference on Housing, the following report of the progress of the work of the Department of Commerce with relation to the housing situation was submitted to the President by Secretary Hoover.

I am greatly obliged for your letter of February 2nd, enclosing the very earnest letter from Senator King on the subject of a national conference on housing.

That there is a national shortage of houses requires no repetition. The shortage probably amounts to nearly a million homes—and is, of course, the result of suspension of building during the war. Since that time high costs of building material and labor (due also to increased intermittency of employment) have prohibited the erection of little more than current necessities without recovery of the lost ground. I presume a national conference must proceed with a view either to securing community action or to secure legislation. We have, I believe, largely exhausted the possibility of community action already, as will appear from the following account:

Effort has already been made by the Department of Commerce which has, I believe, at least contributed to the resumption of construction during the past few months to a scale larger than any period since the war began. As the result of your request that this Department should interest itself in the matter (following upon the report of the Senate Committee on Housing), a sum of $50,000 was appropriated by Congress for the Housing Division in this Department.

Our first effort was through co-operation with unofficial bodies in bringing about local conferences on the housing situation in the different cities with a view to ameliorating conditions. These conferences have been held in over 100 cities. They comprised representatives of Chambers of Commerce, labor organizations building and other trade associations, bankers, material manufacturers and contractors. Through these conferences and through other forms of local

BELL PHONE, SPRUCE 1256 KEYSTONE PHONE, RACE 3519

BLUE PRINTS

initiative a very considerable amount of good has been accomplished, although the results have varied a great deal between cities. Positive plans have been worked out in many of them and great stimulation to home building has ensued; where they have gone upon the rocks, it has been over corrupt conditions of the building trades and over wage questions. This Department in addition to giving every stimulus it properly could to community action has served as a clearing house for information between these local efforts.

In addition to local effort, we have created a number of agencies, mostly voluntary, for the purpose of securing constructive solution to some of the more general problems that cause the blockade on housing. Various committees have been established and are engaged in sincere efforts in the following fields, the General Situation in the Construction Industry, Simplification of Municipal Building Rules, Simplification of Plumbing Requirements and Practice, Standardization of Contractors Specifications, Expansion of Small House Design Bureaus, Simplification of Clay Products, Lighting Fixtures, Lumber, Paint and Varnish, and in many other directions. By all these agencies much good has been accomplished in a quiet and efficient manner.

Among other things developed by these conferences was the total absence of any adequate comparative price data respecting building materials in various localities. This matter has been gradually developed in the Department and the spread of these comparative prices to the local conferences has resulted in many reductions.

As an example of problems of national scope, it was strongly emphasized in the investigation of the Senate Committee on Reconstruction that the disordered and expensive requirements of our municipal building rules are estimated to impose a 10% to 20% unnecessary cost upon housing. In this matter, the committee appointed comprised:

Ira H. Woolson, Chairman, Consulting Engineer, National Board of Fire Underwriters, New York City; Edwin H. Brown, Architect, Minneapolis, Minn., Chairman, Committee on Small Houses, American Institute of Architects; William K. Hatt, Professor of Civil Engineering, Purdue University, Director, National Research Council; Rudolph P. Miller, Ex-Superintendent of Buildings, N. Y. C., Chairman, Building Officials' Conference; J. A. Newlin, Forest Products Laboratory, U. S. Department of Agriculture; Ernest J. Russell, Architect, St. Louis, Mo. Chairman, National Board of Awards for Jurisdictional Disputes in the Building Industry, and Joseph R. Worcester, Consulting Engineer, Boston, Mass.

This Committee is drafting a simplified set of municipal building rules embracing the best practice of the art, and this work is well advanced. It has involved a large amount of co-operation with municipalities, with different trades and professions. Arising out of this we have also appointed a committee who are hard at work upon plumbing questions:

George C. Whipple, Chairman, Director, School of Sanitation, Harvard University; William G. Groeniger, President, American Society of Sanitary Engineering; William J. Spencer, Secretary-Treasurer of Building Trades Department, American Federation of Labor; H. Y. Carson, Research Engineer, American Cast Iron Pipe Company, Birmingham, Ala.; A. L. Webster, Sanitary Engineer, 112 East 40th Street, New York City; A. E. Hansen, Sanitary Engineer, 2 Rector Street, New York City; Thomas F. Haney, Chairman, Standardization Committee, National Association of Master Plumbers.

This committee is making good progress, and much experimental work is being done at the Bureau of Standards in the direction of simplification of plumbing requirements.

I appointed a national committee in the matter of city zoning in response to the urgent request of many interested national associations with a view to development of larger vision and more uniform legislation upon this subject.

The committee comprises:

Louis A. Moses, Cleveland, Ohio, Representing the National Association of Real Estate Boards; J. Horace McFarland, Harrisburg, Pa., representing the American Civic Association; Nelson P. Lewis, New York City, representing the National Municipal League and the National City Planning Conference; Lawrence Veiller, New York, representing the National Housing Association; Morris Knowles, Pittsburgh, Pa., of the United States Chamber of Commerce; Edward M. Bassett, New York City, Chairman of Zoning Committee of New York; Frederick Law Olmsted, Brookline, Mass., President of the Society of Landscape Architects, and John Ihlder, Washington, D. C., of the United States Chamber of Commerce.

At the recent Unemployment Conference, a sub-committee was appointed on construction industries, and to all intents acted as a national conference. This committee brought in a very valuable report and recommendations. Members of this committee were representative of all the different national elements in problem and the committee recommended the further development of local conferences and again urged the necessity of higher moral standards, the reduction of costs by materials, capital and labor. This committee has been expanded into more permanent form by the appointment of additional members, and is engaged in promoting local action. This committee comprises:

Ernest T. Trigg, President, National Federation of Construction Industries; Joseph H. DeFrees, President, United States Chamber of Commerce, Washington, D. C.; John Donlin, American Federation of Labor, Washington, D. C.; Alexander M. Linnett, President, U. S. League of Building and Loan Associations, Newark, N. J.; Irving B. Hiett, President, National Real Estate Board, 612 Madison Avenue, Toledo, Ohio; William Stabler, Comptroller, Metropolitan Life Insurance Company, New York City; John H. Kirby, Houston, Texas; Dr. J. T. Duryea, New York City; Chas. Warner, Wilmington, Del.; Richard E. Schmidt, Chicago, Ill.; Gen. R. C. Marshall, Washington, D. C.; C. F. Lang, Cleveland, Ohio; Daniel Crawford, Jr., Philadelphia, Pa.; William L. Monroe, Pittsburgh, Pa.

Generally, I have the feeling that a

Stone or terra cotta, 1 story and basement, 32x58 feet, Johns Manville roof, tile and reinforced concrete floors, tile and marble work. Contract awarded to L. H. Focht & Sons, Baer Building, Reading, Pa.

Residence and Garage, East Spring and Gettysburg avenue, York, Pa. Architect, R. A. Stair, Jr., Guarantee Trust Building, York, Pa. Owner, Charles H. Noos, 348 West King street, York, Pa. Brick, 2½ stories, 40x30 feet, slate roof, hardwood floors, vapor heat, electric light, tile work. Contract awarded to Hess Brothers, 224 South Hawthorne street, York, Pa.

Service Station, Lancaster pike and Lee avenue, Bryn Mawr, Pa., $9,000. Architects, McIlvain & Roberts, Otis Building, Philadelphia. Owner, E. H. Le Boutillier, Edgewood, Pa. Brick, limestone and steel, 1 story, 57x50 feet, slag roof, cement floor, metal lath, rolled steel sash, copper skylights, bond, plate glass, iron work. Contract awarded to John N. Gill & Co., Otis Building, Philadelphia.

Alts. to Store and New Store Building, Glenside, Pa. $10,000. Architect, Seeburger & Rabennold, 1524 Chestnut street, Philadelphia. Owner, Harry Renninger, Glenside, Pa. Brick, and steel, 2 stories, 16x50 feet, slag roof, oak and pine floors, copper bulks, plate glass. Contract awarded to A. Zellfelder, 151 South Broad street, Philadelphia.

Residence, Lansdowne, Pa. Architect, R. R. Neely, 2136 Pine street, Philadelphia. Owner, Wallace Bostick, care of Architect. Brick, frame and stucco, 2½ stories, 25x42 feet, shingle roof, pine floors, hot air heat, electric lighting, tile work. Contract awarded to K. G. Hickey, 1114 South Fifty-second street, Philadelphia.

Residence (6 Twin) Lansdale, Pa. Architect, Jerome S. Landes, Souderton, Pa. Owner, Lansdale Building and Improvement Co., Lansdale, Pa. Hollow tile and stucco, slate roof, pine floors, pipeless heating. Contract awarded to Wm. Lukens, North Wales, Pa.

Junior High School, Monesson, Pa. Westmoreland Co. Architect, J. Merwin Beall & Son, Monesson, Pa. $300,000. Owners, Board of Education, Monessen, Pa. Brick and steel, 2 stories, 200x126 feet, asphalt roof, cement, maple, composition, cork, tile, and linotile floors, metal lath, metal window guards, waterproofing, terra cotta, steel doors, hollow metal skylights, tile, marble and terrazzo work, (heating, lighting and plumbing reserved.) Contract awarded to P. H. Kelly Const. Co., 1713 Sansom street, Philadelphia.

School, Bitnerville, Pa. Architect, C. E. Urban, Woolworth Building, Lancaster, Pa. Owner, Lancaster Township School Board, Kirk Johnson, President, Lancaster, Pa. Brick, 2 stories, 40x93 feet, slag roof, yellow pine floors, hot air heat, electric light, roof ventilators. Contract awarded to Jacob T. Snyder, Slorin, Pa.

Factory, West East street, Lancaster, Pa. Architect, H. Y. Shaub, Imperial Building, Lancaster, Pa. Owner, Dudley Watch Co., care of architect. Brick, steel, 2 stories and basement, 40x120 feet, slag roof, pine floors, electric light, rolled steel sash. Contract awarded to Herman Wohlsen, Woolworth Building, Lancaster.

New Jersey Construction News

Residence, West Collingswood, N. J. Architect, Arthur B. Gill, Law Building, Camden, N. J. Owner, George Shepparo, care of architect. Hollow tile and stucco, 2 stories, 22x33 feet, slate roof, hot water heating, elec-

tric lighting, tile work, hardwood floors. Plans in progress.

Club House, Grand and Beatty streets, Trenton, N. J., $30,000. Architect, R. A. Schuman, 202 West State street, Trenton, N. J. Owners, Polish Gym. Society, Sokol Club, care of architect. Brick, 3 stories and basement, 25x95 feet, concrete foundations, slag roof, hardwood floors, steam heat, electric light, tile work, metal lath, rolled steel skylights, fire doors, safety treads, roof ventilators, waterproofing, ornamental iron work. Plans in progress.

Store and Residence, South Broad street, Trenton, N. J. Architect, R. A. Schuman, 202 West State street, Trenton, N. J. Owner, W. A. Smith, South Broad street, Trenton, N. J. Brick, 2 stories, 15½x80 feet, slag roof, hardwood floors, hot water heat, electric light, tile and marble work, copper work, metal ceilings. Plans in progress.

Court House (alts.), Camden, N. J. Architects, Rankin, Kellogg & Crane, 1012 Walnut street, Philadelphia. Owners, Camden County Board of Freeholder, James F. Walton, chairman, Building Committee, Court House, Camden, N. J. Changes in offices, removing old roof, providing new promenade tile roof, repointing terra cotta balustrade, and miscellaneous repairs. Owners taking bids due March 4th at 11 A. M.

Manufacturing Building, Camden, N. J. Architects, Ballinger & Co., Twelfth and Chestnut streets, Philadelphia. Owners, J. B. Van Sciver Co., Camden, N. J. Reinforced concrete, 7 stories, 220x60 feet and 60x100 feet, slag roof, concrete floors, cork insulation, wood block paving, metal lath, hollow tile, safety treads, waterproofing, dampproofing, structural steel, hollow steel doors, rolled steel sash, marble and terrazzo work. Architects taking bids due March 15th. P. H. Kelly Cont. Co., 1713 Sansom street; Wark Co., 231 South Broad street; Hughes Foulkrod Co., Commonwealth Building; Barclay White Co., 1713 Sansom street; White Const. Co., Widener Building; F. M. Harris & Co., 1620 Parrish street; Turner Const. Co., 1713 Sansom street; J. S. Rogers Co., Drexel Building; Irwin & Leighton, 126 North Twelfth street, and Cramp & Co., Denckla Building, Philadelphia, are figuring.

Church (alts. and add.), Pitman, N. J. Architect, Arthur B. Gill, Law Building, Camden, N. J. Owners, Pitman Baptist Church, care of architect. Concrete block, 1 story, 28x56 feet and 28x28 feet, steam heat, electric light, pine floors. Architect taking approximate bids due March 9th. A. S. Hoffman, Pitman, N. J., figuring.

Residence and Garage, Margate City, N. J. Architect, private plans. Owner, Daniel Sullivan, Thirteenth and Venango streets, Philadelphia. Hollow tile and stucco, 2½ stories, 24x48 feet and 18x28 feet, asbestos shingle roof, oak and pine floors, hot water heat, electric lighting. Owner taking bids due March 4th. Lam Building Co., 1001 Wood street, and H. G. Campion, Otis Building, Philadelphia, are figuring.

Interior Storage Room for Gas Cells, Lakehurst, N. J. Cont .No. 4580. Architect, private plans. Owners, United States Government, Bureau of Yards and Docks, Washington, D. C. Hollow tile, concrete fill on metal lath, 27x500 feet, 13 feet high, concrete floors, steam heat, electric lighting, metal clad doors. Owners taking bids due March 8th. Hughes-Foulkrod Co., Commonwealth Building, Philadelphia, and Irwin & Leighton, 126 North Twelfth street, Philadelphia, are figuring.

Residence, Hanover and Camden streets, Trenton, N. J. Architect, Walter Hankin, 39 East State street, Trenton, N. J. Owner, H. W. Reynolds, 176 West State street, Trenton, N. J. Brick, 3 stories, 19x72 feet, slate and tin roof, hardwood floors, hot water heating, electric lighting, tile work. Architect will take bids.

Stable and Store Room, Newark, N. J. Architects, Department of Institutions and Agencies, Division of Architecture and Construction, Capitol Building, Trenton, N. J. Owners, New Jersey State Military Board, Colonel Balentine, Newark, N. J. Brick and frame, 2 stories, 20x60 feet, slag roof, concrete and pine floors, electric light, roof ventilators. Owner taking bids.

Store and Apartments, Atlantic Avenue, between Windsor and Richmond streets, Atlantic City, N. J. Architect, H. A. Stout, Guarantee Trust Building, Atlantic City, N. J. Owner, Chas. Kline, Atlantic City, N. J. Brick, steel and stone, 3 stories. Architect taking bids due as soon as possible. Lam Building Co., 1001 Wood street, Philadelphia, is figuring.

Bank, (alts.), Camden, N. J. Architect Henry A. Macomb, Merchantville, N. J. Owner, Camden National Bank, Camden, N. J. Brick, granite and terra cotta, 1 story, 70x16 feet, slag roof, maple floors, roof ventilators, steam heat, electric lighting, marble work, iron work. Owners taking bids. Barclay White Co., 1713 Sansom street, Philadelphia, are figuring.

Store and Apartments, 2324 Atlantic Ave., Atlantic City, N. J. Architect, Wm. S. Hewitt, Guarantee Trust Building, Atlantic City. N. J. Owner, Julius Byron, on premises. Brick, 3 stories, 21x85 feet, slag roof, pine floors, hot water heating, electric lighting, tile work. Architect taking bids due as soon as possible. Lam Building Co., 1001 Wood street, Philadelphia, figuring.

New Jersey Contracts Awarded

Meat Packing Plant, Pleasantville, N. J., $100,000. Architect, E. B. Comstock, 110 West Fortieth street, New York City. Owners, Taylor Packing Co., care of N. Taylor, Vermont and Melrose avenues, Atlantic City, N. J. Reinforced concrete, 2½ stories, 60x145 feet, slag roof, brick floors, cork insulation, electric lighting. Contract awarded to Turner Const. Co., 1713 Sansom street, Philadelphia.

Miscellaneous Construction News

Convent, Wilmington, Del. Architect, Paul A. Monaghan, 1218 Chestnut street, Philadelphia. Owners, Ursuline Nuns, Wilmington, Del. Brick, stone and stucco, 3 stories, 130x62 feet, slate roof, hardwood floors, vapor heating, electric lighting, tile and marble work. Plans about completed. Architect will be ready for bids in one week.

Motor Truck Plant, Fort Wayne, Ind. Engineers, Day & Zimmerman, 611 Chestnut street, Philadelphia. Owners, International Harvester Co., Fort Wayne, Ind. Plaster, tile and steel, saw-tooth building, 1 story, multi-story building, power plant, offices. Plans in progress. Details undecided. Will take bids in one month.

LAW BUILDING
at
WEST VIRGINIA UNIVERSITY
Morgantown, W. Va.

NOTICE TO CONTRACTORS

Sealed bids will be received by the State Board of Control at its office in Charleston, W. Va., until 4.00 P. M. Friday, March 31st, for doing all work and furnishing all materials necessary to complete the building described below, according to the plans and specifications of Charles W. Bates, Architect, Wheeling, W. Va.

The building is to be 144 feet x 56 feet, two stories and basement, fireproof construction, exterior of face brick, and stone; interior wood finish of oak, main corridors and stairway of marble, interior partitions of hard tile, roofing tile, flooring, maple, tile, marble and linoleum. Basement contains locker rooms, toilets, club rooms, machinery room, storage and packing room. First floor contains three class rooms, practice court, girls' club rooms. Second floor contains reading room, stack room, professors' offies, librarian's office.

Plans, specifications and blank form for bids will be mailed by the State Board of Control when request is accompanied with check for $10.00, five dollars of which will be refunded on return of plans accompanied with bona fide bid. Separate bids will be taken on wiring, plumbing and heating.

Bids to be accompanied by certified check payable to the State Board of Control for an amount equal to one per cent. (1%) of the bids, as guarantee of good faith.

STATE BOARD OF CONTROL
By James S. Lakin, President
Charleston, W. Va.

(Continued from page 136)

national conference on the housing problem would be likely to split upon prices of materials and wages and, in any event, have no power to affect either one. Such questions can be better settled by local conferences such as those already held. I have held generally that we are or should be a country of local community action, and that the province of the federal government was to stimulate and assist local action and to avoid every suggestion of nationalizing these questions. The blockade was due to high levels of materials, wages, railway rates, and shortage of home building capital. Prices and wages are slowly receding, efficiency of labor is increasing, and the volume of building is gaining.

There is one problem that has distinctly national character that would certainly fall within Senator King's vision and upon which national thought could be advanced by conference; that is, the mobilization of finance of home building. We have mobilized the commercial capital of the country through the Federal Reserve Banks. We have mobilized the far mortgage capital through the Farm Loan Bureau. We are considering mobilizing production capital for the farmers through another organization. The country badly needs a mobilization of the home building capital based upon our building and loan associations, insurance companies, and savings banks. We have a sound foundation upon which to build some sort of structure that would cheapen home building capital, give it more mobility to all regions and afford greater security. A conference to consider this problem would be of great value.

* * *

WE recently heard some one talking of the present "Vogue for Pessimism." And we must admit that Pessimism has certainly been having full swing. Now, blindly to ignore existing conditions can never cure those conditions, but to be pessimistic about them only makes matters worse. If the young seeds planted in the spring gave up at every clump of mud which impeded their progress, we should have no crops. Much good seed has been sown during the past year toward the solution of the very serious problems confronting not only the constructors, but all industries. There have been conferences, there have been investigating committees, there have been sugestions innumerable. These are the seeds which have been planted. The crop which is springing up from them will need much care and weeding, but with preseverance and courage, we can gather a fine harvest. With pessimism, never!

HOW TO ESTIMATE BRICKWORK

Practical Pointers on Figuring Quantities and Labor

By WILLIAM CARVER, *Architect.*

NO thoughtful person can fail to be impressed by the tendency among the building public to turn more and more from the perishable type of construction now generally used and to demand more enduring buildings, which save much in upkeep and in fire insurance premiums, are cooler in summer and assure the thriftiest use of fuel in winter, preserve their market value indefinitely and are a better investment. This movement is also in line with the urgent necessity for stringent conservation of our forest products, as made evident by the Senatorial investigation last year and by the present extensive agitation for reforestation.

Chief among the better material to which the public is turning is brick. This is only natural, for brick construction is the standard by which all other types of masonry may be measured. That such-and-such a material is "as good as brick" is a claim often read in advertisements. Its venerable history, its test by actual use under every conceivable condition and during periods up to thousands of years, its characteristic beauty which warms and mellows with the passing years, are reason enough for the general public, in which, after all, there is a strong appreciation of better things, inclining more and more toward this material. Moreover, brick now has its spokesmen who are drawing the attention of the people to the advantages of brick construction in the advertising pages of innumerable magazines and newspapers.

A contractor who is accustomed to turning out buildings on non-permanent construction and who tries to dissuade a customer from building a brick home by giving offhand an almost prohibitive figure for its construction, is making a great mistake. If he succeeds in his attempt to build a less enduring building, it will be borne in upon the purchaser more and more as time goes on that his reasons for wanting a better home were correct and the reputation of the builder will suffer. Satisfied customers, in any line, are the basis of success. The wideawake contratcor is now making himself familiar with methods and details of all types of permanent construction. He is learning that, after all, the estimating and building of masonry structures is no more difficult than is dealing with the construction with which long use has made him most familiar.

In giving a rough estimate of the comparative costs of a house in two or more types of construction, the contractor should remember that the great majority of the work in the house will cost exactly the same, no matter whether the house is of brick, frame or any other construction. The foundation walls, chimneys, floors, partitions, millwork, roof, wiring, plumbing, heating, tinwork and many other items will show the same cost, the only difference being in the exterior enclosing walls, and that only above the first floor line. Data gathered by the American Face Brick Association from various sections of the country over a number of years, indicates that the total cost of a brick house averages only about 7% over the ordinary type of construction, a difference of only $350 on a $5,000 house. It may be noted here, however, that the new brick Ideal wall, developed in recent months, reduces the cost of a brick house to such an extent that it can now compete in price with many forms of construction, but for the present we will figure the old type of brick building.

The carpenter contractor who would equip himself with information so that he can readily figure brick construction should be warned, however, that too many small mason contractors use estimating methods that are out of date and inexact.

Of course, on a small job, an error or inexactitude in taking off quantities may not be a serious matter, but on larger work or where figuring is close, the contractor should have a system so that exact costs and definite profits can be figured and thus eliminate uncertainty as far as it is possible to do so. To illustrate,—some mason contractors figure 7 to 7½ bricks per square foot of four inch wall thickness of solid brick wall. Anyone who will take the trouble of figuring out the square foot area of a standard brick (which is 2¼x3¾x8 inches) plus the usual ½ inch mortar joint, will see that it is impossible to get more than 6.16 brick per square foot of area, especially in view of the fact that there is practically no waste when using brick. Every bat and broken brick can be used in the wall. On a large job, the cumulative effect of this error would be serious and would result in the ordering of about 16% more brick than needed, not to mention the figuring in of items for handling and laying the extra brick and cost of extra mortar. There is a similar unfortunate practice often followed when figuring openings, some contractors deducting only a certain proportion of the area of the wall figured as solid, the theory being that the extra amount of brickwork figured in will pay for the cost of forming the opening. A better way than this is to deduct the full area of each opening, including the space occupied by the window box for a double hung frame, and make a definite allowance for forming the opening. Similarly,

some contractors do not deduct openings of less than a certain area—sometimes ten square feet, but it is easily seen that this practice would result in considerable inaccuracy on a job where a number of such openings occurred. The full thickness of the wall is also frequently figured for the full girth of the building.

The modern way of estimating brickwork is to figure the actual amount of brick, mortar, etc., needed and base the estimate upon a unit cost which will cover the forming of the openings and corners shown on the drawings. Very few buildings are constructed with plain walls without any openings, and the rate of laying brick is always averaged from jobs on which the usual number of openings occur. The best method is, therefore, to first look over the plans and specifications to determine the class of workmanship desired, the bond, joint and kind of mortar in which the brick is to be laid, whether or not the usual number of corners and openings are shown and fix the unit cost accordingly. Special items requiring extra labor can then be added as necessary.

Some contractors take off quantities of brickwork by reducing all the work where footings go to various brickwork to cubic feet and for larger depths, where walls vary in thickness and where the brickwork is in irregular masses, this is probbably the best method.

On smaller buildings, such as residences, where most of the brickwork occurs in walls of two thicknesses only (apart from chimneys and porch piers) it is generally more convenient to determine the area of the walls of each thickness and either to multiply. these area by the number of brick required per square foot or to read off the quantities from tables which are now available.

Another matter upon which practice varies is that of determining the number of face brick—where such are used—and their increased cost over the cost of the common brick backing. Some contractors determine the number of common brick and face brick separately, figuring the cost at different unit prices. Others figure the entire wall as a common brick wall, adding the increased cost of the face brick and the laying of the same as an extra item. The latter is probably the best method and makes for simplicity and accuracy in figuring. Where the face brick are bonded into the backing with headers, these should, of course, be allowed for in addition to the brick in the outer course.

In actually figuring a job a form is used which is ruled to denote the "in" items on one side and "outs" on the other. The square foot areas of the exterior wall 8 inches thick above the first floor line would, for instance, be placed under the "in" heading, while under the "out" heading would appear the areas of the window and door openings. The brickwork displaced by stone trim, by the weight boxes of double hung windows and other such items should be allowed for and material and labor deducted for the same. In the "in" column, however, is included any extra material and labor necessary for particular items. This system, carried out thoroughly on a few jobs, will enable cost to be determined very closely, especially if a record is kept of the actual cost of each item and checked over with the estimate.

In figuring fireplaces and chimneys, the quickest way is first to figure them as solid brickwork, afterward deducting the brickwork displaced by flues, fireplace openings and ash pit. Tables are available for figuring the material in chimneys, also in porch piers, the tables showing the material needed per foot run.

In figuring the labor, it should be remembered that bricklayers are now quite up to their pre-war production. In the data which follows the bricklayer production is figured on a very conservative basis, and from all sections come advice that these production figures can safely be increased.

In figuring an Ideal wall job, no furring or lathing need be included, plaster being applied directly to the brickwork.

Where brickwork is to be cleaned down, an allowance for this item should be made, also for mortar color, foreman where one is employed, and on large jobs the overhead or rental cost of hoisting machinery, engineer's time and fuel for same.

Material and labor for one square foot Ideal all-rolok wall 8 inches thick: 9.035 brick (of which 6.023 appear upon the face); .08 cu. ft. mortar, .061 hrs. laborer's time; .076 hrs. bricklayer's time.

For one square foot solid wall in common bond: 12.705 brick, .135 cu ft. mortar; .093 hrs. laborer's time; .084 hrs. bricklayer's time, if wall is laid in lime or cement-lime mortar. Where the mortar is cement mortar a little extra bricklayer's time should be figured for this mortar is a little less plastic. .092 hrs. bricklayer's time per sq. ft. is a fair allowance for cement mortar.

Where the Ideal wall is used the cost of construction of a brick home or other building is brought down so that it can compete on an equal first cost basis with any other construction.

By laying brick on edge instead of flat, a hollow wall is formed which has the important advantage of having no through mortar joint and which has a very slight current of air circulating in the interior. Moisture, even under severe practical conditions, cannot be conducted the length of a header brick by capillary attraction and the slight circulation of air helps to keep the header dry. It is therefore practical to plaster directly on the brick without the use of furring. The Ideal wall is the only type of masonry wall so far developed in which furring can be safely omitted. Practice has proved this wall, plastered directly on the brick, to be entirely satisfactory wherever used.—*Building Age.*

$58,000,000 IN HOUSING CONSTRUCTION

Fifty-eight million dollars has been loaned by the Metropolitan Life Insurance Company throughout the United States to build homes and apartments.

The Chicago Trust Company, handling the loans for the Metropolitan Company in Illinois, Wisconsin and Northern Indiana, announces that in that territory $3,400,000 of the fund has been spread sufficiently to build 1,040 homes and apartments, while new buildings are now going up at the rate of 30 a month. These houses have been erected in 66 cities.

The unusual part of the plan, according to the banking officials, is the small average of each loan, which is said to indicate that the construction is done for small home builders. The Illinois loans average about $4,000 each, which is approximately half of the value of building and lot in each case. The builders are given three to fifteen years in which to repay the loans.

The banking officials state that the Metropolitan company does about as much clerical work in making one of these small loans, as it would be putting out the entire $60,000,000 in a few big loans, and that the large loan policy is the one usually favored by American companies with vast sums to invest. This is another reason why this large insurance company deserves great credit for placing such large sums into home building loans.

Business is founded on reciprocity and co-operation. Any other plan than this spells bankruptcy. The successful business nowadays has a heart and a soul.

The man who starts out with the idea of getting rich won't succeed; you must have a larger ambition. There is no mystery in business success. If you do each day's task successfully, stay faithfully within the natural operations of commercial law, and keep your head clear, you will come out all right.—John D. Rockefeller.

All advertising pays—even that which is poorly constructed. A bad ad. is better than no ad. at all. It is worth all that it costs in the competitive world of the present day, merely to keep one's name where the possible buyer cannot help seeing it To be out of sight in the commercial world is to be out of mind.

As The Editor Sees It

A NATIONAL agreement heavily penalizing unions which refuse to abide by decisions has been reached by the Associated General Contractors of America, the American Institute of Architects, the Engineering Council, the National Building Trades and Employers' Association, and the building trades department of the American Federation of Labor through the national board of jurisdictional awards, which has just concluded its regular quarterly meeting in Washington.

A resolution adopted provides that local building trade councils of union labor shall suspend unions and refuse to recognize or support those unions which refuse to abide by decisions of the national board.

It also provides that general contractors and subcontractors who employ only union labor shall incorporate in their agreements with labor a provision that will secure compliance with all the decisions of the board, and that they shall refuse employment to members of local unions which do not abide by such decisions, and further that architects and engineers shall insert in all their specifications and contracts a clause that such decisions shall be followed.

"This resolution," says a statement issued by the national board, "is of far-reaching consequence to settle jurisdictional disputes, which in the past have constituted the majority of the causes for strikes and resulting delays and economic losses.

"It is the most effective co-operation between workmen, employers and professional men interested in construction looking toward the settlement of these jurisdictional disputes without resort to strikes.

"This action has been taken as the result of the report of a speical committee of the national board appointed to outline the procedure to be followed in clearing up the situation created by the refusal of the United Brotherhood of Carpenters and Joiners to conform to the decisions of the board in the case of settling the dispute between the carpenters and the sheet metal workers which was decided in favor of the latter."

The fact can be supported from many architects' offices that plans for work grown dusty are here and there being put into the way of execution, says *American Contractor.* Of course this does not make the architect sore. Neither does it make anyone connected with the construction industry warm under the collar. About the only fretting ones are those who see new construction at lower cost coming into competition with construction put up for their ultimate control under higher costs.

A close study of contracts awarded reveals the fact that much actual work is going to be put under way during the first half of this year. Statisticians tell us that the potential demand is so large by reason of the slack years that it will take years to build up to the saturation point. This is undoubtedly true.

Take the one matter of school building and it is found that the whole nation is sadly underbuilt. Construction to meet the needs of the American people for suitable dwelling will reach enormous proportions.

Looking farther ahead we see a great demand for railroad building piling up year by year in this country. Railroad contractors are having stored up for them an immense amount of work.

The Lumber Trade Journal in discussing the building situation comments on the President of the United States and the housing conference as follows:

The President of the United States has declined to call a national housing conference at this time, and gives reasons for his refusal. They are cogent.

The President says he doesn't know of any legislative palliative for the building problem presently confronting, and doubts very much whether we should try to create one. In other words, it might be said that it would be just another resort to paternalism to help out of a difficulty when we better would, can and must depend upon our own native resourcefulness, both individual and collective.

President Harding is sure that some

DRAWING MATERIALS

BELL PHONE, SPRUCE 1256 KEYSTONE PHONE, RACE 3519

BLUE PRINTS

good came from the conference on unemployment and he hopes that there will be results from the argriculture conference, but he doesn't believe that this sort of think should be kept up indefinitely on all sorts of subjects. He feels that building conditions are peculiar to each community, and that it is well for builders, bankers, contractors and building association officials to get together in such places. The lumbermen might have been included; for example, in Philadelphia, where they are endeavoring to co-operate with the others to the ends of increased building activities.

It is all perfectly understandable. It's no use trying to hoodwink others or ourselves. It's going to be a steady but slow growth. People who would invest in building are not going in up to their necks at once nor until there is reasonable assurance of fair and safe returns on the investment. They can't do any big building now under those terms nor without co-operation from the others. And that's what's what.

All the handicaps standing in the way, including high cost of labor, etc., are in process of being gradually remedied, if not removed. Prices and wages are slowly receding, efficiency of labor is increasing, and the volume of building gaining. In spite of bad weather some building is going on now, and when spring arrives we may look for a real revival, but that doesn't necessarily mean that the demand for housing is going to be supplied this year or next, and it is doubtful if rents or the prices of property will ever go back to the old levels. Some cities were known to be rather overbuilt. Shifts of population and war activities caused a change in the levels thereof, with a consequent enhancement of the inequalities and difficulties, which became under war conditions automatically more acutely evident and pressing; so it will not be for a long time, if ever, that the old conditions will return. It might mean that the cost of housing may never go back, either, to the old pre-war standards, with a corresponding effect on other related activities.

The President's ideas on the topic are not exactly new, and doubtless he would disclaim novelty for them. Their value lies in the distinguished authority of their source. Others as well as ourselves have many times before expounded the idea that the public is entirely too prone to appeal to the paternal element in government for help, when they could get results faster and better by "fearing God and taking their own part." We don't for one moment suppose, either, that Theodore Roosevelt thought he originated the idea, although he did put it a little bit better than anybody else in the title to one of his books. The thought should inhere in any sturdy tub that intends to stand squarely on its own proper bottom.

It would be a fine thing if it could be brought home to everybody, and particularly the little group of serious politicians in the state legislature who have talked so much and done so little.

ARE WE BURNING UP PENNSYLVANIA?

In Five Years $96,779,559 Worth of Property Destroyed by Fires Which Were Largely Preventable—
Public Education in Schools
And Elsewhere Only Effective Remedy

During the last five years ending with 1920, fire losses in Pennsylvania caused the destruction of property valued at the astonishing total of $96,779,559, according to figures made public recently by the National Board of Fire Underwriters, which compiled the statistics from its Actuarial Bureau's records. These figures reveal, in a startling way, the price being paid by the State for public ignorance and carelessness in handling fire hazards.

The causes are classified under three headings, of which twelve are designated as "strictly preventable" with a total of $24,103,254 or 24.9% of the whole; nine are designated as "partly preventable," the aggregate being $36,926,072 or 38.2% of the complete loss, and in addition there are those listed in the "unknown" column, which totals $35,750,233 or 36.9%. The "unknown" losses may be considered as largely preventable since, if determined, they would have been distributed among the other causes.

In analyzing the figures, it is found that while "Exposure," which means the effect of communicated fires, was responsible for the heaviest loss, $14,637,282, the principal specific cause of fire was "electricity," with a toll of $7,885,513. This indicates how the safest form of power and light is abused in Pennsylvania as a result of carelessness. Next in importance, as causes of fire, were "matches-smoking," $5,986,154, then "stove, furnaces, boilers and their pipes," $4,614,728, and then "spontaneous combusion," $3,845,139.

The losses during the five years were as follows:

Strictly Preventable Causes

Defective chimneys and flues	$3,633,352
Fireworks, firecrackers, etc.	276,597
Gas, Natural and Artificial	1,706,293
Hot ashes and coals, open fires	1,011,852
Ignition of hot grease, oil, tar, wax, asphalt, etc.	1,056,696
Matches-smoking	5,986,154
Open lights	1,483,465
Petroleum and it products	2,467,150
Rubbish and litter	221,421
Sparks on roofs	1,440,597
Steam and hot water pipes	204,949
Stoves, furnaces, boilers and their pipes	4,614,728
Total	$24,103,254

Partly Preventable Causes

Electricity	$7,885,513
Explosion	707,214
Exposure (including conflagration	14,637,282
Sparks from machinery	3,203,773
Incendiarism	1,048,974
Lightning	2,772,999
Miscellaneous known causes	1,994,288
Sparks from combustion	830,890
Spontaneous combustion	3,845,139
Total	$36,926,072
Unknown Causes (probably largely preventable	$35,750,233
Total	$96,779,559

Pennsylvania stands second among all of the states in the amount of loss by fire, and the figures quoted should be increased by about 25% to cover losses not reported to the National Board of Fire Underwriters.

Proposals

LAW BUILDING
at
WEST VIRGINIA UNIVERSITY
Morgantown, W. Va.

NOTICE TO CONTRACTORS

Sealed bids will be received by the State Board of Control at its office in Charleston, W. Va., until 4.00 P. M. Friday, March 31st, for doing all work and furnishing all materials necessary to complete the building described below, according to the plans and specifications of Charles W. Bates, Architect, Wheeling, W. Va.

The building is to be 144 feet x 56 feet, two stories and basement, fireproof construction, exterior of face brick, and stone; interior wood finish of oak, main corridors and stairway of marble, interior partitions of hard tile, roofing tile, flooring, maple, tile, marble and linoleum. Basement contains locker rooms, toilets, club rooms, machinery room, storage and packing room. First floor contains three class rooms, practice court, girls' club rooms. Second floor contains reading room, stack room, professors' offies, librarian's office.

Plans, specifications and blank form for bids will be mailed by the State Board of Control when request is accompanied with check for $10.00, five dollars of which will be refunded on return of plans accompanied with bona fide bid. Separate bids will be taken on wiring, plumbing and heating.

Bids to be accompanied by certified check payable to the State Board of Control for an amount equal to one per cent. (1%) of the bids, as guarantee of good faith.

STATE BOARD OF CONTROL
By James S. Lakin, President
Charleston, W. Va.

INVITATION FOR PROPOSALS.

GENERAL ADVERTISEMENT ON THE CONSTRUCTION OF BUILDINGS FOR NEW JERSEY SCHOOL FOR THE DEAF

Public notice is hereby given that sealed proposals for furnishing labor and materials to construct a School and Dining Hall combined—several cottages, Boiler House, and Pump House where shown on plot plan, on ground known as the Scudder Farm, near Trenton Junction, N. J., for the New Jersey School for the Deaf, will be received and opened by the Architects at the office of the Commissioner of Education, State House, Trenton, New Jersey, on March 28th, at eleven (11) o'clock A. M.

The work for which proposals are hereby invited covers the complete construction of the School Building and Dining Hall combined, and several cottages, the Boiler House and the Pump House, including water supply, eleteric work, heating and ventilating, and drainage, all ready for movable equipment.

Bids will be received for the work under five separate contracts as follows:

1. For general construction of entire group of buildings consisting of the School and Dining Hall building combined, the cottages, and the Boiler House.
2. For plumbing work for the entire group of buildings as above.
3. For the electrical work for the entire group of buildings as above.
4. For the heating work for the entire group of buildings as above.
5. For sewage disposal plant with Pump House complete.

The right is reserved to accept or reject any or all proposals. All bids must be in sealed envelopes endorsed "Proposal for New Jersey School for the Deaf," and stating the branch of work covered. No bid will be considered unless accompanied by a certified check to the order of the State of New Jersey, in the amount of five per cent. of the bid, or bid bond in like amount, binding the bidder to execute a contract if awarded to him. The terms of proposal with surety required are fixed by the specifications.

Copies of the drawings and specifications will be on file at the office of the architects for the purpose of estimating. A limited number of copies of the plans and specifications will be loaned to the prospective bidders on deposit of a certified check to their order in the sum of $50. These plans may be obtained by application to Arnold H. Moses, Architect, Temple Building, Camden, New Jersey. If plans and specifications are returned or before the submission of estimates the check will be returned, but should the plans and specifications be not returned, the deposit may become forfeited.

Guilbert & Betelle,
Arnold H. Moses,
Associated Architects.

Dated March 4, 1922.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., February 28, 1922. Sealed Proposals will be opened in this office at 3 P. M., March 28, 1922, for the construction, including mechanical equipment, of the United States Post Office at Salem, Va., in accordance with drawings and specifications, which may be obtained from the Custodian of the site at Salem, Va., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

As The Editor Sees It

ELIMINATION of waste is of paramount importance to every industry in the country, and of particular importance to the Building Industry, which has suffered greatly in the past and still is hampered by waste in all its departments. The war has taught us how costly inefficiency, lack of coordination and harmony can be—the cry then was "it must be done no matter what the cost," and we are now realizing to the full extent in taxes just what it all meant.

The elimination of waste was given great prominence at the recent annual convention of the National Association of Builders' Exchanges held in Memphis, Tenn., when Mr. E. W. Reaugh, of Cleveland, Ohio, presented for consideration the following statement and tentative resolution, the resolution being later unanimously adopted by the convention.

"The building industry has passed through several years of preventable turmoil and strife. Needless to say, labor relations have been the cause of most of the difficulties. However, the fact remains that other conditions exist which are detrimental to the industry.

Over organization and over specialization in the building industry has been a source of inefficiency and unnecessary expense. In Cleveland there are 21 trade associations, a Building Trades Employers' Association, a Builders' Exchange, a Chapter of the Associated General Contractors and several other organizations of material dealers and financial interests.

We have the National Association of Builders' Exchanges, the oldest organization in the building industry; the various State Associations of Builders' Exchanges, and the National Building Trades Employers' Association. In addition to these, there are the following National Associations:

The Associated General Contractors of America,
The American Institute of Architects,
The Federation of Engineering Societies,
The National Federation of Construction Industries,
The Congress of Construction Industries,
The American Railway Engineering Society,
The Society of Western Engineering,
The Mason Contractors' Association of U. S. and Canada,
A. F. of L. (Building Division),
And numerous others.

Each of these organizations must justify its existence in the future by performing a definite economic service. The overlapping and waste in organization should be removed. The most serious indictment against the building industry at this time is—waste. We are not only wasteful in the conduct of our business, but we permit waste in organization.

As an Association of Builders' Exchanges, we have no right to existence, unless we perform a definite economic service. If our program of activities is analagous to the activities of other organizations, some means should be created to eliminate the duplication of effort.

There are some trade organizations—local and national—set up to restrict competition. These organizations have a purely selfish reason for existence. Through collusion attempts are made to harness the law of supply and demand. They fix prices and have trade practices that are unethical and in some cases unlawful.

We are under a cloud as an industry. We have an indictment against us of over organization—we are wasteful—we condone and passively support those organizations which have brought dishonor to our industry.

Let us at this meeting go on record to the effect that we will do all in our power as individuals, as local Builders' Exchanges and as a National Association of Builders' Exchanges, to bring about unification of organization.

The creation of a National Conference Board composed of the presidents and secretaries of all National organizations in the building industry could act as a Clearing House to prevent duplication of effort; each organization would

DRAWING MATERIALS

BLUE PRINTS

be allotted that work which it can best perform.

The Conference Board would be a powerful factor in correcting trade abuses.

It would through its combined membership be representative of the entire industry.

Under this plan each National organization could do better work in its respective field, and it would have the support of all members of the Conference Board.

The Department of Commerce, because of its interest in construction problems and in the elimination of waste, should be represented on this Conference Board.

In order to crystallize these thoughts at this meeting, the following resolution is offered for consideration:

BE IT RESOLVED, That the officers and Board of Control of the National Association of Builders' Exchanges be instructed to take the initiative in the formation of a National Conference Board composed of the executive heads of all National organizations in the building industry.

Other important resolutions passed by the convention are:

RESOLVED: That this association views with great solicitude the serious discouragement of investment in private construction through the freedom from taxation of income from investments in bonds issued by the state or by municipalities existing under state authority; that this association believes that this serious evil should be remedied by the passage of a declaratory amendment to the existing income tax provision of the constitution under which authority could be given to congress to tax incomes derived from state and municipal bonds on exactly the same basis as incomes derived from other sources: that a copy of this resolution be forwarded by the sec'y of this convention to the Senate and the House of Representatives of the U. S.

RESOLVED: That the National Association of Builders' Exchanges appreciates the need of a reduction for governmental expenses to the lowest possible figure and therefore extends its commendation to the President of the United States and the Director of the Budget Gen. Chas. G. Dawes, acting under his supervision, to the Hon. Martin B. Madden, chairman of committee on appropriations of the House of Representatives, and to the Hon. Francis E. Warren, chairman committee on appropriations of the Senate for their arduous and up to this time successful efforts to reduce governmental expenditures and expressed the hope that these efforts may be continued to the end that the heavy burdens of taxation now placed upon the industry of the country may be substantially reduced.

RESOLVED: That the National Association of Builders' Exchanges is convinced that the necessity of the country for a reduction of burdens from taxes arising out of the war, forbids the payment of a cash bonus to the able-bodied soldiers who served in the World War; that it is not practicable to issue bonds for this purpose, since this would interfere with pressing refunding needs and would lower the present value of all indebtedness of the United States; that this association favors the most liberal expenditure for the relief of the disabled soldiers of the World War and for the aid of the widows and children of those who gave their lives to the country.

THAT this Association directs that the foregoing resolution shall be sent to the President of the Senate and the Speaker of the House of Representatives; that a copy of it shall be communicated to each Builders' Exchange throughout the country, with the suggestion that the subject be taken up at each Exchange and the views of each Exchange be communicated to the senators and representatives from the state in which the Exchange is situated.

THAT individual members of the Exchange be advised that in the opinion of this Association their views should be communicated by letter to their senators and representatives so that they may understand correctly the sentiment of the business men in the construction industry upon this important subject.

Simplification of building materials as a means of eliminating waste in industry was discussed at a recent conference held between officials of the Department of Commerce and representatives of architectural, engineering and building organizations.

The Fabricated Production Department of the Chamber of Commerce of the United States is co-operating with the Department of Commerce and the industry in the movement.

The work of the meeting may be summed up in the following resolution which was adopted:

"WHEREAS the undersigned committee of Architects, Contractors and Engineers are fully in accord with Secretary Hoover's program for elimination of waste as a major means to the stimulation of American Business, and

"WHEREAS prominent among the many factors which contribute to such wastes in building as evidenced by the high cost of construction are the multiplicity of types and the great variety of dimensions which now abound in many of the component parts, which enter construction, and

"WHEREAS the cost of construction will undoubtedly be thereby lessened, the industry stimulated, and interest of the public conserved by dimensional simplification;

"*Be it resolved* that this Committee formed to discuss the subject of dimensional simplification recommends to the Department of Commerce that the Division of Simplified Practice study certain essentials parts of construction with a view to simplify the types and lessening the number of different dimensions of those parts."

In selecting the items of building materials to be given attention first, the following were designated: millwork, plumbing, heating, interior wall construction, hardware, lighting fixtures, clay products, the latter including brick, tile of all kinds, terra cotta, sewer pipes, etc.

In giving these items attention, the Department will formulate sub-committees to bring together the manufacturers and others having to do with each particular commodity or service.

It is expected later that conferences of those manufacturing each of the commodities and all interested in these lines

Contract awarded to P. Haibach Cont. Co., 26th and Thompson streets.

Proposals

INVITATION FOR PROPOSALS.

GENERAL ADVERTISEMENT ON THE CONSTRUCTION OF BUILDINGS FOR NEW JERSEY SCHOOL FOR THE DEAF

Public notice is hereby given that sealed proposals for furnishing labor and materials to construct a School and Dining Hall combined—several cottages, Boiler House, and Pump House where shown on plot plan, on ground known as the Scudder Farm, near Trenton Junction, N. J., for the New Jersey School for the Deaf, will be received and opened by the Architects at the office of the Commissioner of Education, State House, Trenton, New Jersey, on March 28th, at eleven (11) o'clock A. M.

The work for which proposals are hereby invited covers the complete construction of the School Building and Dining Hall combined, and several cottages, the Boiler House and the Pump House, including water supply, eleteric work, heating and ventilating, and drainage, all ready for movable equipment.

Bids will be received for the work under five separate contracts as follows:

1. For general construction of entire group of buildings consisting of the School and Dining Hall building combined, the cottages, and the Boiler House.
2. For plumbing work for the entire group of buildings as above.
3. For the electrical work for the entire group of buildings as above.
4. For the heating work for the entire group of buildings as above.
5. For sewage disposal plant with Pump House complete.

The right is reserved to accept or reject any or all proposals. All bids must be in sealed envelopes endorsed "Proposal for New Jersey School for the Deaf," and stating the branch of work covered. No bid will be considered unless accompanied by a certified check to the order of the State of New Jersey, in the amount of five per cent. of the bid, or bid bond in like amount, binding the bidder to execute a contract if awarded to him. The terms of proposal with surety required are fixed by the specifications.

Copies of the drawings and specifications will be on file at the office of the architects for the purpose of estimating. A limited number of copies of the plans and specifications will be loaned to the prospective bidders on deposit of a certified check to their order in the sum of $50. These plans may be obtained by application to Arnold H. Moses, Architect, Temple Building, Camden, New Jersey. If plans and specifications are returned or before the submission of estimates the check will be returned, but should the plans and specifications be not returned, the deposit may become forfeited.

Guilbert & Betelle,
Arnold H. Moses,
Associated Architects.

Dated March 4, 1922.

As The Editor Sees It

ELIMINATING THE CONTRACTOR*

BY J. H. SCOBELL

Craig-Curtiss Co., Cleveland, Ohio

THE Fallacy of Attempting Partly to Eliminate the Contractor" is a subject that we have discussed in an informal way at one or two of our local luncheons. It seems that in Cleveland there has been a tendency on the part of the owner to place more of the so-called sub-trade contracts direct and the practice has grown considerably in the past two years. I am sorry that I haven't had a chance to find what has been the practice in other cities and whether that growth is similar to what we find in Cleveland or not.

In Cleveland we have always had, as far back as my memory serves, many cases of the owner placing the plumbing and heating trades direct. During the last two years we have had some instances where all of the sub-trade work except masonry, concrete and carpentry have been placed direct by the owner through the architect. As we all know that doesn't relieve the contractor of any great responsibility except the making of the contract, and, perhaps, the furnishing of the cash to pay the subcontractor.

Cost-With-Fixed-Fee Contracts.

As an evidence of just how far the practice has extended in Cleveland, I may say that we have handled in the last two years approximately twelve contracts of fair size. Of those twelve, eight of them were cost-with-fixed fee contracts. Of the twelve, in only three cases have we handled all of the sub-trade work. In the eight cost-with-fixed-fee contracts, we figured that the cost of the completed job was approximately six million dollars. Our part of that was under four million dollars, so that what happens is that our fixed fee is based on only a portion of the work for which we actually are required to be responsible.

The fact that a contractor, in handling only part of the work, has his fee limited by the amount of work estimated is one feature. Another is that it doesn't help the industry any to have that condition grow. It is a reflection on the general contractors of this city, and I think on the whole industry, to have him relieved from responsibility that he has had in the past and that he virtually must be responsible for, whether they are written in his contract or not.

Why Sub-Trades Deal With Owners

I am just going to say what I think are the causes and the effects. The cause, as I see it, is the preference of some of the mechanical trade contractors to deal direct with the owner or architect instead of through the general contractor. I might say that, to my knowledge, one of the mechanical trade associations in Cleveland has gone on record as requiring their members always, when possible, to make their contracts direct with the owner; and we have had some instances, at least one or two where it came to our attention, that the owner was furnished by a sub-contractor with a lower bid than were the general contractors. That practice can very easily be extended if we do nothing to stop it.

Another cause is that some of the subcontractors look out and furnish their own systems for use by the architect. I suppose another cause is that some contractors have in the past made substitutions in violation of the standard required by the architect. The big cause, however, is the apathy of the general cotractors, or the keen competition which permits of the practice.

Effect on the Contractor

The effect of this is to relieve the contractor of practically no responsibility that he otherwise would have had, except the payment of the money and the saving to the owner of part of the contractor's legitimate fee. The practice tends to discount the value and the importance of the services of the general contractor and likewise the industry.

As to the cure, I don't know. We have let it go by default; it is gathering ground, and I don't see how we are going

(Continued on Page 196)

(Continued from Page 183)

to cure it except by co-ordinated effort of our local and our national associations. It either is a menace or it isn't. I think it is, and my associates think it is, and I think it can only be done by a system of education. We've got to show that we can do the work better. We've got to show owners that what they are attempting to do in the contracting fields isn't done in his own business. A capable executive never fails to delegate authority where he delegates accountability, and that is exactly what is being done when we divide up the authority on a building contract.

"Mountains are moved by faith, because faith is the basis of public opinion, and public opinion moves the world." It is only through that kind of educational work that we can hope to change this condition.—*Constructor.*

PROPOSALS

INVITATION FOR PROPOSALS.

GENERAL ADVERTISEMENT ON THE CONSTRUCTION OF BUILDINGS FOR NEW JERSEY SCHOOL FOR THE DEAF

Public notice is hereby given that sealed proposals for furnishing labor and materials to construct a School and Dining Hall combined—several cottages, Boiler House, and Pump House where shown on plot plan, on ground known as the Scudder Farm, near Trenton Junction, N. J., for the New Jersey School for the Deaf, will be received and opened by the Architects at the office of the Commissioner of Education, State House, Trenton, New Jersey, on March 28th, at eleven (11) o'clock A. M.

The work for which proposals are hereby invited covers the complete construction of the School Building and Dining Hall combined, and several cottages, the Boiler House and the Pump House, including water supply, eleteric work, heating and ventilating, and drainage, all ready for movable equipment.

Bids will be received for the work under five separate contracts as follows:

1. For general construction of entire group of buildings consisting of the School and Dining Hall building combined, the cottages, and the Boiler House.

2. For plumbing work for the entire group of buildings as above.

3. For the electrical work for the entire group of buildings as above.

4. For the heating work for the entire group of buildings as above.

5. For sewage disposal plant with Pump House complete.

The right is reserved to accept or reject any or all proposals. All bids must be in sealed envelopes endorsed "Proposal for New Jersey School for the Deaf," and stating the branch of work covered. No bid will be considered unless accompanied by a certified check to the order of the State of New Jersey, in the amount of five per cent. of the bid, or bid bond in like amount, binding the bidder to execute a contract if awarded to him. The terms of proposal with surety required are fixed by the specifications.

Copies of the drawings and specifications will be on file at the office of the architects for the purpose of estimating. A limited number of copies of the plans and specifications will be loaned to the prospective bidders on deposit of a certified check to their order in the sum of $50. These plans may be obtained by application to Arnold H. Moses, Architect, Temple Building, Camden, New Jersey. If plans and specifications are returned or before the submission of estimates the check will be returned, but should the plans and specifications be not returned, the deposit may become forfeited.

Guilbert & Betelle,
Arnold H. Moses,
Associated Architects.

Dated March 4, 1922.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., March 14, 1922. Sealed Proposals will be opened in this office at 3 P. M., March 29, 1922, for furnishing and delivering laundry machinery, all carrier charges paid, to the respective superintendents of construction, United States Veteran's Hospital, Ft. Logan H. Roots, Ark.; United States Veterans' Hospital, Ft. Walla Walla, Wash., and United States Veterans' Hospital, Oteen, N. C. Specifications may be obtained at this office in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

DEPARTMENT OF PUBLIC WORKS
BUREAU OF WATER

Sealed proposals will be received and opened at Room 216, City Hall, until 12 o'clock noon on Tuesday, March 28th, 1922, for the following:

Contract No. 571—Pipe and Fittings for High Pressure System.
Contract No. 573—Laying 24" Cast Iron Water Pipe.
Contract No. 574—Boiler Setting Material.
Contract No. 575—Ash Handling Apparatus.
Contract No. 576—Water Softening Plants.
Contract No. 577—Forced Draft Fans.
Contract No. 578—Reduction Gears.
Contract No. 579—Laying Sidewalk on Allegheny Avenue.
Contract No. 580—Headquarters Building at 28th and Cambria Streets.

For full information and particulars apply to Room 796, City Hall.

FRANK H. CAVEN,
Director.

PROPOSAL.

Notice of reception of bids for the erection and construction of a Soldiers' Memorial Building to be erected by the City of Atlantic City on the southside of Pacific Avenue, between States and Maryland Avenues, in said city.

Sealed proposals will be received by the Board of Commissioners of the City of Atlantic City at the Commission Chambers, City Hall, in said City, at a Regular Meeting of said Board to be held on the 6th day of April, 1922.

Plans and specifications may be obtained upon application to S. Hudson Vaughn, Architect, Guarantee Trust Building, Atlantic City, New Jersey, upon payment of deposit.

Separate bids will be received on four (4) sections or groups of the work as follows:

General Construction Work.....Group No. 1
Plumbing and Gas Piping.....Group No. 2
Electric Wiring .....Group No. 3
Heating and Ventilating.....Group No. 4

Each bid must be accompanied by a certified check made payable to the order of Albert Beyer, City Treasurer, as follows:

Group No. 1.....$2,500.00
Group No. 2..... 800.00
Group No. 3..... 500.00
Group No. 4..... 800.00

Checks are to be held as security for the execution of the contract and bonds by the successful bidder. Checks of unsuccessful bidders will be returned after the successful bidder has entered into contract with the bond. Should the successful bidder fail to execute the contract and bond as required, the deposit check will be forfeited to the City.

Each bidder will be required, in addition to the certified check, to furnish with his bid, a Surety Company bidder's bond guaranteeing that the successful bidder will enter into the contracts and bonds required by the City.

All bidders must be thoroughly acquainted with the specifications, the general conditions and other information contained in the plans, specifications and general conditions as outlined by the Architect aforesaid, and must fully comply therewith, irrespective of anything that may appear or fail to appear in this advertisement.

No bids will be received excepting on the form of proposal prepared by the Architect aforesaid.

LOUIS A. STEINBRICKER,
Director of Department of Streets and Public Improvements.

Conditions Discussed With Hoover*

BY FREDERICK L. CRANFORD

Frederick L. Cranford, Inc., Brooklyn, N. Y.

AFTER making that trip out through the West, General Marshall arranged for us to meet at lunch in Wahsington in the middle of November and discuss with Mr. Hoover some of the things that we have found on the trip, and I would like to tell you a little of the talk that we had with him.

First, we stated that it was our belief that it was now desirable to make up a program of necessary economic construction improvements, that the government and people of the United States were carrying a very great burden imposed on us by the war and that the only way to meet that burden was to increase the economic facilities of the United States to help us carry it. We suggested that a national program of hydro-electric development, irrigation, reclamation and railroad terminal development and refinement should be immediately undertaken.

Materials the Main Problem

We had to report that all over the United States, with two exceptions, labor efficiency had come back to its prewar output; that we had asked all over the United States and were very pleased to make another report, that with regard to public work particularly we had gone through quite silently and without much publicity a very great change, that the conditions of dishonesty and incompetency which existed 25 years ago on public work all over the United States had vastly changed, that today our public work was conducted competently and the work was well done and honestly done! that we didn't want to talk about the material situation and the conditions which involved the material manufacturer and distributor in difficulties or to prejudge the situation, but we were able to say (and we believed correctly) that 98 per cent. of the builders and contractors of the United States were doubtful, in fact, were quite sure that the material prices which they were paying for building materials of all kinds were too high, that the prices were not arrived at by economic conditions but that they were unduly influenced by their co-operation among themselves; that we didn't like to make predictions, but we were also afraid that the construction, labor and material manufacturers and distributors were going to take advantage of the first wave of constructive activity to enforce a return to the conditions and prices which obtained in 1919 and 1920.

It was my feeling at the end of that talk that the question of material manufacture and distribution was one of the most difficult problems that we have in the whole United States to face and get the best of; that, whether it is correct or not, our statement of the conditions as we found them with regard to materials is the current public opinion of the United States and that public opinion (that the cost of and distribution of building materials are fixed, not by economic forces, but by avarice) is the main difficulty that we have to face in getting construction started.

Self Regulation Best

The administration at Washington has on many occasions made the statement that business men owe it to themselves to correct the difficulties and the irregularities which exist in their own line of work; that the alternative to that is legislation, regulatory legislation. We have had 25 years of experience of regulatory legislation. Every State and the Nation has attempted to regulate, for instance, our public utilities and our railroads by repressive legislation. That legislation I think we can talk of very frankly. It has produced no constructive result.

We have reached a period in which industry has largely stopped for lack of public confidence. In our particular industry, construction, therefore, it would seem to me as if our obligation was to try and iron out the difficulties that we find now delay beginning the construction necessary to the nation's economic development.

It doesn't make any difference whether the facts support the criticism that is being made of the manufacturers of build-

DRAWING MATERIALS

CHARLES H. ROBBINS, JR.
1209 Arch Street, Philadelphia
BELL PHONE, SPRUCE 1256 KEYSTONE PHONE, RACE 35-9

BLUE PRINTS

ing materials. The fact is that public opinion believes those materials to be improperly priced and the cost of construction unwarranted; and therefore it devolves on us, I think, to take as large a part in trying to correct that situation as lies within our power.

Material Organizations Suspected

With that idea in view, shortly after returning from the western trip, we tried to study out some of the principles that were involved in those difficulties and we found this: That nearly every one of our manufacturers of construction material have a national organization. That national organization was organized for their selfish interest and not in the interest of construction; it was not established with the idea of attempting to stabilize construction except as it might stabilize their own individual work.

It seemed to us that they had made one vital error in that in their national meetings they had held those meetings behind closed doors, for what is done behind a screen usually raises a doubt, in the mind of the man who has to buy that material, as to influences which affected action.

Responsibility on Constructors

Now, take any construction material. Who do the people turn to for advice as to when construction material is at a right figure? They turn to the men who have a knowledge of the previous history of prices in that material. And who are those men? You gentlemen are those men. The 16,000 or 18,000 builders and contractors in the United States are the agents of the public, which the public uses to carry on its construction work; and necessarily, therefore, they turn to you to ask the question, "Is the price right?" And if I gather your answer to that question correctly on our trip, I would say that your answer has been, "The price is not right;" and it is because you have answered that question in that way that we have just gone through a period in which construction in most of its branches has been stagnant.

I have heard it said by not one but a thousand people, and by people in positions of great authority and responsibility —that we are not facing a period of inactivity and idleness; that that period is not dangerous by reason of the activity of radicals, I. W. W.'s anarchists and extreme Socialistics; but that the situation is dangerous by reason of the public opinion that prices have been improperly maintained, that there has been price fixing and that the spirit of selfishness has permeated and invaded nearly all of our lines of business and has produced throughout our people a desire to somehow beat that situation; that this winter in Washington you will witness a tremendous growth in repressive and regulatory legislation.

How to Restore Normalcy?

The President himself has time and again stated that that is not the result that he wants; that he wants to see business itself straighten out its difficulties; that if we don't bring back competition, if we don't bring back normal methods of procedure in our business, we face a very serious and a dangerous situation. I'd like to read just the last paragraph of the letter of Mr. Hoover to this convention:

"I do not believe that there is any service that could be performed in our whole business fabric today that would be of such value as really definite action on the part of your Association."

Opportunity for the A. G. C.

I hardly know how to go on with the subject, it's a pretty big one. This I do want to impress upon you: That you should get in touch with your friends in the distribution and manufacture of building materials. There can be no doubt that they've got to get your confidence, that they've got to show you that the prices they ask for their materials are warranted by the conditions under which they work; and, if they can show you that fact, you will be in a position to change the public opinion of the United States on construction prices.

I was talking to one gentleman here last night who was speaking of a manufacturer of a building material who has made vast profits in the last few years, who takes the attitude that that particular material has a big market and now is his great opportunity, so why should he hesitate to take advantage of that opportunity?

There is only one reason why he should hesitate. If he has a proper regard for the Government under which we live, if he has a desire to see some of the principles that underlie our Government maintained and strengthened, he wants to reverse his position. If, on the contrary, the principle of American business is to get while you can and the devil take the hindmost, we face a very serious situation.

I believe that we individually and joint can do a very great service by demanding to know that the prices of building materials are right and insisting that not great profits but reasonable profits are essential to our national prosperity at this time.—*Constructor.*

BUILDING CONSTRUCTION AND ESTIMATING

Hick's Builders' Guide

This standard book has just been revised and brought thoroughly up-to-date by the addition of much new material. It authoritatively covers masonry, hollow tile, estimating, roof framing, etc. Recommended by experienced men as the best modern text book for apprentices and journeymen. Full of practical "short cuts." A section of the book is devoted to tables which save considerable time that otherwise would be spent in lengthy figuring.

Contents by Chapters: 1. Layout of Sit. 2. Excavating, Sheet Piling and Pumping. 3 Shoring and Underpinning. 4. Stone Masonry. 5. Water-proofing Foundation Walls. 6. Concrete Construction and Forms for Concrete Footings and Foundation Walls. 7. Brickwork. 8. Hollow Tile, Construction and Costs. 9. How to Do Stucco Work on Metal Lath, Brick and Wood Lath. 10. How to Lay Out and Build Fireplaces. 11. Chimney Design and Construction. 12. House Framing. 13. Roof Framing. 14. Mitering Planceers, Mouldings, etc. 15. Carpentry and Construction Kinks. 16. Metal Ceilings and Walls. 17. Estimating Quantities of Materials. 18. Estimating Labor on Carpentry. 19. Estimating Brickwork. 20. Short Cuts in Estimating Forms, etc. 21. Miscellaneous Tables. 360 Pages, 4½x7 inches, 300 Figs. Flexible Fabrikoid, $3.00.

There is not a business one can think of, which is not full of little temples where one can curse or pray. Every business that one knows has its host of light in it, fighting against its host of darkness; one set of men conducting the business as if they and the public were engaged in a sort of mutual enthusiasm and daily service, with permanent success as the goal; and another set of men whose success is ruining the business to which they belong, and the public besides—and themselves.

Rudderow, Chairman of the Detention Home Committee of the Board of Chosen Freeholders of the County of Camden, and opened and read in public on Friday, April 7, 1922, at 10.30 o'clock A. M., at a public hearing of said Committee, to be held in the Freeholders' room in the Court House, Camden, N. J., for the alteration of property No. 422 North Second Street, Camden, N. J., for the purpose of a Detention Home, in accordance with the plans and specifications therefore as revised, on file in the office of the Clerk of the Board and on view at the offices of Benjamin Howell Lackey and Joseph Norman Hettel, architects, No. 5 Hudson Street, Camden, N. J.

Bids must be enclosed in sealed envelopes bearing the name and address of bidder and the words, "Bid on Detention Home Alterations," and addressed to Maurice B. Rudderow, Chairman, Court House, Camden, N. J.

Each bid must be accompanied by a certified check in a sum not less than ten per cent. of the bid submitted.

A surety bond will be required in full amount of the contract for the proper completion of the work, and the bidder shall also enclose in his bid a bid-certificate from a surety company.

The Board of Chosen Freeholders reserves the right to reject any and all bids.

Dated March 23, 1922.

Maurice B. Rudderow,
Chairman, Detention Home Committee.

Statement of the Ownership, Management, Circulation, etc.

Statement of the ownership, management, circulation, etc., of The Builders' Guide, published weekly at Philadelphia, Pa., required by the Act of August 24, 1912, for April 1, 1922.

Editor, H. L. Sharpe.

Managing Editor, none.

Business Manager, Louis S. DeLone.

Publishers, Building News Publishing Co., Perry Building, Philadelphia.

Owners, Louis S. DeLone, 6419 Drexel road, Philadelphia; Samuel R. McDowell, Narberth, Pa.

(Signed)

Building News Publishing Co.,
Louis S. DeLone, Business Manager.

Sworn and subscribed before me this 15th day of March, 1922.

Edward J. Toole, Notary Public.
(My commission expires January 21, 1925.)

DAILY BUILDING NEWS

"Service That is Service"

You receive every morning names and addresses of prospective buyers of your goods—you are advised where to secure an order—when to close a contract.

NO GROPING IN THE DARK

You don't wander from pillar to post seeking some one that ***might*** be interested in your products or ***might*** "have something new." Your prospects are ***real*** when you have every morning

DAILY BUILDING NEWS.

One job—one sale in a year—closed through the DAILY BUILDING NEWS will net you many times its cost. What an economy to know of all the work being planned, figured on and awarded! You save all the time wasted running down rumors.

Subscribers to the DAILY BUILDING NEWS find that the promptness with which their telephone inquiries are answered and the importance of securing information quickly, are worth more than the cost of the DAILY BUILDING NEWS.

May we show you how to use profitably the advance reliable DAILY BUILDING NEWS? Call or phone and request samples or representative.

Proposals

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., April 5, 1922. Sealed Proposals will be opened in this office at 3 P. M., April 27, 1922, for the construction of kitchen to Junior Medical Officers' Quarters, including miscellaneous repairs, etc., to various buildings at the United States Quarantine Station, Baltimore, Md., in accordance with the drawing and specification, copies of which may be had at this office or at the office of the Custodian at the Quarantine Station, Baltimore, Md., in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

Just remember this: Give out courtesy, kindness, patience and good-will, and you'll get them all back with compound interest. The men who deserve to rank in Class A do not chew the lint and fuss about the small misfits of life. To take what comes and forget the rest is wisdom. Let Braggo give the janitor the call, and the Hall Boys have it out with the Ashbox Inspector—you can't afford to soil your soul with small scraps. Fight on a big scale, or not at all. The folks who have trouble with ushers are always looking for trouble—and find it. Smile, old boy, smile!

All advertising pays—even that which is poorly constructed. A bad ad. is better than no ad. at all. It is worth all that it costs in the competitive world of the present day, merely to keep one's name where the possible buyer cannot help seeing it. To be out of sight in the commercial world is to be out of mind.

To be poor in a wealthy country, to be sick in a good climate, to be inefficient among a progressive people, is a sign of unwise educational methods. Such people were not taught to battle with the world or meet life's emergencies.—Thoreau.

If your sales-talk is keyed to interest men who build it should occupy space every week in the "Guide," the only building news magazine this side of Manhattan Island.

Your Best Prospect Is The Man Who Needs Your Material

Any one who sells knows that the best prospect in the world is the man who is in need of, or wants the product or service you sell.

How can you know who that prospect is?

How can you save your salesmen's time and energy by eliminating those prospects who are not immediate prospects?

The answer in the building game is

Daily Building News

On your desk every morning, you can have these live report sheets give you the inside information on all proposed construction work, all jobs on which bids are being taken, all work on which contracts are being let.

This complete, reliable service covers Philadelphia, Eastern Pennsylvania, Southern New Jersey and Delaware.

A post card or phone call will bring you samples that will show you how to increase your business.

As The Editor Sees It

THE construction industries proved in their interesting and comprehensive displays at the National Construction Conference, April 3, 4, 5, 6, at the Drake Hotel, Chicago, that every branch and all associations concerned are concentrating on the problem of reaching the irreducible minimum in the cost of construction and elimination of waste.

The various trade associations showed that they were ready to back up Secretary Hoover's constructive program for the real fundamental activities of collective action by associations properly conducted. Their discussions and displays demonstrated that tremendous progress has been made through these economic and soundly organized groups in elimination of waste and unnecessary cost of construction. For example, the Associated Tile Manufacturers showed the varieties of their products reduced from 735 to 115, that in the case of a cap, for instance, they have reduced from nine varieties to one. They showed the splendid co-operative service they are rendering architects and engineers, industrial plants and other users all for the benefit of the general public. The Paint and Varnish Industry showed the forward steps they have taken along safe and sane lines of co-operative effort. Other similar instances could be cited from all branches.

In fact the whole meeting bore out the slogan adopted by the National Federation of Construction Industries as the key note inscribed on the badge or pin given its membership and all attending the conference, "The Strength of an Industry is its Service to the People."

While the convention was not a large one in number of people present, it was the most representative gathering of every interest involved in the betterment of all construction, besides Secretary Hoover and other representatives of the Department of Commerce. Either the President or Vice President or official representative was present of each national organization, representing bankers, building and loan companies, insurance interests, builders, builders' exchanges, realtors, railroad and public utility construction departments, architects, engineers, Federal, State and municipal construction departments, subcontractors, material producers, manufacturers, wholesale and retail dealers and publishers of the papers serving these fields and joint research organizations maintained by all of these groups, such as the American Engineering Standards Committee.

A better co-ordination of associations is to grow out of the meetings with the unification of programs of each association to secure the most effective results and elimination of all duplication of effort and unnecessary organization expenses, so that as one man put it, "The construction associations will not expend eighty per cent. of their income on organization and only twenty per cent. on actual effective service rendered."

Never before has such a unanimous willingness been evinced on the part of all interests and all associations to work together on such a commendable program. Undoubtedly within a short time we shall see evolved a method whereby the total costs of the necessary associations in the field of construction industries will be reduced but more effective results secured.

All attending felt the spirit of the resolutions proposed by Mr. Reaugh at the recent Memphis convention of the National Association of Builders' Exchanges and much progress was made in carrying on their purpose as a result of the meetings held during the Conference by the various interests involved.

The following members were elected to the Board of Directors: Mr. F. W. Walker, Executive Secretary of the Associated Tile Manufacturers, Beaver Falls, Pa.; D. Knickerbacker Boyd, Architect and Structural Standardist, Philadelphia, Pa.; Mr. E. J. Russell, Architect, St. Louis, Mo., to fill the vacancies on the Board. The other Directors and officers were retained, Mr. E. T. Trigg, President and Mr. W. S. Hays, Secretary. Some of the more important resolutions passed at the Conference were:

Co-operative Trade Associations

WHEREAS, the National Federation of Construction Industries regards the

DRAWING MATERIALS

CHARLES H. ROBBINS, JR.
1209 Arch Street, Philadelphia
BELL PHONE, SPRUCE 1256 KEYSTONE PHONE, RACE 3519

BLUE PRINTS

existence of co-operative trade associations, properly conducted, as of very great benefit to the construction industry and to the public interest; and

WHEREAS, grave uncertainty exists in regard to the extent to which such co-operative associations may operate without violation of law; and

WHEREAS, this Federation regards with approval the efforts of the Secretary of Commerce and of the Attorney General to ascertain the limits within which such Associations can legally carry on their work; and

WHEREAS, it approves all efforts to continue the beneficial operation of such associations:

Therefore Be It Resolved, that this Federation believes that such co-operative associations should be relieved from uncertainties and from the possibility of unintentional violation of law by amendments to the Anti-Trust statutes which will more clearly define their extent, and will state with exactness the co-operative action permitted to such associations, that this Federation believes that such associations should be permitted to define their purposes and to specify their proceedings to the Department of Commerce for review and approval.

Be It Further Resolved, that a copy of these resolutions be transmitted to both Houses of Congress to the end that such amendments may be passed.

Congressional Resolution on Trade Associations

WHEREAS, a joint resolution has been introduced in the Congress of the United States asking for the appointment of a joint committee to consider and advise as to legislation affecting business co-operation; and

WHEREAS, this Federation is aware of the need of such legislation for the fullest development of the commercial fabric of the nation,

Resolved, therefore, that the National Federation of Construction Industries, in convention assembled, heartily endorses the efforts of Senator Edge, of New Jersey, and Representative McArthur, of Oregon, to bring his need to the attention of Congress; and be it further

Resolved, that a copy of this resolution be transmitted to the introducers.

Education in Home Building

WHEREAS, another field of opportunity for the continued activity of this Federation lies in the exercise of its function as a leader of public thought in the construction field; and

WHEREAS, there is a definite need for educational publicity to encourage the ownership of homes by their occupants, to the end, as expressed by Secretary Hoover, that this may become more and more a nation of home owners; and

WHEREAS, the advisability of building and owning homes may be impressed upon the minds of a larger percentage of American citizens just as effectively and beneficially as those same minds have been taught, by means of publicity, to save money, to invest in securities, and to do other wholesome and profitable things; and

WHEREAS, home building has been in many instances discouraged by the spread of false beliefs that home ownership is not as profitable as other forms of investment; and

WHEREAS, the dissemination of the home building idea would go far toward stabilizing the building industries and thereby leveling the high peaks and low spots of construction activities, thus creating a field for permanent welfare work on the part of this body; therefore be it

Resolved, that the President of the Federation appoint a Committee of five whose duty it shall be to investigate the possibilities of financing such a campaign of education and ascertain whether or not the various building interests here represented can be brought together for such co-operative work; and be it further

Resolved, that this Committee be instructed to meet at the earliest convenient time, make its plans and recommendations, and submit a report to the Board of Directors of the Federation at such time and place as the Chairman of that Board may designate.

Instruction in Building Trades

WHEREAS, the National Federation of Construction Industries looks with great alarm upon the insufficient supply of skilled mechanics to do the building construction absolutely required for the development of the country, and

WHEREAS, there seems to be wholly insufficient provision for proper instruction and training of young men in the building trades, therefore be it

Resolved, that this Federation consider and make it one of its purposes to encourage the establishment of proper schools and to use other means for the training and instruction of building craftsmen; and be it further

Resolved, that the Chairman appoint a Committee or Committees to study these problems and submit to the Board of Directors, for its action, a plan of procedure.

Financing of Home Building

WHEREAS, the National Federation of Construction Industries regards the construction of homes for people of moderate means as one of the first essentials to the welfare of the United States, and believes that the individual ownership of homes should be encouraged in every possible way, be it

Resolved, that this Federation believes it to be of the utmost importance that the financing operations for the construction of small homes should be carried on with the least possible expense to the home builder, permitting him to pay the cost of the home in installments consistent with his income.

Resolved Further, that the members of this Federation are urged to call to the attention of the members of the several Legislatures the importance of legislation which shall encourage the formation of Building Associations and the extension of their operations under proper safeguards, and to the need of encouraging investments in such buildings to the largest possible extent.

Taxation of Incomes from State and Municipal Bonds

WHEREAS, the National Federation of Construction Industries views with solicitude the discouragement of investment in private construction through the freedom from taxation of incomes issued by States and subdivisions thereof, be it

Resolved, that this evil should be remedied by the passage of an amendment to the Income Tax provisions of the Constitution giving authority to Congress to tax incomes derived from such bonds on exactly the same basis as other incomes; and be it

Further Resolved, that a copy of this resolution be forwarded to the Senate and the House of Representatives of the United States.

Brick, 3 stories, 18x80 feet, slag roof, hardwood and pine floors, hot water heat, electric light, general renovation. Contract awarded to Cerasoli & Scurci, 1709 South Eleventh street.

When you stop to consider that the Guide reaches every week and is read by architects, builders, building owners, contractors and sub-bidders in every branch of building construction, you must perceive its unique importance as a medium for advertising with an appeal to that class. Every copy reaches a live prospect.

Waterproof Foundations

Foundations of all kinds—concrete, stone, brick—can be made absolutely water-tight. The Truscon method consists of simply using Truscon Waterproofing Paste in the mixing water. In this way, Truscon Paste confers powerful water-repellent properties to concrete, cement stucco and plaster.

Easy to use; costs but little; positive and dependable in its waterproofing results.

Owners taking bids due April 26th.

HOW TO FINISH FLOORS

BY A. ASHMUM

IN most respects the filling and finishing of a hardwood or softwood floor differs little from that employed in the finishing of the woodwork of a building. There are two items of difference, however, to be noted; namely, that as the floor may be subjected to the use of water the finish varnish must be water resistant, and the filler must be the best only, such as we find in silica filler. In the following article I shall endeavor to give the best method of finishing both hard and softwood floors.

Say we have an oak floor. Fill it full and plenty with best silica wood filler. Let it stand 10 or 15 minutes, then rub off with burlap or tow, across the grain of the wood. Let the job stand about 24 hours, then sandpaper it smooth, using a medium sandpaper not too coarse. Dust off and apply a coat of thinned copal varnish. Sandpaper again, then apply one or two coats of best floor varnish. If the finish is to be with wax, apply two coats of good rubbing varnish, rubbing the first coat with curled hair to remove the gloss, and the second coat with flour pumicestone and water. Clean up with water, let it dry, then polish with prepared wax.

Copal varnish gives the best surface for waxing on. Sometimes the raw wood is waxed, applying two or more coats of wax. But such a job will not endure as long as one done on a varnished surface. Wax is not a durable finish, though one which is easily renewed or renovated, and it does not require a skilled worker to do it. Water is fatal to wax finish, but protection is afforded by coating the wax with a very thin mixture of best copal varnish, six parts; boiled linseed oil, six parts, and turpentine, 10 parts. This preparation will not alter the wax effect.

Another good, dull wax finish is made by melting one pound of wax in a quart of crude petroleum oil, to be applied with a bristle brush. It dries, or rather sets, rapidly.

A hard pine floor looks well when first coated with shellac, followed by a coating of wax, which may be rubbed to a polish. Or you may first apply a coat of raw linseed oil, well rubbed in, then in course of about one hour give it a coat of shellac or you can give it two coats of shellac on the bare wood, the last coat rubbed to a polish.

Bathroom floors and floors of entrance rooms and kitchens should not be waxed. Parguetry floors are usually finished with shellac, as this preserves the natural color of the wood and if any other finish is applied over it there wlll be no altering of the natural wood color, for the shellac will keep out any other coating.

Varnish is the best for floors that have hard service; hospitals and similar public buildings require floors which are easily cleaned up and which will not wear away readily, and a good hard copal floor varnish is the thing to use. If such a floor is properly cared for it will wear for years. Milk is a good dressing for a varnished floor; wipe it up with skim milk occasionally.

When a new hardwood floor has been waxed it should be allowed to dry out over night before being rubbed to a polish, but an old floor may be waxed and polished at one operation. A woolen rag is useful for rubbing the wax, but the weighted brush is to be preferred.

Never use water, benzine or naphtha on a waxed floor. To make the wax thinner add turpentine, and to remove old wax from a floor use turpentine.

Waxed Floors

Wax finish made from beeswax and thinners will give a soft finish but one requiring frequent renewals. To make a harder and better wearing finish add some paraffine to the wax mixture.

Another Hardwood Floor Method

Here is another method for doing a hardwood floor: Mix up some raw oil and a little turpentine with some japan driers. Apply one coat of this, well rubbed in. When it is dry give the floor a coat of paste filler; fill the cracks with paste filler made like putty with pulverized silica. This putty may be colored to match the wood. Sandpaper smooth and give it a coat of shellac which, after becoming dry, should be sandpapered and then rubbed with flour pumicestone and oil. This will make a fine finish.

Maple Floors.

Maple floors should be paste-filled with the very palest filler, and finished with shellac. Do not apply oil direct to the wood, for that would darken and spoil the beauty of the maple. Or give it a coat or two of white shellac followed by a coat or two of pale copal varnish—one or two coats of either according to the character of the job. Each coat of varnish should be rubbed down with sandpaper, though the last or finish coat should not be rubbed, as maple is one of the woods which appear best when finished with a gloss coat.

Softwood Floor

A softwood floor may be stained and varnished; or stained, then shellaced, then varnished; or left with the shellac finish, just as preferred.

Here is a cheap finish yet one which will look first-class when done properly. Give a coat of raw oil to the wood and when dry apply a coat of some cheap paste filler; the cheapest is one that you make from pulverized silica and boiled linseed oil with a little drier added. Let this dry, rub as usual, and then give it a coat of shellac and a coat of wax. Rub lightly to a polish.

New Hardwood Floor

Another way: Take a new hardwood floor, paste-fill it as usual, rub off, let dry, sandpaper, and then give it a coat of raw oil with japan driers in it. This must be well rubbed in. After it has become hard-dry give it a coat of thin shellac.

Fillers

A close-grained wood does not need a paste filler, though some finishers use it; a liquid filler is better in most cases at least. Shellac is the best liquid filler, but of course not the cheapest. Copal varnish thinned out with turpentine makes a good liquid filler, or paste filler made thin with turpentine does well. Shellac made thin with alcohol is best for pale woods like maple and white wood, because any filler containing oil will darken maple or any light-colored wood. One of the close grain woods needing paste filler is Georgia pine; this wood has some soft or open part which liquid filler will not fill. The paste filling makes the soft parts as hard as the rest of the surface. When dry rub down and give it two coats of pale shellac varnish. A floor made from this wood should be rubbed once or twice a month with oil, crude petroleum being a good one.

For the Floor in Use

To do a floor which is in use, something which will dry very quickly is necessary. We have it in shellac. This may be colored as desired, preferably with some earth pigment. Make the shellac very thin and apply two coats. This finish will be safe to walk on in a few hours, if done after night it will be plenty hard by morning. This may also be said of a good floor varnish, though shellac is quicker, for it will do to walk on in one hour if needs be. If you use shellac containing wood alcohol, have plenty of ventilation, but better not use it; denatured alcohol is safer.

Oil Finish for Hard Usage

We have known floors of porches at summer resorts, hotels, etc., where there is much hard wear, which were made wtih rift Southern pine and treated with kerosene oil only. One will be slow to believe that such a finish could have any lasting quality, but the oil seemed to preserve the wood and the floor manitained a nice appearance and did not show floor marks.

It was once the custom first to oil a hard wood floor, then to apply wax. The effect of this treatment was seen in a darkened and muddied wood; in due time it was noted and the method relinquished.

Then the idea was to show only the natural color of a wood. Now we show that, and we also use stains getting other effects.

One finisher tells us that he once did a fine floor by simply sand-papering it until it shone as if polished—it was oak. Then he wax-finished it. This process, however, is too costly in the amount of time it requires and hence has failed to become popular.—*National Builder.*

SPRAY PAINTING

BY RAY W. TRIPP

THE use of spray painting equipment operated by means of compressed air, although a comparatively new process of applying paints and other protective coatings, has been extended to a great many new fields during the last year or two. The most noteworthy are the interior decorating of office buildings, institutions, etc., and the interior as well as exterior work on houses and buildings of all descriptions.

Unusual demands placed on the paint industry during the recent war were really responsible for the further development of the first paint guns or air brushes, as they are sometimes called, which were used on large surfaces such as ships, war materials, factory interiors, and similar work. Since then, of course, the equipments, operating technic and especially the paint guns have been improved from time to time until today the outfits are perfected, as well as foolproof. At the present moment the most exacting finishing problems are solved through the use of spraying equipment.

Painting with compressed air and a paint gun requires no introduction to the building manager, master painter or general contractor as the practice is now widely extended. In this age of mechanically operated tools, all who handle paints, either making, buying or applying, are familiar with the operation of the newest and most radical development in the science of painting—pneumatic spraying equipment, and the immense saving of labor through the use of the paint gun is self-evident.

Observation and experience on many thousands of satisfactory installations have disclosed interesting facts worth noting at this time. The air scheme of painting enables one operator to paint more square feet of surface than six or eight painters using hand brushes, and to secure finished surfaces which are superior to those painted with a brush. Where single coat work is desired a lighter or heavier coating can be obtained than is possible with a hand brush. Inaccessible surfaces that are difficult to reach with a brush are rapidly painted, as the paint gun may be quickly mounted on an all metal sectional extension pole whenever the operator wishes to paint a surface beyond his reach. Ceilings and walls up to about twelve feet in height may be painted without staging and ladder work; the use of scaffolding or staging is reduced at least 50 per cent. on any job. Brush marks, skimped places and laps are entirely eliminated and the covering and wearing qualities of materials are increased. All paints are sprayed to equal advantage at the same consistency as for brush work. Material containers are air tight, which prevents the formation of paint skins, and makes it impossible for dirt to become mixed with the paint.

The next point to be considered is the type of equipment required for work such as the building manager has under his control. The standard equipment recommended and used on this work consists of a portable container of 5 or 10 gallon capacity, with control heads for regulation of air and paint pressures, this head containing reducing valves, air and paint strainers, pet cocks and indicating gauges, a paint gun of suitable design, with two guns operated from one head, if desired, an all metal sectional extension pole, and air and material hose in lengths to meet all requirements. A portable compressor outfit, either gas engine or electric motor driven, with air storage tank, necessary gauges and safety valves wil complete the outfit.

Realizing that there are certain little "touching up jobs" to be done almost daily in every large office building, one of the largest manufacturers of spraying devices has just perfected a smaller outfit for this class of work. This small outfit comprises the following: a paint gun attached to a one-pint aluminum container by means of quick opening adjustable clamps, suitable lengths of air hose and a small portable electrically driven compressor. The compressor is operated by such a small motor that it may be connected to an ordinary lighting socket, making painting problems as simple as cleaning ones are through the use of the vacuum cleaner.

Of course, the larger outfit mentioned above is absolutely necessary wherever large quantities of work are to be done at one time. The ideal installation usually calls for both outfits as the building manager of today has more than one building under his control and painting is a continuous performance from the beginning to the ending of the year.

Catechism for Paint Users

Anticipating questions which will arise in the reader's mind, these questions and answers have been arranged:

What is the loss of paint, using spray method?

None, if handled accordin to operating instructions.

What is the covering capacity of the spray on large buildings?

Minimum, 4,000 to 5,000 sq. ft. per 8 hour day; maximum, on large surfaces, 10,000 sq. ft. per 8 hour day.

Can sash and small trim be painted by this method, and is it advocated?

By using a line board such work may be done, but not to advantage. One man with a gun on the main body of the building will keep two men busy with brushes on the sash and trim.

Can the wood work in an office be coated?

Yes, by using a line board and masking glass often found in partitions.

How much air pressure is necessary to operate gun at maximum capacity?

For average work, 50 to 55 lbs. pressure.

Can the spray be regulated?

Yes, it is possible to secure a roun l conical spray or a board fishtail spray, and thickness of paint film may also be easily regulated.

What is the width of the spray?

It corresponds to an 8 or 10 in. brush when the gun is held 6 ins. from surface to be coated.

How is it possible to handle different paints with the same equipment?

By means of different air and material pressure, as well as adjustment of material control on gun.

How are cold water paints, bronze solutions and heavy lead paints kept in suspension?

An air operating agitating attachment is furnished for this purpose.

Will the spray gun clog?

No, if material properly strained and the gun cleaned after each day's work.

Is it possible to do outside painting on a windy day?

Yes, by holding the gun somewhat closer to the work.

Is the use of pneumatic painting equipment advocated by paint manufacturers?

Yes, resolutions favoring the use of spray painting machines were adopted by the Paint Manufacturers' Association of the United States and approved by the board of directors of the National Varnish Manufacturers' Association.

Another question often asked is the following:

How has this method been received by the master painter, the manager and the journeyman painter?

The master painter has been impressed with the fact that the spray method of painting createst a new field for him, and another excellent reason is that it increases his volume of work, which means greater profits. The manager or owner welcomes the spray method, as it enables him to paint at a reasonable price, making his offices and buildings more desirable, whereas if the work has been figured on brush costs, the price would

be prohibitive. The journeyman painter favors the equipment because his occupation has been made much less laborious than with brush work.

There is no doubt that many million dollars' worth of building failed to receive the customary coats of paint during the recent era of high prices of materials and labor. Much of this neglected work now demands immediate attention if the property is to be saved. New building, which we are sorely in need of, will soon be demanding its share of protective coatings. The field for this invaluable aid to modern building is surely extensive.

Pneumatic painting equipment has proved its value beyond a doubt and has earned a permanent place in up-to-date business practice. It is one of the most important agencies through which the wise and comprehending employer makes his employe's job a pleasant and healthful one, at the same time securing more and better work. Surely, every user of paint or finishing material owes it to himself fully to investigate the possibilities of spray method as applied to his particular work.

—*Building Management.*

The largest labor convention ever held in Pennsylvania will be held at Harrisburg in May of this year. The occasion is the Ninth Annual Convention of Governmental Labor Officials of the United States and Canada to be held May 22nd to 26th.

Clifford B. Connelley, Pennsylvania Commissioner of Labor and Industry, has invited labor commissioners of the United States and Canada, seventy-five in number, to be present in the hope that a convention of commissioners may be held in connection with the conference. This feauture of the conference would have many of the advantages toward unification of administrative policy that were found in the assemblage of governors of the various states in Harrisburg two years ago.

The annual meeting of the Department of Labor and Industry will be held at this time and will include such group sessions as were found at the Industrial Relations Conference last October. Safety engineers will get together to form a state-wide organization to co-operate with the Department; while sessions of the Advisory Council on Women and Children, the Boiler and Pressure Vessel Inspectors Association, and the Industrial Editors Association will contribute to the group idea of such a conference.

The tentative program of the Governmental Labor Officials Convention includes a child welfare session, inspection, safety and sanitation session, employment, mediation and counciliation, workmen's compensation, medical supervision, and rehabilitation sessions, and minimum wage and hours session.

In addition to the state officials who are expected to attend the convention there will be a large delegation of labor officials representing the Federal Government on problems of nation-wide importance. Not less than 1,000 people are expected to be present during the conference.

The officers of the Association of Governmental Labor Officials are: The Honorable Frank E. Wood, Commissioner of Labor and Industrial Statistics of the State of Louisiana, President; Dr. C. B. Connelley, Commissioner of Labor and Industry, Pennsylvania, First Vice President; Miss Ethel M. Johnson, Assistant Commissioner of Labor and Industries of the Commonwealth of Massachusetts, Second Vice President; the Honorable H. M. Stanley, Commissioner of Labor of the State of Georgia, Third Vice President; the Honorable Francisco Varoma, Director of Labor Bureau, Philippine Islands, Fourth Vice President; the Honorable J. N. McLeod, Chief Inspector, Calgary, Alberta, Canada, Fifth Vice President, and Miss Linna E. Bressette, former Director of Women's Work, Court of Industrial Relations of Kansas, Secretary-Treasurer.

"REMEDIES" THAT DESTROY

"DISTORTED" railway rates, as Secretary Hoover calls them, have a much more vital significance to the public than merely to effect a temporary change in the prices of commodities. They produce a distortion of the entire economic structure that is far-reaching in its scope and appallingly wasteful in its effects.

Let us for a moment examine the commercial structure. It may be likened roughly to an open-meshed fabric composed of many strands woven hither and yon, each under a certain stress and each elastic to some degree. Where they cross, these strands are not bound tightly; nevertheless they do tend to concentrate their crossings at certain foci where they adhere more or less.

These strands represent the commercial influences and facilities. Some of them are material, as railway, highway, and water-borne traffic. Some are quite intangible, as credit, railway rates, foreign competition, and the buying habits of the people. At the foci, where the strands cross, are the centers of commerce, production, and population.

So long as commercial conditions are normal, this vast and complicated fabric is in equilibrium, each strand giving a little and taking a little under the slight distortions of changing commercial conditions. A drought in Kansas, a minor change in freight rates in New England, or a bank failure in Texas, may disurb the equilibrium more or less, producing stresses in the strands. These, however, are well within the elastic limit and although the fabric changes shape slightly, it remains intact.

But under violent or far-reaching disturbance this no longer is true. Under such stress some strands are strained almost to breaking, others snap, while still others may be wholly relieved of stress and thrown out of action. New foci are created by the shifting and readjustment of the strands amongst themselves; great investments of capital at existing foci and along certain of the strands may be rendered useless and, for all practical purposes, destroyed. The San Francisco fire was such a disturbance. Let those who doubt ask Seattle and Los Angeles. The opening of the Panama Canal was another, although its effects were, so far as possible, discounted. Hill's steamship lines to the Orient were still another.

But all these were trifling alongside the disturbance that was inflicted upon the fabric by the horizontal increases in railroad rates. As Secretary Hoover pointed out, these were imposed broadcast without regard to existing conditions.. The increased rates since 1914 he tells us have added probably less than 1 per cent. to the price of cotton goods while they have added nearly 100 per cent. to the cost of assembling the material for pig iron.

"All this," continues the Secretary, "is artificially forcing our industries to move toward their raw materials. This does not alone represent the starting of a new factory; it is a movement of the whole mechanism of the community, labor, homes, schools, railways and what not—an enormous duplication of plant and loss of capital. We will ultimately have the rates readjusted and then we will destroy the new industries created under them."

What Secretary Hoover points out with respect to railway rates applies with equal force to every sweeping and undiscriminating change in the commercial fabric. His words should be pondered by the panaceahawkers who infest the land, directing their efforts toward attainment of a single object and forgetting that no fundamental can be changed without affecting the entire structure.

—*Engineering News Record.*

Fifty years ago the grocer set out a keg of mackerel and a box of kindling wood, and sat down to wait for customers. Today he carries street-car and newspaper advertising and dresses his windows as smartly as the department store. If it didn't pay he'd still be sitting behind the stove waiting for customers with a mackerel keg out front doing service for a sign.

As The Editor Sees It

Wide-spread demand for a Building Code in Pennsylvania has necessitated a speeding up of the work on the tentative draft of the Building Code prepared by the Industrial Board, according to Commissioner Clifford B. Connelley of the Department of Labor and Industry.

The draft is rapidly nearing completion, Commissioner Connelly states, the third section of the Code having been recently submitted to the general committee for study.

The three section thus far completed are those on assembly buildings, residence buildings, and business buildings.

Included in assemblies are theatres, motion picture houses, churches, baseball parks, observation towers, school buildings, colleges, libraries, museums, art galleries, etc.

Such dwellings as tenement houses or apartment houses, hotels, pest houses, hospitals, sanitariums and institutions are included in the residence sections.

Business buildings cover factories, grain elevators, cold storage houses, ware houses, breweries, distilleries and slaughter houses, powder mills, oil refineries, office buildings, stores, garages, stables, and restaurants.

Upon completion of section four which deals with engineering requirements, a meeting of the general committee will be called with a view of formulating a method of procedure to be followed in the apportionment of the various sections to sub-committees for survey, constructive criticisms and recommendations.

The Building Code is the most comprehensive and pretentious draft of safety regulations that has been attempted by the Industrial Board and its Building Code Committee. It has required months of work and study of the new conditions confronting the building industry. The spurt in building operations at the present time has made rapid work necessary, and it is hoped the code will be completed before July so that hearings can be held and the code placed in operation.

STUDYING CONSTRUCTION METHODS

IMPORTANT work in studying construction equipment and methods will be undertaken this year by the Associated General Contractors. The success of this work will depend very largely upon the co-operation which contractors give the agents of the association whose task it will be to assemble the information. These men can, from their own experience, furnish only a small number of the facts which will be necessary as a basis for conclusions.

Information must be made available from all sections of the country so that variations due to climate, labor conditions, character of soil and the scores of other differences in conditions can be appraised and averaged. This means that contractors widely must contribute liberally from their records. As individual methods and costs will probably in no case be made public, the information given can be complete and candid without fear that business secrets may be revealed. Indeed, the information must be full and frank or the conclusions will be false.

That the contracting industry should determine preferred practices in equipping construction work and preferred methods of doing work does not admit of argument. Bidding prices will be stabilized, average quality of construction will be improved, but most important of all, the standing of the contractor as an expert in construction will be strengthened in the opinion of engineers and owners.

It may even be possible in some measure to approach standards. Obviously, however, standardization has to be attempted with caution. Nothing must be done that will discourage improvement in equipment and methods. Standardization may wisely be left until later.

—Engineering News Record.

To be poor in a wealthy country, to be sick in a good climate, to be inefficient among a progressive people, is a sign of unwise educational methods. Such people were not taught to battle with the world or meet life's emergencies.—Thoreau.

Waterproof Foundations
Foundations of all kinds—concrete, stone, brick—can be made absolutely water-tight. The Truscon method consists of simply using Truscon Waterproofing Paste in the mixing water. In this way, Truscon Paste confers powerful water-repellent properties to concrete, cement stucco and plaster.
Easy to use; costs but little; positive and dependable in its waterproofing results.

DISTINGUISHING CHARACTERISTICS OF MAHOGANY

Only true mahogany from tropical America, "African mahogany," and "Philippine mahogany" are commonly sold as mahogany in this country, but at various times over 60 different species of timber have been sold under that name. Although all of these species resemble each other in varying degrees, tropical American mahogany and "African mahogany" possess one important characteristic in common. This is the occurrence of dark amber-colored gum in many of the pores. The gum does not fill the pores but is recognized as dark specks or streaks in the pores as seen on end or side grain. This gum is barely visible to the naked eye, but is easily seen through a hand lens with a magnification of 10-15 diameters. In preparing the end grain of the wood for examination, a very sharp knife should be used to make a smooth cut.

Some other woods have similar dark masses of gum in the pores, but none of these are commonly substituted for mahogany. Among them are crabwood and sapeli, species imported from South America in small quantities only, and the Cedrelas (Spanish cedar, etc.), which are rarely sold as mahoganies, and are easily recognized by their odor.

True mahogany has fine, continuous, concentric lines on the cross section usually from ⅛ to ½ inch apart, which distinguish it from "African mahogany" in which these lines never occur.

"Philippine mahogany," although not marked by the black masses of gum, is distinguished from true mahogany and other so-called mahoganies by the presence of fine, white, tangential lines ⅛ inch to several inches apart, readily visible to the naked eye, and showing under a lens as rows of small openings filled with a white substance.

A more complete key and description of mahogany and so-called mahogany, which describes common species in detail, may be obtained from the Forest Products Laboratory.

THE YELLOW STAIN ON HARDWOOD

A troublesome defect often found in hardwood lumber is that recognized as yellow stain. It is usually distinguished by a pale yellow color, occurs generally in streaks, and is detected most easily when the wood is surfaced, although at times it is present without any discoloration of the wood. Its first symptom may be a moldy appearance of the wood. Yellow stain has been observed by the Forest Products Laboratory in hickory and maple tool handles, in birch veneer, and in oak airplane propellers and wheel spokes. It is classified in the *Pencillium divaricatum* group of fungi, and resembles one of the fungi which damage wood pulp.

The only damage that yellow stain is positively known to do is to mar the appearance of the finished product, since it usually penetrates the wood so deeply that it can not be surfaced off. It is probable, however, that the fungus actually weakens the wood, and the use of yellow-stained lumber for airplane construction or similar purposes where strength is important is to be discouraged until more is known about the action of the fungus on wood structure.

Lumber can be protected from attack of the yellow-stain fungus by seasoning the stock without delay after it is cut, storing it in a dry place, or treating it with preservatives.

It is surely an injustice to your workmen as well as a source of loss to yourself to supply poor tools in your shop equipment. No man can do anything approaching good work with tools that take the edge off enthusiasm. In shop management, as in most things, details are the whole cloth Tools are like men. They do good work or they do not, according to the character which they possess. Character in tools is a matter of good materials, expert making and correct design.

We'll *write* your advertising without charge. All we ask is that you pay for the space and provide our ad. man with the necessary selling pointers.

Business is founded on reciprocity and co-operation. Any other plan than this spells bankruptcy. The successful business nowadays has a heart and a soul.

Many a man would do a better job if he didn't know about putty.—Ex.
